Direct Testimony of
Scott D. Clark

- 1 • Case No. GM-2005-0136 In the matter of the Application for authority of Sendero
- 2 SMGC LP Acquisition Company, and Sendero SMGC GP Acquisition Company to
- 3 purchase the partnership interests of DTE Enterprises, Inc. and DET Ozark, Inc
- 4 • Case No. WO-2005-0206 In the Matter of the Joint Application of Silverleaf Resort,
- 5 Inc. and Algonquin Water Resources of Missouri, LLC for Authority for Silverleaf
- 6 Resorts, Inc. to Sell Certain Assets to Algonquin Water Resources of Missouri, LLC
- 7 • Case No. WR-2006-0091 In the matter of Stockton Hills Water Company small
- 8 company rate increase.
- 9 • Case No. QS-2006-0001 In the matter of Hickory Hills Water & Sewer Company
- 10 small company rate increase.

11 **EXECUTIVE SUMMARY**

12 Q. Please provide a summary of each of the items you will be sponsoring.

13 A. An analysis of Cash Working Capital was done by performing a lead/lag
14 study. Each of the major expenses was evaluated to determine a reasonable expense lag.
15 The revenue lead was used from the previous case. The net of the expense lag and revenue
16 lead resulted in a negative cash working capital requirement. This means that the ratepayers
17 supplied the cash working capital during the year. A reduction to rate base was made to
18 account for this.

19 Maintenance expense was normalized by performing a 3-year average for Aquila
20 Networks-MPS (MPS) and a 5-year average for Aquila Networks-L&P (L&P). In an effort
21 to remove the volatility of fluctuating levels of yearly maintenance expense, MPS and L&P
22 were evaluated separately. It was determined that using a 3-year average for MPS and a

Direct Testimony of
Scott D. Clark

1 5-year average for L&P most accurately reflected the level of maintenance expense that will
2 occur on an ongoing basis.

3 Turbine overhaul maintenance was normalized by comparing the accrual for each
4 turbine to its actual overhaul maintenance costs. An appropriate level of overhaul
5 maintenance costs were determined by dividing the last major outage costs by the number of
6 years expected between overhauls. An adjustment was made to account for the difference
7 between the actual annual turbine overhaul maintenance expense and the annual accrual.

8 Advertising expenses were adjusted to restate test year levels to reflect only the
9 allowable portion of advertising expense. Only advertising that is considered useful in the
10 provision of adequate service (General) and advertising that conveys the ways to use the
11 Company's service safely and to avoid accidents (Safety) was included for advertising
12 expenses.

13 Dues and donations were excluded from the cost of service.

14 Injuries and damages were normalized by reflecting a 36-month average of actual
15 claim payouts. A period of 36-months was used to best smooth the effect of annual
16 fluctuations in actual payouts.

17 Insurance was annualized based on the most current insurance premiums available
18 through the end of the test year update period.

19 Miscellaneous test year adjustments were made to reflect the
20 removals/reclassifications of various test year accounts that the Company made and Staff
21 agreed with.

PURPOSE OF TESTIMONY

Q. With reference to Case No. ER-2005-0436, have you made an examination of the books and records of Aquila Networks-MPS (MPS) and Aquila Networks-L&P (L&P), divisions of Aquila, Inc (Aquila or Company)?

A. Yes, I have, in conjunction with other members of the Commission Staff (Staff).

Q. What are your areas of responsibility in regard to Case No. ER-2005-0436?

A. I will be sponsoring the areas of cash working capital, maintenance expense, turbine overhaul expense, advertising expense, dues and donations expense, insurance expense, injuries and damages expense, and miscellaneous test year adjustments.

Q. Will your testimony be addressing MPS electric and L&P electric?

A. Yes, my testimony will address the areas I previously identified and relate specifically to the electric operations of MPS and electric operations of L&P (the former St. Joseph Light & Power Company). L&P was acquired and merged with Aquila December 31, 2000.

Q. What knowledge, skill, experience, training or education do you have in regulatory matters?

A. Since commencing employment with the Commission, I have attended various in-house training seminars and have reviewed in-house training materials. I worked on two small water and sewer cases, which have provided a strong basis in the ratemaking process and an in-depth understanding on certain issues. I have also worked closely with senior auditors and supervisors, whom possess extensive regulatory knowledge.

Q. Are you sponsoring any accounting schedules in this case?

Direct Testimony of
Scott D. Clark

1 A. Yes. I am sponsoring Accounting Schedule 8, Cash Working Capital.

2 Q. Please identify which adjustments you are sponsoring in this case.

3 A. I am sponsoring the following Income Statement adjustments for MPS
4 electric:

5 Maintenance Expense: S-16.9, S-17.9, S-18.9, S-19.9, S-20.9, S-26.9,
6 S-27.9, S-28.9, S-29.1, S-42.9, S-43.1, S-44.9, S-45.9, S-47.9, S-59.1,
7 S-60.9, S-62.9, S-63.9, S-64.9, S-65.9, S-66.9;

8 Turbine Overhaul: S-19.10, S-28.10;

9 Advertising Expense: S-34.10, S-36.9, S-54.10, S-65.10, S-72.10,
10 S-73.10, S-75.9, S-76.10, S-77.1, S-78.2, S-79.10, S-81.9, S-87.1, S-
11 88.10, S-90.10;

