**DIRECT TESTIMONY  
OF  
ANN E. BULKLEY  
FILE NO. ER-2022-0337**

1 **I. Introduction**

2 **Q: Please state your name, occupation and business address.**

3 A: My name is Ann E. Bulkley. I am a Principal with The Brattle Group (“Brattle”). My  
4 business address is One Beacon Street, Suite 2600, Boston, Massachusetts 02108.

5 **Q: On whose behalf are you submitting this Prepared Direct Testimony?**

6 A: I am submitting this testimony on behalf of Ameren Missouri (the “Company”), a  
7 wholly-owned subsidiary of Ameren Corporation (“Ameren”).

8 **Q: Please describe your background and professional experience in the energy  
9 and utility industries.**

10 A: I hold a Bachelor’s degree in Economics and Finance from Simmons College and a  
11 Master’s degree in Economics from Boston University, with over 25 years of  
12 experience consulting to the energy industry. I have advised numerous energy and  
13 utility clients on a wide range of financial and economic issues with primary  
14 concentrations in valuation and utility rate matters. Many of these assignments have  
15 included the determination of the cost of capital for valuation and ratemaking  
16 purposes. A summary of my professional and educational background is presented  
17 in Schedule AEB-D1.

1 **Q: What is the purpose of your Prepared Direct Testimony?**

2 A: The purpose of my testimony is to present evidence and provide a recommendation  
3 regarding the appropriate return on equity (“ROE”)<sup>1</sup> for Ameren Missouri to be used  
4 for ratemaking purposes. My analyses and recommendations are supported by the  
5 data presented in Schedule AEB-D2, Attachments 1 through 12, which were  
6 prepared by me or under my direction.<sup>2</sup>

7 **Q: How is the remainder of your Prepared Direct Testimony organized?**

8 A: The remainder of my testimony is organized as follows:

- 9 • Section II provides a summary of my analyses and conclusions.
- 10 • Section III reviews the regulatory guidelines pertinent to the development  
11 of the cost of capital.
- 12 • Section IV discusses current and projected capital market conditions and  
13 the effect of those conditions on the Company’s cost of equity.
- 14 • Section V explains my selection of the proxy group of electric utilities.
- 15 • Section VI describes my analyses and the analytical basis for the  
16 recommendation of the appropriate ROE for the Company.
- 17 • Section VII provides a discussion of specific regulatory, business, and  
18 financial risks that have a direct bearing on the ROE to be authorized for  
19 the Company in this case.

---

<sup>1</sup> Throughout my Direct Testimony, I interchangeably use the terms “ROE” and “cost of equity.”

<sup>2</sup> My testimony and supporting analyses rely, in part, on information obtained through a subscription with S&P Capital IQ Pro, and consequently, that information has been designated as confidential in accordance with licensing requirements of the provider.

- Section VIII presents my conclusions and recommendations for the market cost of equity.

## 1 **II. Summary Of Analyses And Conclusions**

2 **Q: What are the key factors considered in your analyses and upon which your**  
3 **recommended cost of equity for the Company is based?**

4 A: In developing my recommended ROE for the Company, I considered the following:

- 5 • The United States Supreme Court decisions in *Hope* and *Bluefield*<sup>3</sup>  
6 established the standards for determining a fair and reasonable authorized  
7 ROE for public utilities, including consistency of the allowed return with the  
8 returns of other businesses having similar risk, adequacy of the return to  
9 provide access to capital and support credit quality, and the requirement  
10 that the result lead to just and reasonable rates.
- 11 • The effect of current and projected capital market conditions on investors'  
12 return requirements.
- 13 • The results of several analytical approaches that provide estimates of the  
14 Company's cost of equity.
- The Company's regulatory, business, and financial risks relative to the  
proxy group of comparable companies, and the implications of those risks.

15 **Q: How did you develop your recommended cost of equity for the Company?**

16 A: I relied on the results of several analytical approaches to estimate the costs of equity  
17 for Ameren Missouri. To develop my ROE recommendation, I first developed a proxy

---

<sup>3</sup> Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591 (1944) ("Hope"); Bluefield Waterworks & Improvement Co., v. Public Service Commission of West Virginia, 262 U.S. 679 (1923) ("Bluefield").

1 group that consists of electric utility companies that face risks generally comparable  
2 to those faced by Ameren Missouri. To that electric company proxy group, I applied  
3 the Constant Growth Discounted Cash Flow (“DCF”) model, the Capital Asset  
4 Pricing Model (“CAPM”), the Empirical Capital Asset Pricing Model (“ECAPM”), and  
5 the Risk Premium approach. As discussed in more detail herein, it is appropriate to  
6 rely on multiple ROE methodologies because market conditions affect the  
7 assumptions used in each model differently. Therefore, the use of multiple ROE  
8 estimation models is beneficial to provide benchmarks and a range of results to  
9 consider.

10 My recommendations also consider company-specific business and financial risk  
11 factors to estimate the investor-required cost of equity for the Company. Although  
12 the companies in my proxy group are generally comparable to Ameren Missouri,  
13 each company is unique, with no two having exactly the same risk profiles.  
14 Accordingly, while I did not make any specific adjustments to my ROE estimates for  
15 any of these factors, I considered the Company’s business and financial risk in the  
16 aggregate in comparison to that of the proxy group companies when determining  
17 where the Company’s ROE falls within the reasonable range of analytical results to  
18 account for any residual differences in risk.

19 **Q: What are the results of your ROE estimation models?**

20 A: Figure 1 summarizes the range of results of my cost of equity analyses for the  
21 Company.

**FIGURE 1: SUMMARY OF COST OF EQUITY ANALYTICAL RESULTS**

<b>Constant Growth DCF</b>			
	Minimum Growth Rate (Median)	Average Growth Rate (Median)	Maximum Growth Rate (Median)
30-Day Average	8.11%	9.34%	10.38%
90-Day Average	8.09%	9.37%	10.37%
180-Day Average	8.21%	9.41%	10.53%
Constant Growth Average	8.14%	9.37%	10.43%
<b>CAPM</b>			
	Current 30-day Average Treasury Bond Yield	Near-Term Blue Chip Forecast Yield	Long-Term Blue Chip Forecast Yield
Value Line Beta	11.65%	11.73%	11.73%
Bloomberg Beta	11.20%	11.30%	11.31%
Long-term Avg. Beta	10.47%	10.61%	10.62%
<b>ECAPM</b>			
Value Line Beta	11.97%	12.03%	12.03%
Bloomberg Beta	11.64%	11.71%	11.72%
Long-term Avg. Beta	11.09%	11.19%	11.20%
<b>Bond Yield Plus Risk Premium</b>			
	Current 30-day Average Treasury Bond Yield	Near-Term Blue Chip Forecast Yield	Long-Term Blue Chip Forecast Yield
Risk Premium Results	10.03%	10.27%	10.29%

1 As shown in Figure 1, the range of results produced by the ROE estimation models  
2 is wide. While it is common to consider multiple models to estimate the cost of  
3 equity, it is particularly important when the range of results varies considerably  
4 across methodologies. As a result, my ROE recommendation considers the range  
5 of results of analyses, as well as the company-specific risk factors and current and  
6 prospective capital market conditions expected during the time when rates set in this  
7 case would be in effect.

1 **Q: What is your recommended ROE for Ameren Missouri?**

2 A: Based on the analytical results presented in Figure 1, the current and projected  
3 capital market conditions, and the level of regulatory, business, and financial risk  
4 faced by Ameren Missouri's electric operations relative to the proxy group, I  
5 conclude that a ROE in the range of 9.90 to 11.25 percent is reasonable. In addition,  
6 the required ROE is a forward-looking estimate of the return required to attract  
7 capital on reasonable terms. Therefore, the analyses supporting my  
8 recommendation rely on forward-looking inputs and assumptions (e.g., projected  
9 growth rates in the DCF model and a forecasted risk-free rate and market risk  
10 premium in the three risk premium analyses). Considering these factors, I conclude  
11 that the Company's requested ROE in this proceeding of 10.20 percent is  
12 reasonable.

### 13 **III. Regulatory Guidelines**

14 **Q: Please describe the guiding principles used in establishing the cost of capital**  
15 **for a regulated utility.**

16 A: The United States Supreme Court's *Hope* and *Bluefield* cases established the  
17 standards for determining the fairness or reasonableness of a utility's allowed ROE.  
18 Among the standards established by the Court in those cases are: (1) consistency  
19 with other businesses having similar or comparable risks; (2) adequacy of the return  
20 to support credit quality and access to capital; and (3) that the result, as opposed to

1 the methodology employed, is the controlling factor in arriving at just and reasonable  
2 rates.<sup>4</sup>

3 **Q: Is fixing a fair rate of return just about protecting the utility's interests?**

4 A: No. As the court noted in *Bluefield*, a proper rate of return not only assures  
5 "confidence in the financial soundness of the utility and should be adequate, under  
6 efficient and economical management, to maintain and support its credit [but also]  
7 enable[s the utility] to raise the money necessary for the proper discharge of its  
8 public duties."<sup>5</sup> As the Court went on to explain in *Hope*, "[t]he rate-making process  
9 ... involves balancing of the investor and consumer interests."<sup>6</sup>

10 **Q: Has the Missouri Public Service Commission ("Commission") provided**  
11 **similar guidance in establishing the appropriate return on common equity?**

12 A: Yes. The Commission follows the precedents of the *Hope* and *Bluefield* cases and  
13 acknowledges that utility investors are entitled to a fair and reasonable return. This  
14 position was set forth by the Commission as follows:

15 The standard for rates is "just and reasonable," a standard founded  
16 on constitutional provisions, as the United States Supreme Court has  
17 explained. But the Commission must also consider the customers.  
18 Balancing the interests of investor and consumer is not reducible to  
19 a single formula, and making pragmatic adjustments is part of the  
20 Commission's duty. Thus, the law requires a just and reasonable  
21 end, but does not specify a means. The Commission is charged

---

<sup>4</sup> *Hope*, 320 U.S. 591 (1944); *Bluefield*, 262 U.S. 679 (1923).

<sup>5</sup> *Bluefield*, 262 U.S. 679, 67 L Ed 1176 (1923).

<sup>6</sup> *Hope*, 320 U.S. 591, 603 (1944).

1 approving rate schedules that are as “just and reasonable” to  
2 consumers as they are to the utility.<sup>7</sup>

3 Based on these standards, the authorized ROE should provide the Company with a  
4 fair and reasonable return and should provide access to capital on reasonable terms  
5 in a variety of market conditions.

6 **Q: Why is it important for a utility to be allowed the opportunity to earn an ROE**  
7 **that is adequate to attract capital at reasonable terms?**

8 A: A return that is adequate to attract capital at reasonable terms will enable the  
9 Company to continue to provide safe, reliable electric service while maintaining its  
10 financial integrity. That return should be commensurate with returns required by  
11 investors elsewhere in the market for investments of comparable risk. If it is lower,  
12 debt and equity investors will seek alternative investment opportunities for which the  
13 expected return reflects the perceived risks, thereby impairing the Company’s ability  
14 to attract capital at reasonable cost. To the extent the Company is provided a  
15 reasonable opportunity to earn a market-based cost of capital, neither customers  
16 nor shareholders are disadvantaged.

17 **Q: Is a utility’s ability to attract capital also affected by the ROEs that are**  
18 **authorized for other utilities?**

19 A: Yes. Utilities compete directly for capital with other investments of similar risk, which  
20 include other natural gas and electric utilities. Therefore, the ROE authorized for a

---

<sup>7</sup> *In the Matter of Kansas City Power & Light Company’s Request for Authority to Implement a General Rate Increase for Electric Service*, File No. ER-2014-0370, Report and Order, September 15, 2015, at 11.

1 utility sends an important signal to investors regarding whether there is regulatory  
2 support for financial integrity, dividends, growth, and fair compensation for business  
3 and financial risk. The cost of capital represents an opportunity cost to investors. If  
4 higher returns are available for other investments of comparable risk, investors have  
5 an incentive to direct their capital to those investments. Thus, an authorized ROE  
6 significantly below authorized ROEs for other electric utilities can inhibit the utility's  
7 ability to attract capital for investment in Missouri.

8 **Q: Are the authorized ROE and capital structure important to credit rating**  
9 **agencies?**

10 A: Yes. The credit rating agencies consider the authorized ROE and equity ratio for  
11 regulated utilities to be very important for two reasons: (1) they help determine the  
12 cash flows and credit metrics of the regulated utility; and (2) they provide an  
13 indication of the degree of regulatory support for credit quality in the jurisdiction. The  
14 credit rating agencies are particularly focused on these metrics and have instituted  
15 negative ratings actions in reaction to regulatory commission decisions authorizing  
16 a cost of equity that is deemed to increase risk by reducing future cash flow.

