Wm. Brett Burns

Dear Brett:

Thanks for working on this. I just wanted to note to you that there is both an underground electric line and a separate underground water line running from the current house at 2053 up to a well located on the 2045 property. The water line was placed many years ago so there is no trace on the surface of the ground above it. There maybe some trace of the electric line still present on the soil surface as it was placed about 1 ½ years ago but I do not know that for certain. I believe that both water and electric lines would run relatively perpendicular to the new underground powerline coming in so whoever is trenching or shooting a line underground needs to know about them. Thanks again.

Bob Robinson