12 Dues & Donations: S-13.9, S-33.9, S-34.9, S-35.9, S-40.9, S-48.9,
13 S-50.9, S-54.9, S-56.9, S-61.9, S-67.9, S-69.9, S-71.9, S-72.9, S-73.9,
14 S-76.9, S-78.9, S-79.9, S-80.9, S-82.9, S-88.9, S-89.9, S-90.9;

15 Insurance Expense: S-83.1, S-84.1;

16 Injuries & Damages: S-84.2, S-84.3; and

17 Misc. Test Year Adjustments: S-7.1, S-8.1, S-93.5.

18 I am sponsoring the following Income Statement adjustments for L&P electric:

19 Maintenance Expense: S-17.9, S-18.9, S-19.9, S-20.9, S-21.9, S-26.9,
20 S-27.9, S-28.9, S-42.9, S-43.9, S-44.9, S-45.9, S-57.1, S-58.9, S-59.9,
21 S-60.9, S-61.9, S-62.9, S-63.9, S-64.9;

22 Turbine Overhaul: S-20.10, S-27.10;

23 Advertising Expense: S-34.10, S-36.9, S-65.10, S-72.9, S-76.1, S-77.1,
24 S-78.10, S-79.10, S-81.10, S-87.2, S-88.10, S-90.9;

25 Dues & Donations: S-11.9, S-33.9, S-34.9, S-35.9, S-40.9, S-46.9,
26 S-52.9, S-54.9, S-59.10, S-65.9, S-67.9, S-69.9, S-73.9, S-75.9,
27 S-78.9, S-79.9, S-81.9, S-87.1, S-88.9, S-89.9;

28 Insurance Expense: S-82.1, S-83.1;

29 Injuries & Damages: S-83.2, S-83.3; and

30 Misc. Test Year Adjustments: S-7.1, S-8.2, S-88.12, S-94.14.

Direct Testimony of
Scott D. Clark

1 In addition to those adjustments, I am sponsoring the rate base components regarding Cash
2 Working Capital found on Accounting Schedule 2, which include the federal and state
3 income tax offset and the interest offset. The calculation of Cash Working Capital is found
4 on Schedule 8.

5 **CASH WORKING CAPITAL**

6 Q. What is Cash Working Capital (CWC)?

7 A. Within the confines of a rate case heard before this Commission, CWC is the
8 amount of cash necessary for a utility to pay the day-to-day expenses incurred to provide
9 utility services to its respective customers.

10 Q. How has Aquila's financial condition impacted Staff's analysis of CWC?

11 A. Aquila's financial condition was examined very closely to ensure that any
12 adverse effects of the Company's financial condition were not reflected in the calculation of
13 CWC.

14 Q. What types of adverse effects due to the Company's financial condition could
15 be reflected in the calculation of CWC?

16 A. As a result of the Company's poor credit ratings, some vendors now require
17 certain expenses, such as purchased power and fuel purchases, to be paid differently than
18 when Aquila was considered to be an investment grade company.

19 Q. How have these expenses been paid differently?

20 A. Because of Aquila's poor financial condition, methods such as prepayments,
21 early pays, letters of credit, and collateral have been required by concerned vendors. The
22 need to use different methods of payment have associated costs which impact the Company's
23 CWC needs.

Direct Testimony of
Scott D. Clark

1 Q. Can you please describe these different methods of payments?

2 A. Yes. When a vendor requires prepayments, the customer must pay, in
3 advance, for goods or services. Early pays are a type of accelerated payments. Early
4 payments are usually required to be paid after the goods or services are provided, but prior to
5 the normal due date shown on the invoice/bill. Letters of credit are usually issued by banks,
6 to the Company, which the company can present to third parties as proof of ability to pay.
7 There are usually fees involved with letters of credit. The use of collateral is a means by
8 which vendors hold cash, which is usually obtained by wired funds from the Company, as a
9 type of "insurance" to cover defaulted payments. These methods of payments are required
10 by some vendors when a customer is considered to be a poor credit risk. Staff's approach to
11 calculating CWC for this case is to mitigate, as much as possible, any adverse effects relating
12 to Aquila's financial condition.

13 Q. How long has Aquila's financial condition come into question?

14 A. Aquila first experienced financial difficulties in early 2002. Its financial
15 condition deteriorated after the collapse of Aquila's non-regulated operations. Much of the
16 information examined relating to the cash management of the company is impacted by its
17 financial condition. Because the adverse financial conditions were not related to the
18 regulated utility operations of Aquila, Staff spent a considerable amount of time determining
19 the appropriate CWC by removing the negative impact of the financial condition caused by
20 the non-regulated operations so that Aquila's utility customers would not be harmed.

21 Q. Where are the results of the Staff's CWC analysis?

22 A. The results of CWC is reflected on the Rate Base Accounting Schedule 2,
23 line 4 - Cash Working Capital. In addition to calculation of CWC on Schedule 8, there are

Direct Testimony of
Scott D. Clark

1 other off sets to rate base that are considered part of CWC. These additional CWC
2 components are show on line 8-Federal Tax Offset, line 9-State Tax Offset, line 10-City Tax
3 Offset and line 11-Interest Expense Offset on Schedule 2, Rate Base.

4 Q. Was a lead/lag study performed in this case?

5 A. Yes. The Staff performed a lead/lag study.

6 Q. Is the method you used to calculate MPS and L&P's CWC requirements the
7 same method the Staff has used in previous rate cases?