17 For example, most recently, changes made by the Arizona Corporation Commission  
18 ("ACC") to an Administrative Law Judge's recommended order in an Arizona Public  
19 Service Company ("APS") rate proceeding caused credit rating agencies to institute  
20 negative ratings actions. Specifically, the ACC reduced the authorized ROE for APS  
21 from the ALJ-recommended 10.00 percent to 8.70 percent. With this reduction by  
22 the ACC, Fitch downgraded the issuer default credit rating of APS from A to A-, and

1 its parent, Pinnacle West Capital Corporation (“PNW”) from A- to BBB+, citing  
2 heightened business risk.<sup>8</sup> Subsequently, Moody’s Investors Service, Inc. (“Moody’s”)   
3 also downgraded APS from A2 to A3 and PNW from A3 to Baa1.<sup>9</sup> Moody’s noted  
4 that the downgrade was a function of “the recent decline in Arizona regulatory  
5 environment following the conclusion of the utility’s 2019 rate case as well as the  
6 organization’s weakened credit metrics.”<sup>10</sup>

7 Guggenheim Securities LLC, an equity analyst that follows PNW, informed its clients  
8 that:

9 [T]he “Arizona Corporation Commission is now confirmed to be the  
10 single most value destructive regulatory environment in the country  
11 as far as investor-owned utilities are concerned.”<sup>11</sup>

12 Similarly, S&P Global Market Intelligence’s Regulatory Research Associates  
13 (“RRA”) noted that this decision was “among the lowest ROEs RRA had  
14 encountered in its coverage of vertically integrated electric utilities in the past 30  
15 years.”<sup>12</sup>

---

<sup>8</sup> FitchRatings, “Fitch Downgrades Pinnacle West Capital & Arizona Public Service to ‘BBB+’; Outlooks Remain Negative,” October 12, 2021.

<sup>9</sup> Moody’s Investors Service, Inc., “Rating Actions: Moody’s downgrades Pinnacle West to Baa1 and Arizona Public Service to A3,” November 17, 2021.

<sup>10</sup> *Id.*

<sup>11</sup> S&P Global Market Intelligence, “Pinnacle West shares tumble after regulators slash returns in rate case,” October 7, 2021.

<sup>12</sup> S&P Global Market Intelligence, RRA Regulatory Focus, “Commission accords Arizona Public Service Company a well below average ROE,” October 8, 2021.

1 **Q: What are your conclusions regarding regulatory guidelines?**

2 A: The ratemaking process is premised on the principle that, for investors and  
3 companies to commit the capital needed to provide safe and reliable utility services,  
4 a utility must have the opportunity to recover the return of, and the market-required  
5 return on, its invested capital. Because utility operations are capital-intensive,  
6 regulatory decisions should enable the utility to attract capital at reasonable terms  
7 under a variety of economic and financial market conditions. Doing so balances the  
8 long-term interests of the utility and its customers.

9 The financial community carefully monitors the current and expected financial  
10 condition of utility companies and the regulatory frameworks in which they operate.  
11 In that respect, the regulatory framework is one of the most important factors in both  
12 debt and equity investors' assessments of risk. The Commission's order in this  
13 proceeding, therefore, should establish rates that provide the Company with a  
14 reasonable opportunity to earn an ROE that is: (1) adequate to attract capital at  
15 reasonable terms under a variety of economic and financial market conditions; (2)  
16 sufficient to ensure good financial management and firm integrity; and (3)  
17 commensurate with returns on investments in enterprises with similar risk. Providing  
18 Ameren Missouri the opportunity to earn its market-based cost of equity supports  
19 the financial integrity of the Company, which is in the interest of both customers  
20 and shareholders.

1 **Q: Does the fact that the Company is owned by Ameren, a publicly-traded**  
2 **company, affect your analysis?**

3 A: No, it does not. In this proceeding, consistent with stand-alone ratemaking  
4 principles, it is appropriate to establish the cost of equity for Ameren Missouri, not  
5 its publicly-traded parent, Ameren. It is appropriate to establish a return on equity  
6 and capital structure that provide Ameren Missouri the ability to attract capital on  
7 reasonable terms.

#### 8 **IV. Capital Market Conditions**

9 **Q: Why is it important to consider capital market conditions in the estimation of**  
10 **the investor-required return on equity?**

11 A: The ROE estimation models rely on market data that are either specific to the proxy  
12 group, in the case of the DCF model, or to the expectations of market risk, in the  
13 case of the risk premium models. Therefore, results of the ROE estimation models  
14 can be affected by prevailing market conditions at the time the analysis is performed.  
15 Because the ROE that is established in a rate proceeding is intended to be forward-  
16 looking, the analyst must use current and projected market data, specifically stock  
17 prices, dividends, growth rates and interest rates, in the ROE estimation models to  
18 estimate the required return for the subject company.

19 As discussed in the remainder of this section, analysts and regulators have  
20 concluded that current market conditions have affected the results of the ROE  
21 estimation models. As a result, it is important to consider the effect of these

1 conditions on the ROE estimation models when determining the appropriate range  
2 and recommended ROE for a future period. If investors do not expect current market  
3 conditions to be sustained in the future, it is possible that the ROE estimation models  
4 will not provide an accurate estimate of investors' required return during that test  
5 year. Therefore, it is very important to consider projected market data to estimate  
6 the return for that forward-looking period.

7 **Q: What factors are affecting the cost of equity for regulated utilities in the**  
8 **current and prospective capital markets?**

9 A: The financial environment is substantially different than when the Commission set  
10 the Company's current authorized ROE, and the changes in the capital markets will  
11 have a direct and significant effect on the ROEs required by investors. The cost of  
12 equity for regulated utility companies is being affected by several factors in the  
13 current and prospective capital markets, including: (1) changes in monetary policy;  
14 (2) currently high inflation continuing into 2022; (3) increasing interest rates, and (4)  
15 volatile market conditions. These factors affect the assumptions used in the ROE  
16 estimation models, and as a result, it is important that these changed conditions are  
17 recognized by the Commission in establishing the Company's cost of equity in this  
18 proceeding.

19 **Q: What effect do current and prospective market conditions have on the cost of**  
20 **equity for the Company?**

21 A: The combination of persistently high inflation, the Federal Reserve's changes in  
22 monetary policy, and the dramatic shifts in market conditions resulting from political

1 influences all contribute to an expectation of increased market risk and an increase  
2 in the cost of the investor-required return on equity. Inflation is currently at its highest  
3 level seen in approximately 40 years. Interest rates, which have increased  
4 significantly from the pandemic-related lows of 2020, are expected to continue to  
5 increase in direct response to the Federal Reserve's use of monetary policy. As  
6 discussed later herein, since there is a strong correlation between interest rates and  
7 authorized utility ROEs, it is reasonable to expect that investors' cost of equity is  
8 increasing. Because the cost of equity in this proceeding is being estimated for the  
9 period that the Company's rates will be in effect, and because utility cost of equity is  
10 expected to increase over the near term for utilities, it is essential that these factors  
11 be considered in setting a forward-looking cost of equity. ROE estimates based in  
12 whole or in part on current market conditions will understate the ROE during the  
13 future period that the Company's rates will be in effect.

#### 14 **IV.A. The Effect of Monetary Policy on Market Dynamics**

15 **Q: What actions were taken by the Federal Reserve in response to the COVID-19**  
16 **pandemic?**

17 **A:** As a result of the COVID-19 pandemic, the Federal Reserve undertook expansive  
18 monetary and fiscal programs to mitigate the economic effects of the pandemic and  
19 to provide additional support for the economy to recover from the COVID-19  
20 recession. The expansive monetary and fiscal policy programs resulted in a strong  
21 economic recovery in 2021 from the COVID-19 induced recessionary period in 2020.  
22 In fact, according to the Bureau of Economic Analysis, real GDP grew by 5.7 percent

1 in 2021 driven primarily by a 7.9 percent increase in personal consumption  
2 expenditures.<sup>13</sup> Moreover, the unemployment rate decreased from a high of 14.7  
3 percent in April 2020 to 3.9 percent as of December 2021.<sup>14</sup> In addition, the  
4 economic recovery has also included a substantial increase in inflation. The strong  
5 economic recovery along with the increase in inflation has resulted in the Federal  
6 Reserve normalizing monetary policy and removing the accommodative policy  
7 programs that it used to mitigate the effects of COVID-19.

8 **Q: Please summarize the monetary policy actions taken by the Federal Reserve**  
9 **over the past six months.**

10 A: In the past six months, the Federal Reserve has taken a number of steps and  
11 continued to accelerate the normalization of monetary policy in response to the  
12 significant increase in inflation that has occurred. As of the June 15, 2022 meeting,  
13 the Federal Reserve:

- 14 • Completed its taper of Treasury bond and mortgage-backed securities  
15 purchases;<sup>15</sup>

---

<sup>13</sup> Bureau of Economic Analysis, News Release, February 24, 2022, at 8.

<sup>14</sup> Bureau of Labor Statistics. <https://data.bls.gov/timeseries/LNS14000000>

<sup>15</sup> Federal Reserve Bank of New York, <https://www.newyorkfed.org/markets/domestic-market-operations/monetary-policy-implementation/treasury-securities/treasury-securities-operational-details#monthly-details>.

- 1           • Increased the target federal funds rate to 0.25 – 0.50 percent at the March  
2           16, 2022 meeting,<sup>16</sup> to 0.75 to 1.00 percent at the May 4, 2022 meeting,<sup>17</sup>  
3           and then to 1.50 percent to 1.75 percent at the June 15, 2022 meeting;<sup>18</sup>
- 4           • Forecasted a total of seven additional 25-basis-point rate increases in 2022  
5           and two 25-basis-point rate increases in 2023, which resulted in a median  
6           forecast of the federal funds rate of 3.4 percent and 3.8 percent,  
7           respectively;<sup>19</sup> and
- 8           • Started reducing its holdings of Treasury and mortgage-backed securities  
9           on June 1, 2022. Specifically, the Federal Reserve will reduce the size of  
10          its balance sheet by only reinvesting principal payments on owned  
11          securities after the total amount of payments received exceeds a defined  
12          cap. For Treasury securities, the cap will be set at \$30 billion per month for  
13          the first three months and \$60 billion per month after the first three months,  
14          while for mortgage-backed securities the cap will be set at \$17.5 billion per  
15          month for the first three months and \$35 billion per month after the first three  
16          months.<sup>20</sup>

#### 17           **IV.B. Inflationary Expectations in Current and Projected Market** 18           **Conditions**

19   **Q: Has the increase in inflation been significant?**

20   **A:** Yes. As shown in Figure 2, the year-over-year (“YOY”) change in the Consumer  
21    Price Index (“CPI”) published by the Bureau of Labor Statistics was 1.37 percent in

<sup>19</sup> Federal Reserve, Summary of Economic Projections, June 15, 2022, at 2.

<sup>20</sup> Federal Reserve, Plans for Reducing the Size of the Federal Reserve's Balance Sheet, Press Release, May 4, 2022.

1 January 2021. However, since that time, and particularly since the start of 2022,  
2 inflation has increased steadily, reaching a high of 9.0 percent YOY change in June  
3 2022, which is the largest 12-month increase since 1981 and significantly greater  
4 than any level seen since January 2008.

**FIGURE 2: YOY PERCENT CHANGE IN CONSUMER PRICE INDEX, JANUARY 2008 – JUNE 2022**

5 **Q: Do investors expect inflation pressures to continue for a number of years?**

6 **A:** Yes. One measure of investors' expectations regarding inflation is the breakeven  
7 inflation rate calculated as the spread between the yield on a Treasury bond and the  
8 yield on a Treasury Inflation-Protected bond, which would account for the effect of  
9 inflation. The maturity of the bond selected would then reflect investors' views of  
10 inflation during the holding period of the bond.

11 For example, the 10-year breakeven inflation rate is calculated as the spread  
12 between the 10-year Treasury bond yield and the 10-year Treasury Inflation-

1 Protected bond yield. As shown in Figure 3, the 10-year breakeven inflation rate is  
2 currently greater than any level seen since January 2003. Furthermore, the 30-day  
3 average of the 10-year breakeven inflation rate as of May 31, 2022 was 2.76 percent,  
4 indicating that investors expect inflation will remain well above the Federal Reserve's  
5 2 percent target over the next 10 years.

**FIGURE 3: 10-YEAR BREAKEVEN INFLATION RATE, JANUARY 2003 – JUNE 2022<sup>21</sup>**

6 There are many factors as to why inflation is expected to remain elevated. For  
7 example, *Kiplinger* recently noted a few factors, including supply shortages due to  
8 COVID-19 and Russia's war in Ukraine, which led *Kiplinger* to forecast an inflation  
9 rate of 6.3 percent for 2022:

---

<sup>21</sup> Federal Reserve Bank of St. Louis, 10-Year Breakeven Inflation Rate [T10YIE].

1 The inflation rate is expected to ease further over the rest of this year,  
2 but will likely end 2022 at a still-high rate of about 6.3%. In 2023 the  
3 rate should fall faster, down to 3.0% by the end of the year. The  
4 higher cost of housing will keep inflation rates elevated for some time  
5 to come. Gasoline prices and heating costs are likely to stay high for  
6 a good while because of the war in Ukraine, but they may plateau  
7 instead of climbing more. The price of cars and trucks will also stay  
8 at a high level until the semiconductor shortage ends sometime next  
9 year. Continued spot shortages of various items will drive their price  
10 up, adding to the overall inflation rate. The latest is a shortage of  
11 baby formula.<sup>22</sup>

#### 12 **IV.C. Effect of Inflation on Interest Rates and the Investor-** 13 **Required Return**

14 **Q: What effect will inflation have on long-term interest rates?**

15 A: Inflation and the Federal Reserve's normalization of monetary policy will likely result  
16 in increases in long-term interest rates. Specifically, inflation reduces the purchasing  
17 power of the future interest payments an investor expects to receive over the  
18 duration of the bond, and this risk increases the longer the duration of the bond. As  
19 a result, investors will require higher yields to compensate for the increased risk of  
20 inflation, which means interest rates in turn increase.

