TO: Eric Logan
Global Account Manager
SBC Federal Solutions
500 E. 8th Street, Room 1276
Kansas City, MO 64106

Dear Mr. Logan,

The General Services Administration, a federal government agency, on behalf of National Geospatial-Intelligence Agency (NGA), will require new ISDN-PRI telephone service from SBC at 3200 S. 2nd Street, St. Louis, Missouri. This service will be required to support a new PBX system that has been ordered by NGA and is planned for installation on February 3, 2006. We are requesting that SBC provide a block of 10,000 consecutive DID telephone numbers, an entire prefix, to meet the needs of this customer. It is necessary that the DID numbers be a consecutive block of 10,000 numbers due to compatibility with our Defense Switched Network that provides dialing to other Department of Defense sites worldwide. It is our understanding from SBC that there are no available telephone numbers to meet our request for service. However, we understand that until recently, SBC had available the entire 314/676 prefix, but that most of this prefix was inadvertently returned to NeuStar. SBC is our chosen service provider and we understand that they might escalate to the state utility commission.

It is important that we know whether these numbers will be made available as soon as possible as this impacts the transition to the new telephone system at NGA.

Thank you for your prompt attention to this request.

Sincerely,

//S//

Kenneth Melvin