8 A. Yes. The lead/lag method has been used by the Staff and adopted by the
9 Commission in numerous rate proceedings dating back to the 1970s, including MPS's and
10 L&P's most recent rate cases (Case Nos. ER-2004-0034, GR-2004-0072 and
11 ER-2001-0672).

12 Q. What is the purpose of a lead/lag study?

13 A. The lead/lag study determines the amount of cash that is necessary on a day-
14 to-day basis for MPS and L&P to provide electric services to its customers. A lead/lag study
15 analyzes the cash flows related to the payments received from its customers for the provision
16 of electric services and the disbursements made by MPS and L&P to its suppliers and
17 vendors of goods and services necessary to provide this electric service. A lead/lag study
18 determines the number of days MPS and L&P has to make payments after receiving goods or
19 services from a vendor and is compared with the number of days it takes MPS and L&P to
20 receive payment for the electric service it provides to its customers. A lead/lag study also
21 determines who provides CWC.

22 Q. What are the sources of CWC?

23 A. The shareholders and ratepayers are the sources of CWC.

Direct Testimony of
Scott D. Clark

1 Q. How do shareholders supply CWC?

2 A. When MPS and/or L&P expend funds to pay for an expense before the
3 ratepayers provide the cash, the shareholders are the source of the funds. This cash
4 represents a portion of the shareholders' total investment in the MPS and/or L&P. The
5 shareholders are compensated for the CWC funds they provided by the inclusion of these
6 funds in rate base. By including these funds in rate base, the shareholders earn a return on
7 the funds they have invested.

8 Q. How do ratepayers provide CWC?

9 A. Ratepayers supply CWC when they pay for electric services received before
10 MPS and L&P pay expenses incurred to provide that service. Ratepayers are compensated
11 for the CWC they provide by reducing rate base by the amount of CWC the ratepayers
12 provide.

13 Q. How does the Staff interpret lead/lag study results?

14 A. A positive CWC requirement indicates that, in the aggregate, the shareholders
15 provided the CWC for the test year. This means that, on average, the utility paid the
16 expenses incurred to provide the electric service to its customers before those customers had
17 to pay the Company for the provision of utility service.

18 A negative CWC requirement indicates that, in the aggregate, the ratepayers provided
19 funds to the Company in advance of payments. This means that, on average, the ratepayers
20 paid for their electric services before the utility paid the expense incurred to provide those
21 services.

22 Q. Please explain the components of the Staff's calculation of CWC that appear
23 on Accounting Schedule 8.

Direct Testimony of
Scott D. Clark

1 A. The components of the Staff's calculation are as follows:

2 1) Column A (Account Description): lists the types of cash
3 expenses, which MPS and L&P pay on a day-to-day basis;

4 2) Column B (Test Year Expenses): provides the amount of
5 annualized expense included in the cost of service. It shows the dollars
6 associated with the items listed in Column A on an adjusted Missouri
7 jurisdictional basis;

8 3) Column C (Revenue Lag): indicates the number of days
9 between the midpoint of the provision of service by MPS and L&P and the
10 payment for the service by the ratepayer. The revenue lag addressed in this
11 case is discussed later in this direct testimony;

12 4) Column D (Expense Lag): indicates the number of days
13 between the receipt of and payment for the goods and services (i.e., cash
14 expenditures) used to provide service to the ratepayer. The expense lags
15 addressed in this case are discussed later in this direct testimony;

16 5) Column E (Net Lag): results from the subtraction of the
17 Expense Lag (Column D) from the Revenue Lag (Column C);

18 6) Column F (Factor): expresses the CWC lag in days as a
19 fraction of the total days in the test year. This is accomplished by dividing the
20 Net Lags in Column E by 365;

21 7) Column G (CWC Requirement): shows the average amount of
22 cash necessary to provide service to the ratepayer. This is computed by

Direct Testimony of
Scott D. Clark

1 multiplying the Test Year Expenses (Column B) by the CWC Factor
2 (Column F).

3 Q. Please describe the revenue lag.

4 A. The revenue lag is the amount of time between the days the MPS and L&P
5 divisions provide the service to customers, and when it receives payment from those
6 customers for that service. The overall revenue lag in this case is the sum of three
7 subcomponent lags. They are as follows:

8 1) Usage Lag: The midpoint of average time elapsed from the
9 beginning of the first day of a service period through the last day of that
10 service period;

11 2) Billing Lag: The period of time between the last day of the
12 service period, the day the meter is read, and the day the bill is placed in the
13 mail by the company;

14 3) Collection Lag: The period of time between the day the bill is
15 placed in the mail by the company and the day the company receives payment
16 from the ratepayer for services performed.

17 Q. Did MPS and L&P use the same three subcomponent lags discussed above in
18 developing its total revenue lag?

19 A. Yes. Staff's revenue lag subcomponents are identified below:

Direct Testimony of
Scott D. Clark

1		<u>Staff</u>
2	Usage Lag	15.21 days
3	Billing Lag	2.00 days
4	Collection Lag	<u>4.38 days</u>
5	Total	<u>21.59 days</u>

6 Q. Please explain how the usage lag was determined.

7 A. The usage lag was determined by dividing the number of days in a typical
8 year (365) by the number of months in a year (12) to yield the average number of days in a
9 month (30.42). The 30.42 was then divided by two to yield an average usage lag of
10 15.21 days. This further calculation using two as the divisor is necessary since MPS and
11 L&P bill monthly, and it is assumed that service is delivered to the customer evenly
12 throughout the month.