21 **Q: Have the yields on long-term government bonds increased in response to**  
22 **inflation and the Federal Reserve's normalization of monetary policy?**

23 A: Yes, they have. As shown in Figure 4, since the Federal Reserve's December 2021  
24 meeting, as the process of normalizing monetary policy has accelerated to respond  
25 to inflation, the yield on the 10-year Treasury bond has increased over 150 basis

---

<sup>22</sup> Payne, David, "Inflation Will Ease, But Only Gradually This Year," *Kiplinger*, May 11, 2022.

1 points, from 1.47 percent on December 15, 2021 to 2.98 percent on June 30, 2022.  
2 The increase is due to the Federal Reserve's announcements at its December 2021,  
3 January 2022, March 2022 and May 2022 meetings, investors' expectations  
4 regarding the Federal Reserve's announcement at the June 2022 meeting, and the  
5 continued increased levels of inflation that are now expected to persist much longer  
6 than the Federal Reserve and investors had originally projected.

**FIGURE 4: 10-YEAR TREASURY BOND YIELD, JANUARY 2021 – JUNE 2022<sup>23</sup>**

7  
8 **Q: What have equity analysts said about long-term government bond yields?**  
9 **A:** Several equity analysts have noted that they expect economic conditions to continue  
10 to improve and thus the yields on long-term government bonds to continue to

---

<sup>23</sup> S&P Capital IQ Pro.

1 increase through the end of 2022. As shown in Figure 5, equity analysts are  
2 projecting a range for the yield of the 10-year Treasury bond of between 3.15 percent  
3 and 4.00 percent through the end of 2022. In addition, it is important to note that  
4 the 10-year Treasury Bond was trading as high as 3.49 percent as of June 14, 2022.

**FIGURE 5: EQUITY ANALYSTS FORECAST OF THE 10-YEAR TREASURY YIELD**

	<b>Actual</b>
30-Day Average as of June 30, 2022	3.04%
	<b>2022 Forecast</b>
Advocate Capital Management <sup>24</sup>	4.00%
Goldman Sachs <sup>25</sup>	3.30%
<i>Blue Chip Financial Forecasts</i> (Consensus Estimate) <sup>26</sup>	3.40%
BMO Economics <sup>27</sup>	3.15%

5  
6 **Q: Have you considered any additional indicators that may imply long-term**  
7 **interest rates are expected to increase?**

8 A: Yes, I have. I considered the net position of commercials (*i.e.*, banks) in U.S.  
9 Treasury Bond futures contracts as reported in the Commitment of Traders Report  
10 produced by the Commodity Futures Trading Commission. A net position is defined

---

<sup>24</sup> MarketWatch, "This bond expert who called the spike in U.S. yields forecasts the 10-year to reach 4%," May 7, 2022. <https://www.marketwatch.com/story/this-bond-expert-who-called-the-spike-in-u-s-yields-forecasts-the-10-year-to-reach-4-11651843223>.

<sup>25</sup> Pollard, Amelia, "Goldman Lifts Yield Forecasts, Sees 10-Year Treasuries at 3.3%," Bloomberg.com, May 12, 2022.

<sup>26</sup> *Blue Chip Financial Forecasts*, Vol. 41, No. 7, July 1, 2022, at 2 (average of 3Q/2022 and 4Q/2022).

<sup>27</sup> BMO Economics, "Rates Scenario for May 11, 2022," May 11, 2022.

1 as the total number of long positions in a futures contract minus the total number of  
2 short positions in a futures contract. A long position means that an investor agrees  
3 to purchase an asset in the future at a specified price today and therefore profits if  
4 the price of the underlying asset increases. Conversely, a short position is when an  
5 investor agrees to sell an asset at a time in the future at a specified price today and  
6 profits if the price of the asset declines. Therefore, if banks are increasing the  
7 number of short positions and thus have a declining net position, the banks are  
8 assuming that the price of the asset will decline. As shown in Figure 6, the net  
9 position of banks in U.S. Treasury Bonds has been decreasing since the end of  
10 2020. Therefore, banks are forecasting a decrease in the price of long-term  
11 government bonds and thus an increase in the yields (which are inversely related to  
12 the price) over the near-term.

**FIGURE 6: COMMITMENT OF TRADERS REPORT – NET POSITION OF BANKS IN U.S. TREASURY BOND FUTURES CONTRACTS<sup>28</sup>**

1 **IV.D. Expected Performance of Utility Stocks and the Investor-**  
2 **Required ROE on Utility Investments**

3 **Q: Are utility share prices correlated to changes in the yields on long-term**  
4 **government bonds?**

5 **A:** Yes, interest rates and utility share prices are inversely correlated which means, for  
6 example, that an increase in interest rates will result in a decline in the share prices  
7 of utilities. For example, Goldman Sachs and Deutsche Bank recently examined the  
8 sensitivity of share prices of different industries to changes in interest rates over the  
9 past five years. Both Goldman Sachs and Deutsche Bank found that utilities had

---

<sup>28</sup> Commitment of Traders Report, as of June 30, 2022; <https://www.cftc.gov/MarketReports/CommitmentsofTraders/HistoricalCompressed/index.htm>

1 one of the strongest negative relationships with bond yields (*i.e.*, increases in bond  
2 yields resulted in the decline of utility share prices).<sup>29</sup>

3 **Q: Have electric utility stock prices recently increased?**

4 A: Yes. Utility stock prices had trended down as interest rates moved higher; however,  
5 as a result of the political turmoil associated with the war in Ukraine, investors have  
6 recently returned to utility stocks as a safe haven seeking to lower risk, resulting in  
7 higher electric utility stock prices and thus lower dividend yields.

8 **Q: How do equity analysts expect the utilities sector to perform in an increasing  
9 interest rate environment?**

10 A: Even with the recent increase in electric utility stock prices, equity analysts project  
11 that utilities are expected to continue to underperform the broader market as interest  
12 rates increase. For example, in its most recent Big Money poll, which closed in mid-  
13 April, *Barron's* surveyed 112 money managers regarding the outlook for the next  
14 twelve months, and the professional investors indicated that the utility sector as the  
15 least attractive of all industries for investment.<sup>30</sup> Additionally, Fidelity recently noted

---

<sup>29</sup> Lee, Justina, "Wall Street Is Rethinking the Treasury Threat to Big Tech Stocks," Bloomberg.com, March 11, 2021; [www.bloomberg.com/news/articles/2021-03-11/wall-street-is-rethinking-the-treasury-threat-to-big-tech-stocks](http://www.bloomberg.com/news/articles/2021-03-11/wall-street-is-rethinking-the-treasury-threat-to-big-tech-stocks).

<sup>30</sup> Jasinski, Nicholas, Bearish Now, Bullish Later: How Investors Are Sizing Up Stocks, *Barron's*, updated April 24, 2022.

1           that its underweight recommendation on the sector reflected a combination of “poor  
2           fundamentals and expensive valuations.”<sup>31</sup>

3       **Q: Have you reviewed any market indicators that may imply that utilities will**  
4       **underperform over the near-term?**

5       A: Yes. As discussed, the utility sector is considered a “bond proxy” or a sector in  
6       which investors are attracted as a safe haven alternative to bonds, and utility stock  
7       prices are therefore inversely related to changes in interest rates. For example, the  
8       utility sector tends to perform well when interest rates are low since the dividend  
9       yields for utilities offer investors the prospect of higher returns when compared to  
10      the yields on long-term government bonds. Conversely, the utility sector  
11      underperforms as the yields on long-term government bonds increase and the  
12      spread between the dividend yields on utility stocks and the yields on long-term  
13      government bonds decreases. Therefore, I examined the yield spread between the  
14      dividend yields of utility stocks and the yields on long-term government bonds from  
15      January 2010 through June 2022. I selected the dividend yield on the Utilities Select  
16      Sector SPDR Fund (“XLU”)<sup>32</sup> as the measure of the dividend yields for the utility  
17      sector and the yield on the 10-year Treasury Bond as the estimate of the yield on  
18      long-term government bonds.

---

<sup>31</sup> Chisolm, Denise, “Chisolm: Top sectors to watch in Q2,” *Fidelity*, May 4, 2022.

<sup>32</sup> The Utilities Select Sector Index includes companies from the following industries: electric utilities; water utilities; multi-utilities; independent power and renewable electricity producers; and gas utilities.

1 As shown in Figure 7, the yield spread first went negative in June 2022 indicating  
2 that yield on the 10-year Treasury Bond was greater than the dividend yield for the  
3 XLU, which has not occurred since 2010. The 30-day average yield spread as of  
4 the end of June was -0.07 percent, which is well below the long-term average since  
5 January 2010 of 1.44 percent. Given that the yield spread is currently negative and  
6 well below the long-term average, and interest rates are expected to continue to  
7 increase, it is reasonable to conclude that the utility sector will underperform over  
8 the near-term. This is because investors that purchased utility stocks as an  
9 alternative to the low yields on long-term government bonds will begin to rotate back  
10 into government bonds as the yields on long-term government bonds continue to  
11 increase, thus resulting in a decrease in the share prices of utilities.

**FIGURE 7: YIELD SPREAD BETWEEN THE DIVIDEND YIELD ON THE XLU AND THE YIELD ON THE 10-YEAR TREASURY BOND, JANUARY 2010 – JUNE 2023**

1  
2 **Q: What is the significance of the inverse relationship between interest rates and**  
3 **utility share prices in the current market?**

4 **A:** As discussed, the Federal Reserve is aggressively normalizing monetary policy in  
5 response to inflation, which is expected to increase long-term government bond  
6 yields. As a result, an increase in interest rates will have an effect on the ROE  
7 estimation models used to establish the cost of equity for the Company in this  
8 proceeding that must be considered.

9 As explained further herein, the Constant Growth DCF model reflects the expected  
10 dividend yield plus an expected growth rate; however, historical utility stock prices  
11 are required to calculate a dividend yield. Therefore, if interest rates increase as

---

<sup>33</sup> S&P Capital IQ Pro; Bloomberg.

1 expected over the near-term during which the Company's rates will be in effect, then  
2 the share prices of utilities will decline, and dividend yields will increase. If dividend  
3 yields increase going forward, the ROE calculated by the model currently using  
4 historical utility stock prices and dividend yields will understate the ROE for the  
5 Company during the period in which its rates will be effective.

6 Because interest rates have increased substantially and are projected to be higher  
7 by the time the Company's rates are made effective, prospective market conditions  
8 warrant consideration of other ROE estimation models such as the CAPM and  
9 ECAPM, which may better reflect expected market conditions. The CAPM and  
10 ECAPM models rely on a risk-free rate, beta coefficient and market risk premium,  
11 and two of those inputs (*i.e.*, the risk-free rate and market risk premium) are forward-  
12 looking. However, since interest rates are increasing and expected to continue to  
13 increase over the near-term, relying on the historical average interest rates as the  
14 risk-free rate in the CAPM will also tend to understate the cost of equity.

15 Consequently, it is important to recognize that with the current and projected capital  
16 market conditions that the results of the ROE estimation models are lagging the  
17 investor-required returns over the period that the Company's rates will be in effect.  
18 Therefore, the current and expected market conditions support consideration of  
19 forward-looking estimates and a range of ROE results so that the Company's cost  
20 of equity is not understated during the period in which its rates will be in effect.

1 **Q: Have state regulatory commissions considered market events and the utility’s**  
2 **ability to attract capital in determining the equity return?**

3 A: Yes. In a recent rate case for Consumers Energy Company, the Michigan Public  
4 Service Commission (“Michigan PSC”) noted that it is important to consider how a  
5 utility’s access to capital could be affected in the near-term as a result of market  
6 reactions to global events like those that have occurred in the recent past.

7 Specifically, the Michigan PSC stated that:

8 [i]n setting the ROE at 9.90%, the Commission believes there is an  
9 opportunity for the company to earn a fair return during this period of  
10 atypical market conditions. This decision also reinforces the belief,  
11 as stated in the Commission’s March 29 order, “that customers do  
12 not benefit from a lower ROE if it means the utility has difficulty  
13 accessing capital at attractive terms and in a timely manner.” These  
14 conditions still hold true based on the evidence in the instant case.  
15 The fact that other utilities have been able to access capital despite  
16 lower ROEs, as argued by many intervenors, is also a relevant  
17 consideration. It is also important to consider how extreme market  
18 reactions to global events, as have occurred in the recent past, may  
19 impact how easily capital will be able to be accessed during the  
20 future test period should an unforeseen market shock occur. The  
21 Commission will continue to monitor a variety of market factors in  
22 future rate cases to gauge whether volatility and uncertainty continue  
23 to be prevalent issues that merit more consideration in setting the  
24 ROE.<sup>34</sup>

25 The Michigan PSC references “global events” and the overall effect the events could  
26 have on the ability of a utility to access capital. Consistent with the Michigan PSC’s  
27 views, it is important to consider current market conditions and the impact of those

---

<sup>34</sup> Michigan Public Service Commission Order, Cause No. U-20697, Consumers Energy Company, December 17, 2020, at 165; emphasis added.

