Subject: PGA Roundtable
Attachments: executive summary sample.doc; summary.xls

As a follow-up to the comments I made at the roundtable last Friday, attached is an example of what I would be willing to provide in conjunction with my suggestion that the requirements for the executive summary referenced in proposed 4 CSR 240-3.242 be modified to eliminate the standardized reporting of hedging data (Exhibit II) and to allow each LDC the flexibility to structure such summary according to its own gas supply cost configuration. All of the underlying calculations that accompany the narrative already appear in the workpapers I routinely provide. Hopefully, this kind of recap would aid Staff in having a better understanding as to what's driving our PGA changes without creating an additional reporting burden on the LDCs.