13 Q. Please explain the Staff's approach to determining the billing lag.

14 A. The billing lag is the time it takes between when MPS and L&P read the
15 meters and when the bills are subsequently mailed to the customer. Staff used the billing lag
16 from the previous Aquila rate case of two days.

17 Q. Please explain the Staff's approach to determining the collection lag.

18 A. The collection lag is the average number of days that elapse between the day
19 that the bills were mailed and the day when MPS and L&P receive payments for those bills.
20 The Staff used the collection lag from the two previous cases (Case Nos. ER-2004-0034 and
21 ER-2001-672) of 4.38 days. Staff's calculation of the collection lag will be addressed by
22 Staff witness Phillip K. Williams. The calculated total revenue lag was 21.59 days.

Direct Testimony of
Scott D. Clark

1 Q. What was the scope of the Staff's work in the calculation of expense lags in
2 this case?

3 A. The Staff calculated expense lags in areas where significant expenses were
4 involved, or in areas where significant changes in payment pattern occurred since previous
5 rate cases.

6 Q. What expense lags did the Staff calculate?

7 A. The Staff calculated the following expense lags in this audit: (1) payroll
8 expense; (2) federal, state and FICA taxes withheld; (3) federal and state unemployment
9 taxes; (4) Sibley coal and freight; (5) Jeffrey operations and fuel; (6) Iatan operations and
10 fuel; (7) Lake Road coal and freight; (8) city franchise taxes; (9) purchased power; (10) gas
11 and oil purchased; (11) property tax; (12) sales and use tax; and (13) corporate franchise tax.

12 Q. What expense lags, calculated by the Company, did the Staff accept?

13 A. Staff accepted expense lags for accrued vacation.

14 Q. What other expense lags did the Staff accept from the prior case?

15 A. The Staff did not recalculate the expense lag for cash vouchers. The Staff
16 believes that there were not sufficient changes to the accounts payable functions for
17 payments of these miscellaneous expenses to warrant the time and resources required to
18 perform a full cash voucher expense lag analysis. Staff also did not recalculate pension fund
19 payment and lease payment lags.

20 Q. Please describe the expense lag for cash vouchers as found on line 1 of
21 Accounting Schedule 8 for both MPS and L&P.

22 A. Cash vouchers are miscellaneous expenditures that do not coincide with other
23 operations and maintenance (O&M) expense items and that were not specifically examined

Direct Testimony of
Scott D. Clark

1 elsewhere in the CWC analysis study (e.g., payroll, fuel, etc.). The Staff used the lag that
2 was accepted in previous cases of 44.14 days.

3 Q. Please explain the expense lag for federal income withholding taxes and
4 Social Security payroll taxes collected under authority of the Federal Insurance Contributions
5 Act (FICA) found on lines 2, 4 and 18 of Accounting Schedule 8 for both MPS and L&P.

6 A. The expense lag for FICA and federal income withholding taxes relating to
7 payroll taxes is the period of time between the midpoint of the pay period for which the taxes
8 are withheld and the date the tax withholdings must be paid to the taxing authorities.
9 Payments for the employee's portion of FICA taxes and employer's portion of FICA taxes
10 are made at the same time. An employer must typically deposit the income tax withheld and
11 the FICA taxes with an authorized commercial bank depository or Federal Reserve Bank on
12 the Monday following the previous Friday payday. The resulting tax lags are 16.5 days.

13 Q. Please describe the expense lag for state withholding taxes as found on line 3
14 of Accounting Schedule 8 for both MPS and L&P.

15 A. The expense lag for the state withholding taxes is the period of time between
16 the midpoint of the pay period for which the taxes were withheld and the date that the tax
17 withholdings must be turned over to the taxing authorities. The lag for state withholding
18 taxes is 18.50 days.

19 Q. Please explain the payroll expense lag found on line 5 of Accounting
20 Schedule 8 for both MPS and L&P.

21 A. The payroll expense lag is the time lapse between the midpoint of the period
22 in which the employees earned wages and the date the Company paid the wages. Employees
23 are paid on the Friday following the two-week pay period, which ended on the previous

Direct Testimony of
Scott D. Clark

1 Friday. The payroll expense lag is 13.42 days. This is seven days, to the midpoint of the
2 14-day period, plus 6.42 days between the end of the pay period and the Friday pay date.

3 Q. Please explain the vacation expense lag found on line 6 of Accounting
4 Schedule 8 for both MPS and L&P.

5 A. The expense lag computation accounts for the time between the average date
6 the vacation is earned (i.e., the midpoint of the year) and the date when employees are
7 actually paid for vacation. The Company's employees are entitled to two weeks vacation at
8 the beginning of each calendar year, which is earned from the prior year. The Staff is
9 therefore using a vacation expense lag of 365 days.

10 Q. Please explain the expense lag for natural gas and oil on line 7 of Accounting
11 Schedule 8 for both MPS and L&P.

12 A. The natural gas and oil expense lag is the difference in days between the
13 midpoint of the period when the Company received natural gas or oil from its suppliers and
14 the date when the natural gas/oil deliveries are paid. The natural gas and oil expense lag is
15 40.79.