1 conditions on the access to and cost of capital, and to position utilities to be able to  
2 maintain access in rapidly changing market conditions.

### 3 **IV.E. Conclusion Regarding Capital Market Conditions**

4 **Q: What are your conclusions regarding the effect of current market conditions**  
5 **on the cost of equity for the Company?**

6 A: Over the near-term, investors expect long-term interest rates to increase in response  
7 to continued elevated levels of inflation and the Federal Reserve's normalization of  
8 monetary policy. Because the share prices of utilities are inversely correlated to  
9 interest rates, an increase in long-term government bond yields will likely result in a  
10 decline in utility share prices, which is the reason a number of equity analysts expect  
11 the utility sector to underperform over the near-term. The expected  
12 underperformance of utilities means that DCF models using recent historical data  
13 likely underestimate investors' required return over the period that rates will be in  
14 effect. This change in market conditions also supports the use of other ROE  
15 estimation models such as the CAPM and the ECAPM, which may better reflect  
16 expected market conditions.

### 17 **V. Proxy Group Selection**

18 **Q: Have you developed a proxy group for estimating the ROE for the Company in**  
19 **this proceeding?**

20 A: Yes. In this proceeding, I am estimating the cost of equity for the Company, which  
21 is a rate-regulated subsidiary of Ameren, and is not itself publicly-traded. Since the

1 ROE is a market-based concept, and the Company's operations do not make up the  
2 entirety of a publicly-traded entity, it is necessary to establish a group of companies  
3 that is both publicly-traded and comparable to the Company in certain fundamental  
4 business and financial respects to serve as its "proxy" for purposes of the ROE  
5 estimation process. Even if Ameren Missouri were a publicly-traded entity, it is  
6 possible that transitory events could bias its respective market value over a given  
7 period. A significant benefit of using a proxy group is that it moderates the effects  
8 of unusual events that may be associated with any one company. The proxy  
9 companies used in my analyses all possess a set of operating and financial risk  
10 characteristics that are substantially comparable to Ameren Missouri, and, therefore,  
11 provide a reasonable basis for deriving the appropriate ROE.

12 **Q: Please provide a brief profile of the Company.**

13 A: Ameren Missouri (also known as Union Electric Company) is a wholly-owned  
14 subsidiary of Ameren Corporation. The Company is the largest electric utility in  
15 Missouri, providing regulated retail electric service to more than 1.2 million electric  
16 customers across a 24,000 square mile area in central and eastern Missouri,  
17 including the greater St. Louis metropolitan area.<sup>35</sup> As of December 31, 2021, the  
18 Company's net utility electric plant in Missouri was approximately \$14.3 billion.<sup>36</sup>

---

<sup>35</sup> Ameren Corporation, Form 10-K, February 22, 2022, at 98.

<sup>36</sup> Union Electric Company d/b/a Ameren Missouri, FERC Form 1, April 14, 2022, at pp. 110-11.

1 Ameren Missouri's issuer/corporate credit rating is currently rated BBB+/Stable by  
2 Standard & Poor's ("S&P") and Baa1/Stable by Moody's.<sup>37</sup>

3 **Q: How did you select the companies included in your proxy group?**

4 A: I began with the group of 36 companies that Value Line Investment Survey ("Value  
5 Line") classifies as electric utilities and applied the following screening criteria to  
6 select companies that:

- 7 • pay consistent quarterly cash dividends because such companies can be  
8 analyzed using the Constant Growth DCF model;
- 9 • have positive long-term earnings growth forecasts from at least two equity  
10 analysts;
- 11 • have investment grade long-term issuer ratings from both S&P and  
12 Moody's;
- 13 • own generation assets included in rate base;
- 14 • have more than 40 percent of total energy sales provided by company-  
15 owned generation;
- 16 • derive more than 60 percent of total operating income from regulated  
17 operations;
- 18 • derive more than 80 percent of their total regulated operating income from  
19 regulated electric operations; and
- 20 • were not party to a merger or transformative transaction during the  
21 analytical period considered.

---

<sup>37</sup> Ameren Corporation, Form 10-K, February 22, 2022, at 66; Moody's Investor Services, Inc., Credit Opinion, Union Electric Company, September 13, 2021.

1 **Q: Did you exclude any other companies from the proxy group?**

2 A: Yes. I also excluded Pinnacle West Capital Corporation (“PNW”) and Hawaiian  
3 Electric Industries, Inc. (“HE”). As previously discussed, PNW’s largest operating  
4 subsidiary, APS, recently received a negative regulatory decision, and as a result,  
5 the share price of PNW decreased approximately 24 percent over a two-month  
6 period from October through November 2021. Therefore, similar to the reason that  
7 I exclude transformative transactions, because the stock price can be affected by  
8 one-time events, I also excluded PNW from the proxy group.

9 HE’s operations are concentrated on the islands of Hawaii; therefore, the company  
10 faces geographic concentration risk. As noted in HE’s 2021 Form10-K:

11 The Company is subject to the risks associated with the geographic  
12 concentration of its businesses and current lack of interconnections  
13 that could result in service interruptions at the Utilities or higher  
14 default rates on loans held by ASB [American Savings Bank].<sup>38</sup>

15 The increased risk of service interruptions resulting from HE’s geographic location,  
16 which could result in revenue loss and increased costs, is a risk unique to HE and  
17 would not apply to utilities located on the U.S. mainland. Furthermore, HE’s  
18 unregulated operations, which represented approximately 33 percent of the  
19 company’s operation income in 2021, are concentrated in the banking sector  
20 through the ownership of American Savings Bank (“ASB”).<sup>39</sup> ASB also only operates  
21 on Hawaii; thus, all of the company’s consumer and commercial loans are to

---

<sup>38</sup> Hawaii Electric Industries, Inc., 2021 Form 10-K, at 23.

<sup>39</sup> *Id.*, at 86.

1 customers on Hawaii. If Hawaii were to face an adverse economic or political event,  
2 ASB could face severe financial effects given the company's geographic  
3 concentration in Hawaii.<sup>40</sup> Considering HE's unique geographical risks, I have  
4 excluded HE from my proxy group.

5 **Q: What is the composition of your proxy group?**

A: The screening criteria discussed above is shown in Schedule AEB-D2, Attachment  
2 and resulted in a proxy group consisting of the companies shown in Figure 8.

1 **VI. Cost Of Equity Estimation**

2 **Q: Please briefly discuss the ROE in the context of the regulated rate of return.**

3 A: The overall rate of return for a regulated utility is based on its weighted average cost  
4 of capital, in which the cost rates of the individual sources of capital are weighted by  
5 their respective book values. While the cost of debt and preferred stock can be  
6 directly observed, the cost of equity is market-based and, therefore, must be  
7 estimated based on observable market data.

8 **Q: How is the required ROE determined?**

9 A: The required ROE is determined by using one or more analytical techniques that  
10 rely on market data to quantify investor expectations regarding the range of required  
11 equity returns. Informed judgment is applied, based on the results of those  
12 analyses, to determine where within the range of results the cost of equity for a  
13 company falls. As a general proposition, the key consideration in determining the  
14 cost of equity is to ensure that the methodologies employed reasonably reflect  
15 investors' views of the financial markets, the proxy group companies, and the subject  
16 company's risk profile.

17 **Q: What methods did you use to determine the Company's ROE?**

18 A: I considered the results of the Constant Growth DCF model, the CAPM, the ECAPM,  
19 and the Bond Yield Plus Risk Premium Analysis. As discussed in more detail below,  
20 a reasonable ROE estimate appropriately considers alternative methodologies and  
21 the reasonableness of their individual and collective results.

## 1           **VI.A. Importance of Multiple Analytical Approaches**

2   **Q: Why is it important to use more than one analytical approach to estimate the**  
3   **cost of equity?**

4   A: Because the cost of equity is not directly observable, it must be estimated based on  
5   both quantitative and qualitative information. When faced with the task of estimating  
6   the cost of equity, analysts and investors are inclined to gather and evaluate as  
7   much relevant data as reasonably can be analyzed. As a practical matter, all the  
8   models available for estimating the cost of equity are subject to limiting assumptions  
9   or other methodological constraints. Consequently, many well-regarded finance  
10   texts recommend using multiple approaches when estimating the cost of equity. For  
11   example, Copeland, Koller, and Murrin<sup>41</sup> suggest using the CAPM and Arbitrage  
12   Pricing Theory model, while Brigham and Gapenski<sup>42</sup> recommend the CAPM, DCF,  
13   and Bond Yield Plus Risk Premium approaches.

14   **Q: Is it important given the current market conditions to use more than one**  
15   **analytical approach?**

16   A: Yes. As previously discussed, interest rates have been relatively low as a result of  
17   the Federal Reserve's accommodative monetary policy. The effect of the recent low  
18   interest rate environment was relatively high stock valuations and low dividend yields  
19   for utilities, which in turn result in DCF cost of equity estimates that understate the

---

<sup>41</sup> Tom Copeland, Tim Koller and Jack Murrin, Valuation: Measuring and Managing the Value of Companies, 3rd Ed. (New York: McKinsey & Company, Inc., 2000), at 214.

<sup>42</sup> Eugene Brigham, Louis Gapenski, Financial Management: Theory and Practice, 7th Ed. (Orlando: Dryden Press, 1994), at 341.

1 forward-looking cost of equity. As interest rates have increased recently, utility stock  
2 prices had trended down, yet as a result of the political turmoil associated with the  
3 war in Ukraine, investors have recently returned to utility stocks as a safe haven  
4 seeking to lower risk, increasing utility stock prices and resulting in lower dividend  
5 yields. However, as discussed previously, the electric utility sector is projected to  
6 underperform the broader market during the period when the rates established in  
7 this case are effective. This indicates that current dividend yields for utilities  
8 reflected in the DCF are projected to underestimate the cost of equity for the  
9 Company going forward.

10 Also as discussed, interest rates are projected to substantially increase over the next  
11 12 to 18 months, which affects the CAPM in two ways: (1) the risk-free rate is lower  
12 than it is expected to be going forward, thus understating the CAPM result; and (2)  
13 because the market risk premium is a function of interest rates (*i.e.*, it is the return  
14 on the broad stock market less the risk-free interest rate), the market risk premium  
15 is higher than what it is expected to be going forward, thus overstating the CAPM  
16 result. The net effect of these impacts is that with interest rates and bond yields now  
17 rising, the expected cost of equity will be higher than is suggested by the CAPM  
18 using historical average yields. Thus, use of projected Treasury bond yields in the  
19 CAPM results in estimates that will be more reflective of the market conditions that  
20 investors expect during the period that the Company's rates will be in effect.

21 During such a transitory period as this one, it is important to use multiple analytical  
22 approaches to moderate the impact that the recent low interest rate environment

1 has had on the ROE estimates for the proxy group and, where possible, consider  
2 using projected market data in the models to estimate the return for the forward-  
3 looking period over which the rates being established will be in effect. Under these  
4 circumstances, relying exclusively on historical and even current assumptions in  
5 these models, without considering whether these assumptions are consistent with  
6 investors' future expectations, will underestimate the cost of equity that investors  
7 would require over the period that the rates in this case are to be in effect.

8 **Q: Are you aware of regulatory commissions that have recognized the**  
9 **importance of considering the results of multiple models?**

10 A: Yes. The Commission, as well as various other regulatory commissions have  
11 considered the results of multiple ROE estimation methodologies such as the DCF,  
12 CAPM, ECAPM and Bond Yield Plus Risk Premium models in determining the  
13 authorized ROE, including the Washington Utilities and Transportation Commission  
14 ("Washington UTC"),<sup>43</sup> the Michigan Public Service Commission ("Michigan PSC"),<sup>44</sup>  
15 the Minnesota Public Utilities Commission,<sup>45</sup> the Iowa Utilities Board,<sup>46</sup> and the New  
16 Jersey Board of Public Utilities.<sup>47</sup>

<sup>47</sup> NJBPU Docket No. ER12111052, OAL Docket No. PUC16310-12, Order Adopting Initial Decision with Modifications and Clarifications, March 18, 2015, at 71.

1 For example, the Commission has stated that, “[f]inancial analysts use variations on  
2 three generally accepted methods to estimate a company’s fair rate of return on  
3 equity,” noting the DCF, CAPM and Risk Premium approaches, and that “no one  
4 method is any more ‘correct’ than any other method in all circumstances,” and that,  
5 “analysts balance their use of all three methods to reach a recommended return on  
6 equity.”<sup>48</sup>

7 The Washington UTC has repeatedly emphasized that it “places value on each of  
8 the methodologies used to calculate the cost of equity and does not find it  
9 appropriate to select a single method as being the most accurate or instructive.”<sup>49</sup>

10 The Washington UTC has also explained that “[f]inancial circumstances are  
11 constantly shifting and changing, and we welcome a robust and diverse record of  
12 evidence based on a variety of analytics and cost of capital methodologies.”<sup>50</sup>

13 Additionally, in a 2018 DTE Gas Company rate proceeding, the Michigan PSC  
14 considered the results of each of the models presented by the ROE witnesses, which  
15 included the DCF, CAPM, and ECAPM in the determination of the authorized ROE.<sup>51</sup>

16 In the proceeding, the Michigan PSC also considered authorized ROEs in other

2 risks of DTE Gas.