16 Q. Please explain the injuries and damages lag as found on line 9 of Accounting
17 Schedule 8 for both MPS and L&P.

18 A. A significant portion of injuries & damages claims were paid in multiple
19 installments. As a result, a weighted average lag was calculated between the reported date
20 and the mid point of each month which a specific payment was made. The injuries and
21 damages expense lag is 311.18 for MPS and 338.05 for L&P.

22 Q. Please explain the purchased power expense lag as found on line 10 of
23 Accounting Schedule 8 for MPS and L&P.

Direct Testimony of
Scott D. Clark

1 A. Purchased power expense lag is the difference in days between the midpoint
2 of the period when the Company received the purchased power and the date the Company
3 paid for the power. The purchased power expense lag is 36.42.

4 Q. Please explain the expense lag for Sibley coal and freight on line 11 of
5 Accounting Schedule 8 for MPS.

6 A. The Sibley coal and freight expense lag is the time lapse between the date the
7 coal and/or freight services were received and the date the Company paid for these goods
8 and/or services. The Sibley coal and freight expense lag is 20.03 days.

9 Q. Please explain the expense lag for Lake Road coal and freight on line 11 of
10 Accounting Schedule 8 for L&P electric.

11 A. The Lake Road coal and freight expense lag is the time lapse between the date
12 the coal and/or freight services were received and the date the Company paid for these goods
13 and/or services. The coal and freight expense lag for Lake Road is 20.02 days.

14 Q. Please explain the expense lag for Jeffrey fuel and operations found on
15 lines 12 and 13 of Accounting Schedule 8 for MPS electric.

16 A. The managing partner of the Jeffrey Energy Center (Jeffrey), a coal-fired
17 generating facility jointly owned by Aquila and Westar Energy, bills MPS bi-monthly
18 resulting in a time lapse between the midpoint of when services are provided and when MPS
19 pays for these services. The resulting lag is 30.62 days. The fuel and operations for Jeffrey
20 have been split into separate lines on Accounting Schedule 8 to clarify the types of expenses
21 incurred for Jeffrey. The lags are the same for both lines because of the manner in which the
22 managing partner bills.

Direct Testimony of
Scott D. Clark

1 Q. Please explain the expense lag for Iatan fuel and operations found on lines 12
2 and 13 of Accounting Schedule 8 for L&P electric.

3 A. The managing partner of the Iatan plant, Kansas City Power & Light
4 Company, bills L&P as expenditures are incurred for fuel and freight. L&P is also billed
5 monthly for operational fees. This results in two different lags based on the variation in
6 billings from the managing partner and the date payment was made for the services by L&P.
7 The lags are 30.16 days for fuel and 52.74 days operations.

8 Q. Please explain the expense lag associated with pension fund payment found
9 on line 14 of Accounting Schedule 8 for both MPS and L&P.

10 A. The pension fund payment lag is the number of days between the midpoint of
11 the calendar year and the date payment was made to the pension fund. Staff used the lag
12 from the previous case (Case No. ER-2004-0034) of 90 days.

13 Q. Please explain the expense lag associated with lease payments found on
14 line 15 of Accounting Schedule 8 for both MPS and L&P.

15 A. The lease payment lag is the difference between the midpoint of the service
16 and the date payment was made for that service. The Staff has used the lag from the previous
17 cases (Case Nos. ER-2004-0034 and ER-2001-0672) of 67.32 days.

18 Q. Please explain the expense lag associated with property taxes as found on
19 line 17 of Accounting Schedule 8 for both MPS and L&P.

20 A. The property tax payment lag is the weighted average number of days
21 between the midpoint of the calendar year and the statutory due date for each state that MPS
22 and L&P own property in. The property tax payment lag is 188.36 days for MPS and 182.52
23 days for L&P.

Direct Testimony of
Scott D. Clark

1 Q. Please explain the federal and state unemployment tax lags as found on
2 line 19 of Accounting Schedule 8 for both MPS and L&P.

3 A. Federal and state unemployment taxes (FUTA and SUTA, respectively) are
4 paid quarterly and are due at the end of the month following each quarter. The Staff's
5 calculation for FUTA and SUTA resulted in an expense lag of 86.82 days for MPS and 86.51
6 days for L&P.

7 Q. Please explain the corporate franchise tax lag found on line 20 of Accounting
8 Schedule 8 for both MPS and L&P.

9 A. Corporation franchise taxes are paid annually. The lag is the number of days
10 between the midpoint of the taxable period (calendar year) and the date the taxes are due to
11 be paid (April of the current year). The Staff determined a lag of negative 77.5 days for
12 corporate franchise tax.

13 Q. Please explain the city franchise tax lag found on line 21 of Accounting
14 Schedule 8 for both MPS and L&P.

15 A. City franchise taxes are remitted to each respective city either monthly,
16 semimonthly, quarterly, or semi-annually depending on the agreement between the city and
17 the Company. The lag is the weighted number of days between the taxable period and the
18 date that the taxes are due. The Staff calculated a lag of 98.20 days for MPS and 47.82 days
19 for L&P.

20 Q. Please explain the expense lags associated with sales and use taxes as found
21 on line 22 of Accounting Schedule 8 for both MPS and L&P.

Direct Testimony of
Scott D. Clark

1 A. The sales and use tax expense lag is the weighted number of days between the
2 taxable period and the date the taxes are due. The sales and use taxes lag was calculated at
3 35.68 days for MPS and 37.84 days for L&P.

4 Q. Why does the revenue lags for sales and use taxes differ from the revenue lags
5 discussed earlier?

6 A. The Company acts solely as an agent of the taxing authority in collecting sales
7 and use taxes from the ratepayer, and paying the proper institution on a timely basis. The
8 Company has not provided any service to the ratepayer associated with sales and use taxes.
9 Therefore, in order to match the same time frames for these components, the Staff adopted
10 the collection lag and used it as the revenue lag. As explained earlier, the Staff calculated a
11 4.38-day collection lag and used this number as the revenue lag for the sales and use tax lag.

12 Q. What components of CWC are not on Staff's Accounting Schedule 8?

13 A. The Federal Income Tax Offset, State Income Tax Offset and Interest Expense
14 Offset do not appear in the Accounting Schedule 8, CWC. These items appear as separate
15 line items in the Staff's Rate Base Schedule, Accounting Schedule 2.

16 Q. Why are the Federal Income Tax Offset, State Income Tax Offset, and Interest
17 Expense Offset included in the Rate Base Accounting Schedule, rather than the CWC
18 Accounting Schedule 8?

19 A. The normalized Missouri jurisdictional expense component used for these
20 offsets is tied directly to the computation of the revenue requirement. The revenue
21 requirement computer program (EMS run) has the capability to extract these amounts from
22 Accounting Schedule 11, Income Tax. The computer program applies the CWC factor to

Direct Testimony of
Scott D. Clark

1 each component and places the CWC requirement directly in Accounting Schedule 2, Rate
2 Base.

3 Q. Please explain and describe the inclusion of taxes in the Staff's analysis of
4 CWC.

5 A. Unlike other line items reflected within the CWC Accounting Schedule, taxes
6 are not considered as O&M expenses, but they are known and certain obligations of the
7 Company with payment periods and payment dates established by statutes. Rates paid by
8 customers to cover taxes payable represents a source of cash to the Company until passed on
9 to the appropriate taxing authority.

10 Q. Please explain the federal and state income tax offsets.

11 A. The federal and state income tax expense lags represent the period of time
12 between the midpoint of the tax or calendar year and the dates the income taxes must be paid
13 to the federal and state taxing authority. Currently, 100% of the estimated federal tax must
14 be paid during the year in four installments, which are due by the 15th day of April, June,
15 September and December. The state of Missouri requires that at least 90% of the Company's
16 estimated tax liability be paid during the year in four equal installments, which must be paid
17 by the 15th day of April, June, September, and December. Unlike the estimated federal tax
18 requirements, the remaining 10% tax liability is due by April 15th following the close of the
19 tax year. Because there have been no known changes to these payment dates, the Staff
20 accepted the lags used by the Company of 36.5 and 61.55 days for the federal and state
21 income tax lags, respectively. The CWC factor is placed in the Rate Base Accounting
22 Schedule, and the Staff's computer program calculated the CWC requirement for income
23 taxes.

Direct Testimony of
Scott D. Clark

1 Q. Please explain the Interest Expense offset.

2 A. Although not an O&M expense, interest expense is included in the Staff's
3 lead/lag analysis because interest is a source of cash provided by the ratepayer and, therefore,
4 properly considered in CWC. The Company has a known and certain obligation to pay cash,
5 in the form of interest on its debt. The interest is pre-collected through rates from the
6 ratepayer for the purpose of passing it on to the bondholder. The funds are a source of cash
7 to the Company for use toward any purpose that it desires until they are passed on to the
8 bondholder.

9 The expense lag for interest was computed by dividing the number of days in the year
10 by four. All Aquila's long-term debt bears semi-annual interest. The lag represents the
11 period of time between the midpoint of the semi-annual period, and the date interest paid.
12 The expense lag computed for interest is 91.25 days ($365 / 4$). The CWC factor was placed
13 in the Rate Base Accounting Schedule and the Staff's computer program calculated the CWC
14 requirement for interest.

15 Q. What was the overall result of the Staff's lead/lag calculation?

16 A. The lead/lag study performed by the Staff resulted in a negative CWC
17 requirement. This means that in the aggregate the ratepayer has provided the CWC to the
18 Company during the test year. Therefore, the ratepayer is compensated for the CWC that the
19 ratepayer provides, through a reduction to rate base. This rate base offset is shown on
20 Accounting Schedule 2.

21 **MAINTENANCE**

22 Q. Please explain adjustments S-16.9, S-17.9, S-18.9, S-19.9, S-20.9, S-26.9,
23 S-27.9, S-28.9, S-29.1, S-42.9, S-43.1, S-44.9, S-45.9, S-47.9, S-59.1, S-60.9, S-62.9, S-63.9,

Direct Testimony of
Scott D. Clark

1 S-64.9, S-65.9, and S-66.9 for MPS and S-17.9, S-18.9, S-19.9, S-20.9, S-21.9, S-26.9,
2 S-27.9, S-28.9, S-42.9, S-43.9, S-44.9, S-45.9, S-57.1, S-58.9, S-59.9, S-60.9, S-61.9, S-62.9,
3 S-63.9, S-64.9 for L&P.

4 A. The adjustments normalize non-payroll and maintenance expense for
5 production (FERC Uniform System of Accounts (USOA) 510-514 and 551-554),
6 transmission (Accounts 568-573) and distribution (Accounts 590-598) plant, respectively,
7 during the test year.