### 3 **VI.B. Constant Growth DCF Model**

4 **Q: Please describe the DCF approach.**

5 A: The DCF approach is based on the theory that a stock's current price represents the  
6 present value of all expected future cash flows. In its most general form, the DCF  
7 model is expressed as follows:

$$8 \quad P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \dots + \frac{D_\infty}{(1+k)^\infty} \quad [1]$$

9 Where  $P_0$  represents the current stock price,  $D_1 \dots D_\infty$  are all expected future  
10 dividends, and  $k$  is the discount rate, or required ROE. Equation [1] is a standard  
11 present value calculation that can be simplified and rearranged into the following  
12 form:

$$13 \quad k = \frac{D_0(1+g)}{P_0} + g \quad [2]$$

14 Equation [2] is often referred to as the Constant Growth DCF model in which the first  
15 term is the expected dividend yield and the second term is the expected long-term  
16 growth rate.

17 **Q: What assumptions are required in the Constant Growth DCF model?**

18 A: The Constant Growth DCF model requires the following assumptions: (1) a constant  
19 growth rate for earnings and dividends; (2) a stable dividend payout ratio; (3) a price-

1 to-earnings (“P/E”) ratio; and (4) a discount rate greater than the expected growth  
2 rate. To the extent any of these assumptions is violated, considered judgment and/or  
3 specific adjustments should be applied to the results.

4 **Q: What market data did you use to calculate the dividend yield in your Constant**  
5 **Growth DCF model?**

6 A: The dividend yield in my Constant Growth DCF model was based on the proxy  
7 companies’ current annual dividend and average closing stock prices over the most  
8 recent 30, 90, and 180 trading days as of June 30, 2022.

9 **Q: Why did you use three averaging periods for stock prices?**

10 A: In my Constant Growth DCF model, I use an average of recent trading days to  
11 calculate the price term ( $P_0$ ) in the DCF model to ensure that the ROE is not skewed  
12 by anomalous events that may affect stock prices on any given trading day. The  
13 averaging period should also be reasonably representative of expected capital  
14 market conditions over the long-term. However, as discussed above, recent market  
15 data is not representative of expected market conditions over the long-term.  
16 Therefore, the results of my Constant Growth DCF model using historical data may  
17 underestimate the forward-looking cost of equity. As a result, I place more weight on  
18 the median to median-high results produced by my Constant Growth DCF model.

19 **Q: Did you make any adjustments to the dividend yield to account for periodic**  
20 **growth in dividends?**

1 A: Yes. Since utility companies tend to increase their quarterly dividends at different  
2 times throughout the year, it is reasonable to assume that dividend increases will be  
3 evenly distributed over calendar quarters. Given that assumption, it is reasonable to  
4 apply one-half of the expected annual dividend growth rate for purposes of  
5 calculating the expected dividend yield component of the DCF model. This  
6 adjustment ensures that the expected first year dividend yield is, on average,  
7 representative of the coming twelve-month period, and does not overstate the  
8 aggregated dividends to be paid during that time.

9 **Q: Why is it important to select appropriate measures of long-term growth in**  
10 **applying the DCF model?**

11 A: In its Constant Growth form, the DCF model (*i.e.*, Equation [2]) assumes a single  
12 long-term growth rate in perpetuity. To reduce the long-term growth rate to a single  
13 measure, one must assume that the dividend payout ratio remains constant and that  
14 earnings per share, dividends per share, and book value per share all grow at the  
15 same constant rate. Over the long run, however, dividend growth can only be  
16 sustained by earnings growth. Therefore, it is important to incorporate a variety of  
17 sources of long-term earnings growth rates into the Constant Growth DCF model.

18 **Q: What sources of long-term growth rates did you rely on in your Constant**  
19 **Growth DCF model?**

20 A: My Constant Growth DCF model incorporated three sources of long-term growth  
21 rates: (1) consensus long-term earnings growth estimates from Zacks Investment

1 Research (“Zacks”); (2) consensus long-term earnings growth estimates from  
2 Thomson First Call (provided by Yahoo! Finance); and (3) long-term earnings growth  
3 estimates from Value Line.

4 **Q: How did you calculate the expected dividend yield?**

5 A: I adjusted the dividend yield to reflect the growth rate that was being used in that  
6 particular scenario. This ensures that the growth rate used in the dividend yield  
7 calculation and the growth rate used as the “g” term of the DCF model are internally  
8 consistent.

9 **Q: How did you calculate a range of results for the Constant Growth DCF model?**

10 A: I calculated the low-end result for the Constant Growth DCF model using the lowest  
11 projected earnings growth rate (*i.e.*, the lowest of Thomson First Call, Zacks, and  
12 Value Line) for each of the proxy group companies. I calculated the high-end result  
13 by using the highest projected earnings growth rate of the three sources for each  
14 proxy group company. I calculated the mean results using the mean growth rate of  
15 the three sources for each proxy group company.

16 **Q: Please summarize the results of your Constant Growth DCF analyses?**

17 A: Figure 9 (see also Schedule AEB-D2, Attachment 2) summarizes the results of my  
18 DCF analyses. As shown, when the average of the three EPS growth rates for each  
19 of the proxy group companies is utilized, the median DCF results range from 9.34  
20 percent to 9.41 percent. When the maximum of the three EPS growth rates for each  
21 of the proxy group companies is utilized, the median DCF results range from 10.38

1       percent to 10.53 percent. While I also summarize the median DCF results relying  
2       on the minimum growth rate for each proxy group company, I do not believe that  
3       these DCF results provide a reasonable spread over the expected yields on  
4       Treasury bonds to compensate investors for the incremental risk related to an equity  
5       investment.

**FIGURE 9: SUMMARY OF CONSTANT GROWTH DCF RESULTS**

<i>Constant Growth DCF</i>			
	Minimum Growth Rate (Median)	Average Growth Rate (Median)	Maximum Growth Rate (Median)
30-Day Average	8.11%	9.34%	10.38%
90-Day Average	8.09%	9.37%	10.37%
180-Day Average	8.21%	9.41%	10.53%
Constant Growth Average	8.14%	9.37%	10.43%

6       **Q: What are your conclusions about the results of the Constant Growth DCF**  
7       **model?**

8       A: As discussed previously, one primary assumption of the DCF model is a constant  
9       P/E ratio. That assumption is heavily influenced by the market price of utility stocks.  
10      Since utility stocks are expected to underperform the broader market over the near-  
11      term as interest rates increase, it is important to consider the results of the DCF  
12      model with caution because the DCF model tends to understate the cost of equity in  
13      rising interest rate and higher inflationary environments, which, as discussed  
14      previously, currently exist. Therefore, while I have given weight to the results of the  
15      Constant Growth DCF model, my recommendation also gives weight to the results  
16      of other ROE estimation models.

## VI.C. Capital Asset Pricing Model

**Q: Please briefly describe the CAPM.**

A: The CAPM is a risk premium approach that estimates the cost of equity for a given security as a function of a risk-free return plus a risk premium to compensate investors for the non-diversifiable or “systematic” risk of that security. This second component is the product of the market risk premium and the beta coefficient, which measures the relative riskiness of the security being evaluated.

The CAPM is defined by four components, each of which must theoretically be a forward-looking estimate:

$$K_e = r_f + \beta(r_m - r_f) \quad [3]$$

Where:

$K_e$  = the required market ROE;

$\beta$  = beta coefficient of an individual security;

$r_f$  = the risk-free ROR; and

$r_m$  = the required return on the market as a whole.

In this specification, the term  $(r_m - r_f)$  represents the market risk premium. According to the theory underlying the CAPM, since unsystematic risk can be diversified away, investors should only be concerned with systematic or non-diversifiable risk. Non-diversifiable risk is measured by beta, which is defined as:

$$\beta = \frac{\text{Covariance}(r_e, r_m)}{\text{Variance}(r_m)} \quad [4]$$

1 The variance of the market return (*i.e.*, Variance ( $r_m$ )) is a measure of the uncertainty  
2 of the general market, and the covariance between the return on a specific security  
3 and the general market (*i.e.*, Covariance ( $r_e$ ,  $r_m$ )) reflects the extent to which the  
4 return on that security will respond to a given change in the general market return.  
5 Thus, beta represents the risk of the security relative to the general market.

6 **Q: What risk-free rate did you use in your CAPM analysis?**

7 A: In my CAPM analysis, I utilized three estimates of the risk-free rate: (1) the current  
8 30-day average yield on 30-year U.S. Treasury bonds, which is 3.18 percent;<sup>52</sup> (2)  
9 the projected 30-year U.S. Treasury bond yield for Q4 2022 through Q4 2023 (*i.e.*,  
10 3.74 percent);<sup>53</sup> and (3) the projected 30-year U.S. Treasury bond yield for 2023  
11 through 2027 (*i.e.*, 3.80 percent).<sup>54</sup>

12 **Q: Would you place more weight on one of these scenarios?**

13 A: Yes. Based on current market conditions, I place more weight on the results of the  
14 projected yields on the 30-year Treasury bonds. As discussed previously, the  
15 estimation of the cost of equity in this case should be forward-looking because it is  
16 the return that investors would receive over the future rate period. Therefore, the  
17 inputs and assumptions used in the CAPM analysis should reflect the expectations  
18 of the market at that time. While I have included the results of a CAPM analysis that  
19 relies on the current average risk-free rate, this analysis fails to take into

---

<sup>52</sup> Bloomberg Professional, as of June 30, 2022.

<sup>53</sup> Blue Chip Financial Forecasts, Vol. 41, No. 7, July 1, 2022, at 2.

<sup>54</sup> Blue Chip Financial Forecasts, Vol. 41, No. 6, June 1, 2022, at 14.

1 consideration the effect of the market's expectations for interest rate increases on  
2 the cost of equity.

3 **Q: What beta coefficients did you use in your CAPM analysis?**

4 A: As shown in Schedule AEB-D2, Attachment 4, I used the average beta coefficients  
5 for the proxy group companies as reported by Bloomberg and Value Line. The beta  
6 coefficients reported by Bloomberg are based on ten years of weekly returns relative  
7 to the S&P 500 Index. The beta coefficients reported by Value Line are based on  
8 five years of weekly returns relative to the New York Stock Exchange Composite  
9 Index. As shown in Schedule AEB-D2, Attachment 3, I also considered an additional  
10 CAPM analysis that relies on the long-term average utility beta coefficient for the  
11 companies in the proxy group, which is calculated as an average of the beta  
12 coefficients reported by Value Line from 2016 through 2021.

13 **Q: How did you estimate the market risk premium in the CAPM?**

14 A: I estimated the market risk premium as the difference between the implied expected  
15 equity market return and the risk-free rate. The expected market return on the S&P  
16 500 Index is calculated using the Constant Growth DCF model discussed earlier in  
17 my testimony for the companies in the S&P 500 Index for which dividend yields and  
18 Value Line long-term earnings projections are available. As shown in Schedule  
19 AEB-D2, Attachment 6, based on an estimated market capitalization-weighted  
20 dividend yield of 1.83 percent and a weighted long-term growth rate of 11.02  
21 percent, the estimated required market return for the S&P 500 Index is 12.94

1           percent. The implied market risk premium over the risk-free rates (*i.e.*, the current,  
2           near-term projected and longer-term projected 30-year U.S. Treasury bond yield)  
3           ranges from 9.14 percent to 9.76 percent.

4   **Q: How does the current expected market return compare to observed historical**  
5   **returns?**

6   A: Given the range of annual equity returns that have been observed over the past  
7   century as shown in Figure 10, a current expected equity return of 12.94 percent is  
8   not unreasonable. In 50 out of the past 96 years (or roughly 52 percent of  
9   observations), the realized equity return was at least 12.94 percent.

1

**FIGURE 10: REALIZED U.S. EQUITY MARKET RETURNS (1926-2021)<sup>55</sup>**

2

3 **Q: Did you consider another form of the CAPM in your analysis?**

4 A: Yes. I have also considered the results of an ECAPM in estimating the cost of equity  
5 for the Company.<sup>56</sup> The ECAPM calculates the product of the adjusted beta  
6 coefficient and the market risk premium and applies a weight of 75.00 percent to  
7 that result. The model then applies a 25.00 percent weight to the market risk  
8 premium, without any effect from the beta coefficient. The results of the two  
9 calculations are summed, along with the risk-free rate, to produce the ECAPM result,  
10 as noted in Equation [5] below:

---

<sup>55</sup> Depicts total annual returns on large company stocks, as reported in the 2022 Duff & Phelps SBI Yearbook.

<sup>56</sup> See e.g., Roger A. Morin, *New Regulatory Finance*, Public Utilities Reports, Inc., 2006, at 189.