8 Q. What are normalization adjustments?

9 A. Normalization adjustments reflect the removal of events or items within the
10 test year that are non-recurring, or exhibit a fluctuation from the level, which would normally
11 be expected to occur. Normalization adjustments need to be made to the test year to achieve
12 the appropriate forward-looking focus of the investment/revenue/expense relationship.

13 Q. What is the investment/revenue/expense relationship?

14 A. This relationship is critical to the determination of the overall revenue
15 requirement. It is essential to keep the investment to serve customers on the same basis as
16 the revenues and expenses. As an example, the amounts of expense for maintenance are
17 normalized to ensure that an appropriate amount of costs is included in the rate structure so
18 the Company does not over-collect or under-collect expenses. The expenses are annualized
19 and normalized along with revenues so that the levels of sales in a given period have the
20 proper level of costs associated with those revenues. The Company must have the proper
21 level of plant investment to serve the customers that are providing the revenues for the
22 electric service. All the cost elements of utility operations are examined in a rate case and

Direct Testimony of
Scott D. Clark

1 amounts are determined keeping the timing consistent with test year and known and
2 measurable concepts.

3 Q. How did the Staff determine normalized maintenance expense for the test year
4 ended December 31, 2004?

5 A. After removing turbine overhaul accrual costs for production maintenance,
6 and Company payroll costs for production, transmission, and distribution maintenance, a
7 60-month average, calendar years 2000 through 2004 was calculated for non-payroll
8 production, transmission, and distribution accounts for L&P. After removing turbine accrual
9 costs for MPS's production maintenance, a 36-month average, calendar years 2002 through
10 2004 was calculated for non-payroll production, transmission, and distribution maintenance
11 accounts for MPS's electric operations. The adjustments restate the test year 2004 results to
12 reflect the average costs described above.

13 Q. Why was a three-year average used for MPS while a five-year average was
14 used for L&P.?

15 A. I observed the trends in the fluctuations of balances for each applicable
16 maintenance account. To best smooth the volatility in the yearly balances, a five-year
17 average was used for MPS and a three-year average was used for L&P.

18 Q. Why was payroll removed prior to calculating the average of maintenance
19 expense?

20 A. Payroll is annualized separately in the ratemaking process. Therefore, any
21 payroll costs recorded in the maintenance accounts must be removed to avoid double
22 counting of such payroll costs. Staff witness Lesley Preston will be sponsoring the Staff's
23 payroll adjustments in this case

Direct Testimony of
Scott D. Clark

1 Q. Why was the turbine overhaul accruals removed from the non-payroll
2 production maintenance analysis prior to calculating the normalized level of production
3 maintenance?

4 A. The normalized level of turbine overhaul maintenance has been calculated
5 separately because major overhauls on the large coal units, for example, only occur every six
6 or seven years.

7 **TURBINE OVERHAUL MAINTENANCE**

8 Q. Please explain adjustments S-20.10, S-27.10 for L&P and S-19.10, S-28.10
9 for MPS.

10 A. These adjustments are made to normalize the turbine overhaul accrual.

11 Q. What is the purpose of the accrual for major turbine overhaul maintenance?

12 A. Major turbine overhauls occur every six or seven years for the large coal units.
13 The accrual spreads the cost on the income statement over the six or seven year time frame.

14 Q. How was the turbine overhaul maintenance adjustment calculated?

15 A. The actual costs for major turbine overhauls were provided for each of the
16 MPS and L&P generating units. The frequency for a major turbine overhaul for the base-
17 load coal units is six to seven years. The historical costs for the turbine overhauls were
18 divided by six or seven years to determine the annual cost to be recovered in rates.

19 The MPS peaking units incur three types of major maintenance, each of which has a
20 different time interval. Due to the lack of actual historical maintenance costs, for all three
21 types of major maintenance, the annual level of maintenance expense was determined
22 differently than the method used for base load coal units. The historical costs for major

Direct Testimony of
Scott D. Clark

1 maintenance on each of these units were provided for the period from May, 1999 through
2 June 30, 2005. An average cost per year was developed based upon this data. The 2004 test
3 year was adjusted to reflect the average annual cost for these units.

4 **ADVERTISING EXPENSE**

5 Q. Please explain adjustments MPS S-34.10, S-36.9, S-54.10, S-65.10, S-72.10,
6 S-73.10, S-75.9, S-76.10, S-77.1, S-78.2, S-79.10, S-81.9, S-87.1, S-88.10, S-90.10 and
7 L&P—Electric- S-34.10, S-36.9, S-65.10, S-72.9, S-76.1, S-77.1, S-78.10, S-79.10, S-81.10,
8 S-87.2, S-88.10 and S-90.9;

9 A. These adjustments restate the test year advertising levels to reflect allowable
10 expense.

11 Q. Please explain the history of such adjustments before the Commission.

12 A. As part of Re: Kansas City Power and Light Company, 28 MO P.S.C. (N.S.)
13 228 (1986) (KCPL), the Commission adopted an approach that classifies advertisements into
14 five categories and provides separate rate treatment for each category. The five categories of
15 advertisements recognized by the Commission for purposes of this approach are:

- 16 1. General: advertising that is useful in the provision of adequate
17 service;
- 18 2. Safety: advertising that conveys the ways to use the
19 Company's service safely and to avoid accidents;
- 20 3. Promotional: advertising that encourages or promotes the use
21 of the particular commodity the utility is selling;

1 4. Institutional: advertising that seeks to improve or retain the
2 Company's public image;

3 5. Political: advertising which is associated with political issues.