1 
$$k_e = r_f + 0.75\beta(r_m - r_f) + 0.25(r_m - r_f) \quad [5]$$

2 Where:

3  $k_e$  = the required market ROE

4  $\beta$  = Adjusted beta coefficient of an individual security

5  $r_f$  = the risk-free rate of return

6  $r_m$  = the required return on the market as a whole

7 In essence, the ECAPM addresses the tendency of the “traditional” CAPM to  
8 underestimate the cost of equity for companies with beta coefficients less than 1.00  
9 such as regulated utilities. In that regard, the ECAPM is not redundant to the use of  
10 adjusted betas reflected in the analysis, but rather recognizes the results of  
11 academic research indicating that the risk-return relationship is different (in essence,  
12 flatter) than estimated by the CAPM, and that the CAPM underestimates the “alpha,”  
13 or the constant return term.<sup>57</sup>

14 The ECAPM analysis relies on the same inputs as used in the CAPM (*i.e.*, the  
15 current, near-term and longer-term yields on the 30-year Treasury bond as the risk-  
16 free rate; the forward-looking market risk premium estimates; and the Bloomberg,  
17 Value Line and long-term average beta coefficients).

18 **Q: What are the results of your CAPM and ECAPM analyses?**

19 A: Figure 11 (and also Schedule AEB-D2, Attachment 4) presents the range of the  
20 results produced by the CAPM and ECAPM analyses. As shown, the traditional

---

<sup>57</sup> *Id.*, at 191.

1 CAPM analysis produces a range of returns from 10.47 percent to 11.73 percent.  
2 The ECAPM analysis results range from 11.09 percent to 12.03 percent.

**FIGURE 11: SUMMARY OF CAPM / ECAPM RESULTS**

	<b>CAPM</b>		
	Current 30-day Average Treasury Bond Yield	Near-Term Blue Chip Forecast Yield	Long-Term Blue Chip Forecast Yield
Value Line Beta	11.65%	11.73%	11.73%

Long-term Avg. Beta	11.09%	11.19%	11.20%

3 **VI.D. Bond Yield Plus Risk Premium Analysis**

4 **Q: Please describe the Bond Yield Plus Risk Premium analysis?**

5 A: In general terms, this approach is based on the fundamental principle that equity  
6 investors bear the residual risk associated with equity ownership and therefore  
7 require a premium over the return they would have earned as a bondholder. That  
8 is, because returns to equity holders have greater risk than returns to bondholders,  
9 equity investors must be compensated to bear that risk. Risk premium approaches,  
10 therefore, estimate the cost of equity as the sum of the equity risk premium and the  
11 yield on a particular class of bonds. In my analysis, I used actual authorized returns  
12 for electric utility companies as the historical measure of the cost of equity to  
13 determine the risk premium.

1 **Q: Are there other considerations that should be addressed in conducting this**  
2 **analysis?**

3 A: Yes. It is important to recognize both academic literature and market evidence  
4 indicating that the equity risk premium (as used in this approach) is inversely related  
5 to the level of interest rates. That is, as interest rates increase (decrease), the equity  
6 risk premium decreases (increases). Consequently, it is important to develop an  
7 analysis that: (1) reflects the inverse relationship between interest rates and the  
8 equity risk premium; and (2) relies on recent and expected market conditions. Such  
9 an analysis can be developed based on a regression of the risk premium as a  
10 function of U.S. Treasury bond yields. If we let authorized ROEs for electric utilities  
11 serve as the measure of required equity returns and define the yield on the long-  
12 term U.S. Treasury bond as the relevant measure of interest rates, the risk premium  
13 simply would be the difference between those two points.<sup>58</sup>

14 **Q: Is the Bond Yield Plus Risk Premium analysis relevant to investors?**

15 A: Yes. Investors are aware of ROE awards in other jurisdictions, and they consider  
16 those awards as a benchmark for a reasonable level of equity returns for utilities of  
17 comparable risk operating in other jurisdictions. Because my Bond Yield Plus Risk  
18 Premium analysis is based on authorized ROEs for utility companies relative to

---

<sup>58</sup> See e.g., S. Keith Berry, *Interest Rate Risk and Utility Risk Premia during 1982-93*, Managerial and Decision Economics, Vol. 19, No. 2 (March, 1998), in which the author used a methodology similar to the regression approach described below, including using allowed ROEs as the relevant data source, and came to similar conclusions regarding the inverse relationship between risk premia and interest rates. See also Robert S. Harris, *Using Analysts' Growth Forecasts to Estimate Shareholders Required Rates of Return*, Financial Management, Spring 1986, at 66.

1 corresponding Treasury yields, it provides relevant information to assess the return  
2 expectations of investors.

3 **Q: Did you conduct an analysis of the relationship between equity risk premia  
4 and interest rates?**

5 A: Yes. As shown in Figure 12, from 1992 through June 2022, there was a strong  
6 negative relationship between risk premia and interest rates. To estimate that  
7 relationship, I conducted a regression analysis using the following equation:

$$8 \qquad RP = a + b(T) \qquad [6]$$

9 Where:

10 RP = Risk Premium (difference between allowed ROEs and the  
11 yield on 30-year U.S. Treasury bonds)

12 a = intercept term

13 b = slope term

14 T = 30-year U.S. Treasury bond yield

15 Data regarding allowed ROEs were derived from vertically integrated electric utility  
16 rate cases from 1992 through June 2022 as reported by Regulatory Research  
17 Associates (“RRA”).<sup>59</sup> This equation’s coefficients were statistically significant at the  
18 99.00 percent level.

---

<sup>59</sup> Authorized ROE results from limited issue rider cases, transmission-only cases, distribution cases, and cases that were silent with respect to the authorized ROE are excluded from this analysis.

**FIGURE 12: RELATIONSHIP OF RISK PREMIA AND INTEREST RATES**

1  
2 **Q: Based on the relationship between equity risk premia and interest rates, what**  
3 **are the results of your Bond Yield Plus Risk Premium analysis?**

4 **A:** Figure 13 presents the results of my Bond Yield Plus Risk Premium analysis based  
5 on the current and projected interest rates used in my CAPM and ECAPM analyses:  
6 (1) the current 30-day average yield on 30-year U.S. Treasury bonds; (2) the near-  
7 term projected 30-year U.S. Treasury bond yield; and (3) the long-term projected  
8 30-year U.S. Treasury bond yield.

**FIGURE 13: BOND YIELD PLUS RISK PREMIUM RESULTS**

<b><i>Bond Yield Plus Risk Premium</i></b>			
	Current 30-day Average Treasury Bond Yield	Near-Term Blue Chip Forecast Yield	Long-Term Blue Chip Forecast Yield
Risk Premium Results	10.03%	10.27%	10.29%

1 **Q: How did the results of the Bond Yield Plus Risk Premium inform your**  
2 **recommended ROE for the Company?**

3 A: I have considered the results of the Bond Yield Plus Risk Premium analysis in setting  
4 my recommended ROE in this proceeding. As noted, investors consider the ROE  
5 determination by a regulator when assessing the risk of that company as compared  
6 to utilities of comparable risk operating in other jurisdictions. The risk premium  
7 analysis takes into account this comparison by estimating the return expectations of  
8 investors based on the current and past ROE awards of electric utilities across the  
9 U.S.

## 10 **VII. REGULATORY AND BUSINESS RISKS**

11 **Q: Do the DCF, CAPM, and ECAPM results for the proxy group, taken alone,**  
12 **provide an appropriate estimate of the cost of equity for the Company?**

13 A: No. These results provide only a range of the appropriate estimate of the Company's  
14 cost of equity. There are several additional factors that must be taken into  
15 consideration when determining where the Company's cost of equity falls within the  
16 range of results. These factors, which are discussed below, should be considered  
17 with respect to their overall effect on the Company's risk profile.

## **VII.A. Capital Expenditures**

**Q: Please summarize the Company's capital expenditure requirements.**

A: The Company currently plans to invest in significant capital expenditures from 2022 through 2026, largely associated with its Smart Energy Plan enabled by the Missouri Legislature's passage of Senate Bill 564 in 2018 and as amended in 2022. As Company witness Warren Wood describes in more detail in his direct testimony, the Smart Energy Plan is designed to upgrade Ameren Missouri's electric infrastructure through grid modernization investments as well as to accommodate more renewable energy.<sup>60</sup>

**Q: How is the Company's risk profile affected by its substantial capital expenditure requirements?**

A: As with any utility faced with substantial capital expenditure requirements, the Company's risk profile may be adversely affected in two significant and related ways: (1) the heightened level of investment increases the risk of under-recovery or delayed recovery of the invested capital; and (2) an inadequate return would put downward pressure on key credit metrics.

**Q: Do credit rating agencies recognize the risks associated with elevated levels of capital expenditures?**

A: Yes. From a credit perspective, the additional pressure on cash flows associated with high levels of capital expenditures exerts corresponding pressure on credit

---

<sup>60</sup> Ameren Corporation, Form 10-K, February 22, 2022, at 22 and 40.

1 metrics and, therefore, credit ratings. To that point, S&P explains the importance  
2 of regulatory support for a significant amount of capital projects:

3 \*\* \_\_\_\_\_  
4 \_\_\_\_\_  
5 \_\_\_\_\_  
6 \_\_\_\_\_  
7 \_\_\_\_\_  
8 \_\_\_\_\_  
9 \_\_\_\_\_  
10 \_\_\_\_\_  
11 \_\_\_\_\_  
12 \_\_\_\_\_  
13 \_\_\_\_\_  
14 \_\_\_\_\_  
15 \_\_\_\_\_  
16 \_\_\_\_\_  
17 \_\_\_\_\_  
18 \_\_\_\_\_  
19 \_\_\_\_\_ \*\*61

20 Therefore, to the extent that Ameren Missouri’s rates do not continue to permit the  
21 recovery its capital investments on a regular basis, the Company would face  
22 increased recovery risk and thus increased pressure on its credit metrics.

23 **Q: Does Ameren Missouri have cost recovery mechanisms in place to recover**  
24 **the costs associated with its capital expenditures plan between rate cases?**

25 A: Yes. Ameren Missouri has implemented Plant-In-Service Accounting (“PISA”),  
26 which was established in 2018 through Senate Bill 564 and amended by Senate Bill  
27 745 in 2022. PISA provides for the deferral of 85 percent of the depreciation and

---

<sup>61</sup> S&P Global Ratings, “Assessing U.S. Investor-Owned Utility Regulatory Environments,” August 10, 2016, at 7.

1 return on capital investment between rate cases. Specifically, Senate Bill 564, as  
2 amended by Senate Bill 745, provides that utilities who elect to use PISA shall:

3 [D]efer to a regulatory asset eighty-five percent of all depreciation  
4 expense and return associated with all qualifying electric plant  
5 recorded to plant-in-service on the utility's books... In each general  
6 rate proceeding concluded after the effective date of this section, the  
7 balance of the regulatory asset as of the rate base cutoff date shall  
8 be included in the electrical corporation's rate base without any  
9 offset, reduction, or adjustment based upon consideration of any  
10 other factor...<sup>62</sup>

11 Thus, the PISA permits Ameren Missouri to defer and recover 85 percent of the  
12 depreciation expense and earn a return at the applicable WACC on investments in  
13 certain property, plant, and equipment placed in service, and not included in base  
14 rates. The regulatory asset for accumulated PISA deferrals also earns a return at  
15 the applicable WACC, with all approved PISA deferrals added to rate base  
16 prospectively and recovered over a period of 20 years following a regulatory rate  
17 review.

18 **Q: Is PISA limited in any respects?**

19 **A:** Yes. The amended statute governing PISA has an expiration date on the deferrals  
20 of December 31, 2028, after which time regulatory approval for continuance through  
21 December 31, 2033 is required, and even if extended, the mechanism is set to  
22 permanently expire at the end of 2033. Also, there are caps on the impact to rate  
23 and revenue requirement that would limit the recovery through the PISA. Through

---

<sup>62</sup> Senate Bill No. 564, General Assembly of the State of Missouri 2018, as amended by SB 745, General Assembly of the State of Missouri 2022.

1 the end of 2023, Ameren Missouri's rate increases are limited to a 2.85 percent  
2 compound annual growth rate in the average overall customer rate per kilowatt-hour,  
3 based on the electric rates that became effective in April 2017, less half of the annual  
4 savings from the Tax Cuts and Jobs Act that were previously passed on to  
5 customers by the Company.<sup>63</sup> Therefore, if the rate cap is reached, the recovery of  
6 capital through the PISA is limited on a forward-looking basis, and the Company  
7 would depend on rate case filings for capital cost recovery. Post December 31,  
8 2023, the rate cap of a compound annual growth rate of 2.85 percent is being  
9 replaced by a cap on the revenue requirement impact of the PISA deferrals. This  
10 revenue requirement impact cap grows at a rate of 2.50 percent annually between  
11 rate reviews (e.g., if there are two years between rate reviews the impact of the PISA  
12 deferrals are capped at 5 percent).

13 **Q: Have credit rating agencies commented on PISA and the Company's ability to**  
14 **recover capital expenditures?**

15 A: Yes. Moody's has highlighted the constructive legislative and regulatory  
16 environment in Missouri, and that the Company benefits from PISA generally;  
17 however, has also noted that the limitations just discussed are credit negative,  
18 although mitigated by the fact that Moody's believes the Company has sufficient  
19 headroom under the cap so as to support the Company's cost recovery  
20 requirements.<sup>64</sup> Moody's has stated that, "[n]evertheless, regulatory lag remains

---

<sup>63</sup> Ameren Corporation, Form 10-K, February 22, 2022, at 22.

<sup>64</sup> Moody's Investors Service, Inc., Credit Opinion, Union Electric Company, September 13, 2021, at 1.

1 due to the use of historical test year, limited infrastructure trackers or riders.”<sup>65</sup>

2 Moody’s provided more detail stating:

3 \*\* \_\_\_\_\_  
4 \_\_\_\_\_  
5 \_\_\_\_\_  
6 \_\_\_\_\_  
7 \_\_\_\_\_  
8 \_\_\_\_\_  
9 \_\_\_\_\_  
10 \_\_\_\_\_  
11 \_\_\_\_\_  
12 \_\_\_\_\_  
13 \_\_\_\_\_ \*\*66

14 Similarly, prior to its approval, S&P noted that approving the extension of the PISA  
15 through December 31, 2033 would reduce regulatory lag for the Company beyond  
16 the prior sunset date in 2028.<sup>67</sup>

17 **Q: How does Ameren Missouri’s capital cost recovery compare to the operating**  
18 **subsidiaries of the proxy group companies?**

19 A: As shown in Schedule AEB-D2 Attachment 10, there are a number of cost recovery  
20 mechanisms in place for the operating subsidiaries of the proxy group companies,  
21 including forecasted test years, year-end rate base convention, revenue decoupling,  
22 formula-based rates, straight-fixed variable rate design, and capital cost recovery  
23 mechanisms and/or the opportunity for construction work in progress (“CWIP”) in

---

<sup>65</sup> Moody’s Investors Service, Inc., Credit Opinion, Union Electric Company, April 3, 2020, at 1.

<sup>66</sup> *Id.*, at 3-4.

<sup>67</sup> S&P Global Ratings, Ratings Direct, Union Electric Co. d/b/a Ameren Missouri, April 28, 2021, at 2.

1 rate base. Approximately 55 percent of the operating subsidiaries of the proxy group  
2 companies recover costs through some form of capital tracking mechanism.  
3 Ameren Missouri does not have many of these mechanisms, and Missouri law  
4 prohibits CWIP in rate base.<sup>68</sup> Further, while Ameren Missouri is limited from  
5 earning a return on CWIP by Missouri statutes, which can reduce regulatory lag, the  
6 opportunity to earn a return on CWIP is available for 82% of the operating  
7 subsidiaries of the proxy group companies.

8 **Q: Does the Company have any other cost recovery mechanisms?**

9 A: Yes. The Company also has the Renewable Energy Standard Rate Adjustment  
10 Mechanism (“RESRAM”). The RESRAM enables the Company to recover between  
11 rate cases the costs relating to compliance with Missouri’s renewable energy  
12 standard, including investments in wind generation and other renewables.<sup>69</sup> Under  
13 the RESRAM, the Company can earn a return at the applicable weighted average  
14 cost of capital on those investments not already recovered elsewhere from  
15 customers.<sup>70</sup> Additionally, under the RESRAM, Ameren Missouri is permitted to  
16 recover the 15% of depreciation expense and return not deferred and recovered  
17 under the PISA mechanism for RESRAM eligible investments.<sup>71</sup>

---

<sup>68</sup> S&P Capital IQ Pro, Commission Profiles, Missouri.

<sup>69</sup> Missouri Statute Section 393.1030.2(4).

<sup>70</sup> Ameren Corporation, Form 10-K, February 22, 2022, at 3.

<sup>71</sup> *Id.*, at 67-68.

1 **Q: Is regulatory lag eliminated by the PISA and RESRAM mechanisms?**

2 A: No, not entirely. As noted, PISA is applied to only 85 percent of the depreciation  
3 and return for certain qualified investments. In addition, while PISA does allow  
4 deferral of depreciation and return on 85 percent of the eligible investment, the  
5 utility's net income is negatively impacted between rate cases because the equity  
6 portion of that return cannot be included in the utility's reported earnings. Moreover,  
7 the return associated with the remaining 15 percent of investment not included in  
8 the PISA recovery mechanism and not otherwise recovered through the RESRAM,  
9 is foregone until rates are reset in the next rate proceeding. Further, while PISA  
10 provides a process for including new projects in rate base, PISA does not provide  
11 the ability to put CWIP into rate base. Rather, PISA only provides a process for  
12 getting completed projects into rate base. Therefore, this mechanism does not  
13 provide earnings and cash flow relief similar to other jurisdictions where CWIP  
14 can be placed into rate base.

15 **Q: What are your conclusions regarding the effect of the Company's capital**  
16 **spending requirements on its risk profile and cost of capital?**

17 A: The Company's capital expenditure requirements are significant and will continue at  
18 least through 2026. Additionally, while Ameren Missouri has the PISA and RESRAM  
19 mechanisms to recover a portion of qualifying capital costs, the mechanisms do not  
20 provide for timely recovery of all of Ameren Missouri's capital expenditures.  
21 Considering a number of the operating subsidiaries of the proxy group have a capital  
22 tracking mechanism and/or are able to include CWIP in rate base, in comparison,

1 the Company lacks a comprehensive forward-looking mechanism or set of  
2 mechanisms, such as including CWIP in rate base, that would remedy the regulatory  
3 lag it faces. As a result, the Company has relatively greater risk of timely cost  
4 recovery and earnings potential as compared to the proxy group companies.

## 5 **VII.B. Regulatory Risk**

6 **Q: How does the regulatory environment affect investors' risk assessments?**

7 A: The ratemaking process is premised on the principle that, for investors and  
8 companies to commit the capital needed to provide safe and reliable utility service,  
9 the subject utility must have the opportunity to recover the return of, and the market-  
10 required return on, invested capital. Regulatory authorities recognize that because  
11 utility operations are capital intensive, regulatory decisions should enable the utility  
12 to attract capital at reasonable terms; doing so balances the long-term interests of  
13 investors and customers. The Company is no exception. Ameren Missouri must  
14 finance its operations and requires the opportunity to earn a reasonable return on  
15 its invested capital to maintain its financial profile. In that respect, the regulatory  
16 environment is one of the most important factors considered in both debt and equity  
17 investors' risk assessments.

18 From the perspective of debt investors, the authorized return should enable the  
19 Company to generate the cash flow needed to meet its near-term financial  
20 obligations, make the capital investments needed to maintain and expand its  
21 system, and maintain the necessary levels of liquidity to fund unexpected events.  
22 This financial liquidity must be derived not only from internally generated funds, but

1 also by efficient access to capital markets. Moreover, because fixed income  
2 investors have many investment alternatives, even within a given market sector, the  
3 Company's financial profile must be adequate on a relative basis to ensure its ability  
4 to attract capital under a variety of economic and financial market conditions.

5 Equity investors, on the other hand, require that the authorized return be adequate  
6 to provide a risk-comparable return on the equity portion of the Company's capital  
7 investments. Because equity investors are the residual claimants on the Company's  
8 cash flows (which is to say that the equity return is subordinate to debt repayment),  
9 they are particularly concerned with the strength of regulatory support and its effect  
10 on future earnings and cash flows.

11 **Q: How do credit rating agencies consider regulatory risk in establishing a**  
12 **company's credit rating?**

13 A: Both S&P and Moody's consider the overall regulatory framework in establishing  
14 credit ratings. Moody's establishes credit ratings based on four key factors: (1)  
15 regulatory framework; (2) the ability to recover costs and earn returns; (3)  
16 diversification; and (4) financial strength, liquidity, and key financial metrics. Of these  
17 criteria, regulatory framework, and the ability to recover costs and earn returns are  
18 each given a broad rating factor of 25.00 percent. Therefore, Moody's assigns  
19 regulatory risk a 50.00 percent weighting in the overall assessment of business and  
20 financial risk for regulated utilities.<sup>72</sup>

---

<sup>72</sup> Moody's Investors Service, Inc., Rating Methodology: Regulated Electric and Gas Utilities, June 23, 2017, at 4.

1 S&P also identifies the regulatory framework as an important factor in credit ratings  
2 for regulated utilities, stating: “One significant aspect of regulatory risk that  
3 influences credit quality is the regulatory environment in the jurisdictions in which a  
4 utility operates.”<sup>73</sup> S&P identifies four specific factors that it uses to assess the credit  
5 implications of the regulatory jurisdictions of investor-owned regulated utilities: (1)  
6 regulatory stability; (2) tariff-setting procedures and design; (3) financial stability; and  
7 (4) regulatory independence and insulation.<sup>74</sup>

8 **Q: How does the regulatory environment in which a utility operates affect its**  
9 **access to and cost of capital?**

10 A: The regulatory environment can significantly affect both the access to and cost of  
11 capital in several ways. First, the proportion and cost of debt capital available to  
12 utility companies are influenced by the rating agencies’ assessment of the regulatory  
13 environment. As noted by Moody’s, “[f]or rate regulated utilities, which typically  
14 operate as a monopoly, the regulatory environment and how the utility adapts to that  
15 environment are the most important credit considerations.”<sup>75</sup> Moody’s further  
16 highlights the relevance of a stable and predictable regulatory environment to a  
17 utility’s credit quality, noting: “[b]roadly speaking, the Regulatory Framework is the  
18 foundation for how all the decisions that affect utilities are made (including the setting

---

<sup>73</sup> Standard & Poor’s Global Ratings, Ratings Direct, U.S. and Canadian Regulatory Jurisdictions Support Utilities’ Credit Quality—But Some More So Than Others, June 25, 2018, at 2.

<sup>74</sup> *Id.*, at 1.

<sup>75</sup> Moody’s Investors Service, Inc., Rating Methodology: Regulated Electric and Gas Utilities, June 23, 2017, at 6.

1 of rates), as well as the predictability and consistency of decision-making provided  
2 by that foundation.”<sup>76</sup>

3 **Q: Have you evaluated the regulatory framework in Missouri relative to the**  
4 **jurisdictions in which the operating companies of the proxy group members**  
5 **operate?**

6 A: Yes. I have evaluated the regulatory framework in Missouri on four factors that are  
7 important in terms of providing a regulated utility an opportunity to earn its authorized  
8 ROE. These are: (1) test year convention (*i.e.*, forecast vs. historical test year); (2)  
9 method for determining rate base (*i.e.*, average vs. year-end); (3) use of revenue  
10 decoupling mechanisms or other tools to mitigate volumetric risk; and (4) prevalence  
11 of capital cost recovery between rate cases.

12 **Q: What are the results of your analysis?**

13 A: The results of my regulatory risk assessment are summarized as follows, and the  
14 details are shown in Schedule AEB-D2, Attachment 10. Specifically:

15 Test Year Convention: Ameren Missouri uses a historical test year with limited  
16 “known and measurable” changes through a true-up period.<sup>55</sup> By contrast, 52  
17 percent of the operating companies of the proxy group provide service in  
18 jurisdictions that use a fully- or partially-forecasted test year.

19 Rate Base Convention: The Company’s rate base is determined using the  
20 year-end rate base method, meaning that the rate base includes capital  
21 additions that occurred in the second half of the test year and is more reflective  
22 of net utility plant going forward. Approximately 45 percent of the companies  
23 in the proxy group are also authorized to use year-end rate base.

---

<sup>76</sup> *Id.*

1            *Volumetric Risk:* Ameren Missouri does have partial protection against  
2 volumetric risk in Missouri through an Energy Efficiency Adjustment Charge;  
3 however, this charge only allows the Company to recover the costs associated  
4 with the impact on sales from energy efficiency and does not address other  
5 volumetric risk. By comparison, 54 percent of the operating companies in the  
6 proxy group also have some form of protection against volumetric risk through  
7 either revenue decoupling, formula-based rates and/or straight-fixed variable  
8 rate design.

9            *Capital Cost Recovery:* As discussed, Ameren Missouri has capital tracking  
10 mechanisms (*i.e.*, PISA and the RESRAM for renewable energy standard  
11 compliance assets) to recover capital investment costs between rate cases.  
12 However, as discussed previously, Ameren Missouri's PISA capital cost  
13 recovery mechanism has limitations, including that it is applicable to only 85  
14 percent of the investment, has a rate cap (through 2023), and has a PISA  
15 revenue requirement impact cap starting in 2024. Similarly, approximately 55  
16 percent of the operating companies held by the proxy group have some form  
17 of capital cost recovery mechanism in place.

18            *Fuel Adjustment Clause:* Ameren Missouri's fuel adjustment clause allows the  
19 Company to defer and recover 95 percent of the difference between the actual  
20 net energy costs and net base energy costs.<sup>77</sup> Fuel adjustment clause  
21 mechanisms are prevalent for the operating subsidiaries of the proxy  
22 companies, as 97 percent of the operating companies in the proxy group are  
23 allowed to directly recover fuel costs and purchased power costs from  
24 customers, without either a dead band or sharing band. Since FAC  
25 mechanisms are prevalent in the proxy group, the continuation of a FAC for  
26 Ameren Missouri makes the Company more comparable to the proxy group.  
27 To the extent that the fuel adjustment clause were eliminated, or materially  
28 restructured to recover a smaller proportion of the actual fuel costs, Ameren  
29 Missouri would have greater risk than the proxy group and would likely require  
30 an upward adjustment to the ROE to reflect this incremental risk.