4 The Commission adopted these categories of advertisements because it believed that
5 a utility's revenue requirement should: 1) always include the reasonable and necessary cost
6 of general and safety advertisements; 2) never include the cost of institutional or political
7 advertisements; and 3) include the cost of promotional advertisements only to the extent that
8 the utility can provide cost-justification for the advertisement (KCPL, pp. 269-271).

9 Q. What standard did the Staff use to evaluate the Company's advertising
10 expense in this case and to develop the adjustments?

11 A. The Staff used the standards as initially established in the KCPL case
12 identified above, and utilized in subsequent cases, to determine the test year level of
13 advertising expense for the general, safety, institutional, promotional and political categories
14 of advertising. The Staff proposes to disallow advertisements that are institutional,
15 promotional, unrelated to the electric industry or ask for charitable donations. The Staff
16 allowed all general and safety-related advertisements to the extent that they were related to
17 the electric industry and beneficial to Missouri electric ratepayers.

18 Q. Has the Company provided the Staff with copies of all test year
19 advertisements that were charged/allocated to MPS and L&P ratepayers in this proceeding?

20 A. Yes, the Company has provided all advertisements charged/allocated to MPS
21 and L&P ratepayers per Staff Data Request No. 164.

22 Q. How did the Staff treat these advertisements for rate purposes?

Direct Testimony of
Scott D. Clark

1 A. The Staff allowed all general and safety-related advertisements to the extent
2 that they were related to the electric industry and beneficial to Missouri electric ratepayers.
3 The Staff disallowed all advertisements identified by the Company as safety or general, but
4 which the Staff believes are institutional, promotional, or unrelated to the electric industry, as
5 well as advertisements that could not be identified by the Staff.

6 Q. How did Staff determine which advertisements should be allowed in rates?

7 A. Staff reviewed the advertisements provided by the Company and made a
8 determination based on the criteria identified by the Commission in the KCPL case as to the
9 type and nature of the advertising. Any advertising considered to be institutional,
10 promotional or of a political nature was disallowed from the test year amounts.

11 Q. Did the Company provide the Staff with any advertisements of a political
12 nature?

13 A. No. The Company did not submit to the Staff any advertisements of a
14 political nature.

15 **DUES AND DONATIONS**

16 Q. Please explain adjustments MPS— S-13.9, S-33.9, S-34.9, S-35.9, S-40.9,
17 S-48.9, S-50.9, S-54.9, S-56.9, S-61.9, S-67.9, S-69.9, S-71.9, S-72.9, S-73.9, S-76.9, S-78.9,
18 S-79.9, S-80.9, S-82.9, S-88.9, S-89.9, S-90.9 and L&P—Electric-S-11.9, S-33.9, S-34.9,
19 S-35.9, S-40.9, S-46.9, S-52.9, S-54.9, S-59.10, S-65.9, S-67.9, S-69.9, S-73.9, S-75.9,
20 S-78.9, S-79.9, S-81.9, S-87.1, S-88.9 and S-89.9.

21 A. These adjustments decrease test year expenses relating to various dues the
22 Company has included in its cost of service. The Staff has excluded such dues and donations

Direct Testimony of
Scott D. Clark

1 because they are not necessary for the provision of safe and adequate service, and thus do not
2 provide any direct benefit to ratepayers.

3 Q. Did the Company book any charitable donations above-the-line?

4 A. No. The Company did not book any charitable donation expenses above-the-
5 line in this case so no amounts are included in the cost of service levels relating to the
6 revenue requirement Staff is recommending in this case.

7 **INJURIES AND DAMAGES**

8 Q. Please describe adjustments MPS— S-84.2, S-84.3 and L&P--Electric S-83.2,
9 S-83.3.

10 A. These adjustments normalize injuries and damages expense by reflecting a
11 36-month average of actual claims payments. The adjustment amount is the difference
12 between the actual average of payments and the test year accrued provision for injuries and
13 damages.

14 Q. Why has the Staff used a 36-month average of actual payments?

15 A. Actual payments for injuries and damages normally fluctuate from year to
16 year. The Staff believes that a 36-month average will smooth the effect of these annual
17 fluctuations.

18 Q. Please define the 36-month period used by the Staff.

19 A. The 36-month period is the time period from January 1, 2002, to
20 December 31, 2004.

Direct Testimony of
Scott D. Clark

1 **INSURANCE**

2 Q. Explain adjustments MPS— S-83.1, S-84.1 and L&P—Electric- S-82.1,
3 S-83.1.

4 A. These adjustments annualize insurance expense based on the most current
5 insurance premiums available through the end of the test year update period.

6 **MISCELLANEOUS TEST YEAR ADJUSTMENTS**

7 Q. Explain adjustments MPS- S-7.1, S-8.1, S-93.5 and L&P-Electric S-7.1, S-8.2,
8 S-88.12, S-94.14.

9 A. These adjustments remove/reclassify miscellaneous test year revenue accounts
10 to reflect various adjustments made in company workpapers MPS-CS-83.3, 83.5 and
11 L&P-CS-83.3, 83.5, 83.6.

12 Q. Does this conclude your direct testimony?

13 A. Yes, it does.