---

<sup>77</sup> File No. ER-2019-0335, In the Matter of Union Electric Company d/b/a Ameren Missouri's Tariffs to Decrease Its Revenues for Electric Service, Non-Unanimous Stipulation and Agreement, Exhibit F.

1 **Q: Have you developed any additional analyses to evaluate the regulatory**  
2 **environment in Missouri as compared to the jurisdictions in which the**  
3 **companies in your proxy group operate?**

4 A: Yes. I have conducted two additional analyses to compare the regulatory framework  
5 of Missouri to the jurisdictions in which the companies in the proxy group operate.  
6 Specifically, I considered two different rankings: (1) RRA's ranking of regulatory  
7 jurisdictions; and (2) S&P's ranking of the credit supportiveness of regulatory  
8 jurisdictions.

9 **Q: Please explain how you used the RRA ratings to compare the regulatory**  
10 **jurisdictions of the proxy companies with the Company's regulatory**  
11 **jurisdiction?**

12 A: RRA develops their ranking based on their assessment of how investors perceive  
13 the regulatory risk associated with ownership of utility securities in that jurisdiction,  
14 specifically reflecting their assessment of the probable level and quality of earnings  
15 to be realized by the state's utilities as a result of regulatory, legislative, and court  
16 actions. RRA assigns a ranking for each regulatory jurisdiction as "Above Average",  
17 "Average" or "Below Average", and then within each of those categories, a numeric  
18 ranking from 1 to 3. Thus, there are a total of nine RRA rankings, with the rankings  
19 for each jurisdiction ranging from "Above Average/1", which is considered the most  
20 supportive, to "Below Average/3," which is the least supportive. I applied a numeric  
21 ranking system to the RRA rankings with "Above Average/1" assigned the highest  
22 ranking (*i.e.*, a "1") and "Below Average/3" assigned the lowest ranking (*i.e.*, a "9").

1 As shown on Schedule AEB-D2, Attachment 11, the Missouri jurisdictional ranking  
2 is “Average / 3” (*i.e.*, a “6”), which is below the proxy group average ranking of  
3 between “Average/1” and “Average/2” (*i.e.*, a “4.5”).

4 **Q: How did you conduct your analysis of the S&P credit supportiveness?**

5 A: For credit supportiveness, S&P classifies each regulatory jurisdiction into five  
6 categories that range from “Most Credit Supportive” down to “Credit Supportive.” My  
7 analysis of the credit supportiveness of the regulatory jurisdictions in which the proxy  
8 companies operate as compared to the Company’s regulatory jurisdiction was  
9 similar to the analysis of the RRA overall regulatory ranking discussed above.  
10 Specifically, I assigned a numerical ranking to each category, from Most Credit  
11 Supportive (*i.e.*, a “1”) to Credit Supportive (*i.e.*, a “5”). As shown on Schedule AEB-  
12 D2, Attachment 12, similar to the RRA regulatory rankings discussed above, the  
13 Missouri jurisdictional classification of “Very Credit Supportive” (*i.e.*, a “3”) is below  
14 the proxy group average ranking of 2.43, which would be classified between “Highly  
15 Credit Supportive” and “Very Credit Supportive” (*i.e.*, a “2.43”).

16 **Q: Do investors consider the relative returns awarded in jurisdictions across the**  
17 **U.S.?**

18 A: Yes, they do. In fact, in a recent article from Barron’s, an equity analyst from  
19 KeyBanc Capital Markets, Inc. recommended buying shares in Duke Energy as  
20 opposed to Consolidated Edison for reasons which included that the regulatory

1 outcomes in the jurisdictions where Duke Energy operates were more favorable.  
2 Specifically, KeyBank analyst Sophie Karp noted:

3 The regulatory environment is favorable in Duke's major markets: the  
4 Carolinas, Florida, and Indiana. "There's not so much of the utility  
5 bashing that goes on down there as it is in New York routinely," says  
6 KeyBanc's Karp. "So they have more constructive outcomes. They  
7 have better returns." A starting point of below-average customer bills  
8 helps. So does healthy population growth. New York has neither.<sup>78</sup>

9 **Q: Do credit rating agencies consider the authorized ROE in the overall risk  
10 assessment of a utility?**

11 A: Yes, they do. To the extent that the returns in a jurisdiction are lower than the returns  
12 that have been authorized more broadly, credit rating agencies will consider this in  
13 the overall risk assessment of the regulatory jurisdiction in which the company  
14 operates. It is important to consider credit ratings because they affect the overall  
15 cost of borrowing, and they act as a signal to equity investors about the risk of  
16 investing in the equity of a company. Therefore, lower credit ratings can affect both  
17 the cost of debt and equity.

18 In addition to the credit rating downgrade experienced by PNW previously discussed  
19 as a result of a negative rate case outcome, examples of other recent credit rating  
20 agency responses include ALLETE, Inc. and CenterPoint Energy Houston Electric  
21 ("CEHE"). Specifically, in 2019, Moody's downgraded ALLETE, Inc. from A3 to Baa1  
22 primarily based on what Moody's noted was a below average authorized ROE of

---

<sup>78</sup> Hough, Jack, "3 Electric Utility Stocks to Give Your Portfolio a Jolt," Barron's, July 26, 2021; [www.barrons.com/articles/-utility-stocks-duke-energy-51627080936?mod=hp\\_columnists](http://www.barrons.com/articles/-utility-stocks-duke-energy-51627080936?mod=hp_columnists).

1 9.25 percent in Minnesota Power's fully litigated rate case in Minnesota.<sup>79</sup> Similarly,  
2 FitchRatings downgraded CEHE's Long-Term Issuer Default rating from A- to BBB+  
3 and revised the rating outlook from Stable to Negative following the approval of an  
4 unfavorable outcome in a recent rate case in Texas.<sup>80</sup>

## 5 **VIII. Conclusions And Recommendations**

6 **Q: What is your conclusion regarding a fair ROE for Ameren Missouri?**

7 A: Figure 14 provides a summary of my analytical results for the proxy group. Based  
8 on these results, the qualitative analyses presented herein, the current and projected  
9 conditions in capital markets including the expectation for rising interest rates and  
10 increase in inflationary pressure, and the business and financial risks of Ameren  
11 Missouri compared to the proxy group, it is my view that a ROE in the range of 9.90  
12 to 11.25 percent is reasonable, and that the Company's proposed ROE of 10.20  
13 percent is reasonable and would fairly balance the interests of customers and  
14 shareholders. This ROE would enable the Company to attract capital at reasonable  
15 rates under a variety of economic and financial market conditions, while continuing  
16 to provide safe, reliable, and affordable electric utility service to customers in  
17 Missouri.

[Ann.Bulkley@brattle.com](mailto:Ann.Bulkley@brattle.com)

With more than 25 years of experience in the energy industry, Ms. Bulkley specializes in regulatory economics for the electric and natural gas sectors, including rate of return, cost of equity, and capital structure issues.

Ms. Bulkley has extensive state and federal regulatory experience, and she has provided expert testimony on the cost of capital in nearly 100 regulatory proceedings before 32 state regulatory commissions and the Federal Energy Regulatory Commission (FERC).

In addition to her regulatory experience, Ms. Bulkley has provided valuation and appraisal services for a variety of purposes, including the sale or acquisition of utility assets, regulated ratemaking, ad valorem tax disputes, and other litigation purposes. In addition, she has experience in the areas of contract and business unit valuation, strategic alliances, market restructuring, and regulatory and litigation support.

Ms. Bulkley is a Certified General Appraiser licensed in the Commonwealth of Massachusetts and the State of New Hampshire.

Prior to joining Brattle, Ms. Bulkley was a Senior Vice President at an economic consultancy and held senior positions at several other consulting firms.

#### AREAS OF EXPERTISE

- Regulatory Economics, Finance & Rates
- Regulatory Investigations & Enforcement
- Tax Controversy & Transfer Pricing
- Electricity Litigation & Regulatory Disputes
- M&A Litigation

---

## EDUCATION

- **Boston University**  
MA in Economics
- **Simmons College**  
BA in Economics and Finance

---

## PROFESSIONAL EXPERIENCE

- **The Brattle Group (2022–Present)**  
Principal
- **Concentric Energy Advisors, Inc. (2002–2021)**  
Senior Vice President  
Vice President  
Assistant Vice President  
Project Manager
- **Navigant Consulting, Inc. (1997–2002)**  
Project Manager
- **Reed Consulting Group (1995-1997)**  
Consultant- Project Manager
- **Cahners Publishing Company (1995)**  
Economist

## SELECTED CONSULTING EXPERIENCE & EXPERT TESTIMONY

### REGULATORY ANALYSIS AND RATEMAKING

Have provided a range of advisory services relating to regulatory policy analysis and many aspects of utility ratemaking, with specific services including:

- Cost of capital and return on equity testimony, cost of service and rate design analysis and testimony, development of ratemaking strategies
- Development of merchant function exit strategies

- Analysis and program development to address residual energy supply and/or provider of last resort obligations
- Stranded costs assessment and recovery  
Performance-based ratemaking analysis and design
- Many aspects of traditional utility ratemaking (e.g., rate design, rate base valuation)

### **COST OF CAPITAL**

Have provided expert testimony on the cost of capital and capital structure in nearly 100 regulatory proceedings before state and federal regulatory commissions in the United States.

### **RATEMAKING**

Have assisted several clients with analysis to support investor-owned and municipal utility clients in the preparation of rate cases. Sample engagements include:

- Assisted several investor-owned and municipal clients on cost allocation and rate design issues including the development of expert testimony supporting recommended rate alternatives.
- Worked with Canadian regulatory staff to establish filing requirements for a rate review of a newly regulated electric utility. Along with analyzing and evaluating rate application, attended hearings and conducted investigation of rate application for regulatory staff. And prepared, supported, and defended recommendations for revenue requirements and rates for the company. Additionally, developed rates for gas utility for transportation program and ancillary services.

### **VALUATION**

Have provided valuation services to utility clients, unregulated generators, and private equity clients for a variety of purposes, including ratemaking, fair value, ad valorem tax, litigation and damages, and acquisition. Appraisal practices are consistent with the national standards established by the Uniform Standards of Professional Appraisal Practice.

Representative projects/clients have included:

- Prepared appraisals of electric utility transmission and distribution assets for ad valorem tax purposes.
- Prepared appraisals of several hydroelectric generating facilities for ad valorem tax purposes.
- Conducted appraisals of fossil fuel generating facilities for ad valorem tax purposes.
- Conducted appraisals of generating assets for the purposes of unwinding sale-leaseback agreements.
- For a confidential utility client, prepared valuation of fossil and nuclear generation assets for financing purposes for regulated utility client.

- Prepared a valuation of a portfolio of generation assets for a large energy utility to be used for strategic planning purposes. Valuation approach included an income approach, a real options analysis, and a risk analysis.
- Assisted clients in the restructuring of NUG contracts through the valuation of the underlying assets. Performed analysis to determine the option value of a plant in a competitively priced electricity market following the settlement of the NUG contract.
- Prepared market valuations of several purchase power contracts for large electric utilities in the sale of purchase power contracts. Assignment included an assessment of the regional power market, analysis of the underlying purchase power contracts, and a traditional discounted cash flow valuation approach, as well as a risk analysis. Analyzed bids from potential acquirers using income and risk analysis approaches. Prepared an assessment of the credit issues and value at risk for the selling utility.
- Prepared appraisal of a portfolio of generating facilities for a large electric utility to be used for financing purposes.
- Prepared fair value rate base analyses for Northern Indiana Public Service Company for several electric rate proceedings. Valuation approaches used in this project included income, cost, and comparable sales approaches.
- Prepared an appraisal of a fleet of fossil generating assets for a large electric utility to establish the value of assets transferred from utility property.
- Conducted due diligence on an electric transmission and distribution system as part of a buy-side due diligence team.
- Provided analytical support for and prepared appraisal reports of generation assets to be used in ad valorem tax disputes.
- Provided analytical support and prepared testimony regarding the valuation of electric distribution system assets in five communities in a condemnation proceeding.
- Prepared feasibility reports analyzing the expected net benefits resulting from municipal ownership of investor-owned utility operations.
- Prepared independent analyses of proposal for the proposed government condemnation of the investor-owned utilities in Maine and the formation of a public power district.
- Valued purchase power agreements in the transfer of assets to a deregulated electric market.

### **STRATEGIC AND FINANCIAL ADVISORY SERVICES**

Have assisted several clients across North America with analytically-based strategic planning, due diligence, and financial advisory services.

Representative projects include:

- Preparation of feasibility studies for bond issuances for municipal and district steam clients.
- Assisted in the development of a generation strategy for an electric utility. Analyzed various NERC regions to identify potential market entry points. Evaluated potential competitors and alliance partners. Assisted in the development of gas and electric price forecasts. Developed a framework for the implementation of a risk management program.
- Assisted clients in identifying potential joint venture opportunities and alliance partners. Contacted interviewed and evaluated potential alliance candidates based on company-established criteria for several LDCs and marketing companies. Worked with several LDCs and unregulated marketing companies to establish alliances to enter into the retail energy market. Prepared testimony in support of several merger cases and participated in the regulatory process to obtain approval for these mergers.
- Assisted clients in several buy-side due diligence efforts, providing regulatory insight and developing valuation recommendations for acquisitions of both electric and gas properties.
