4	SPIRE MISSOURI, INC., d/b/a SPIRE						
5 6	LACLEDE GAS COMPANY and MISSOURI GAS ENERGY GENERAL RATE CASE						
7	CASE NOS. GR-2017-0215 AND GR-2017-0216						
8	Q. Please state your name and business address.						
9	А.	My name is Michael L. Stahlman, and my business address is Missouri Public					
10	Service Com	mission, P.O. Box 360, Jefferson City, Missouri, 65102.					
11	Q.	By whom are you employed and in what capacity?					
12	А.	I am employed by the Missouri Public Service Commission ("Commission")					
13	as a Regulate	ory Economist III in the Energy Rate Design & Tariffs Unit, Economic Analysis					
14	Section, of	the Tariff, Safety, Economic and Engineering Analysis Department in the					
15	Regulatory R	eview Division.					
16	Q.	Are you the same Michael L. Stahlman that supported sections in Staff's Class					
17	Cost of Servi	ce/Rate Design Report?					
18	А.	Yes.					
19	Q.	What is the purpose of your testimony?					
20	А.	The purpose of my rebuttal testimony is to respond to LAC and MGE witness					
21	Michael R. N	loack concerning the definition/applicability of residential customer and service,					
22	and MGE's a	and LAC's witnesses Glenn W. Buck, C. Eric Lobser, and Scott A. Weitzel,					
23	National Hou	sing Trust witness Annika Brink, and Division of Energy's witness Martin R.					

A

Hyman concerning the proposed rate stabilization mechanism. Finally, I respond to a few 1 2 policy points on rate design made by National Housing Trust witness Annika Brink. 3 **RESIDENTIAL CUSTOMER/SERVICE DEFINITION AND APPLICABILITY** Why does MGE propose changing the current definition and applicability of 4 0. 5 residential service to LAC's definition of a residential customer and availability?¹ 6 A. MGE's current tariff language prohibits residential service at locations other 7 than a customer's domicile. Thus, as discussed on page 9 lines 4-10 of the Direct Testimony 8 of Michael R. Noack, landlords and owners of rental property have expressed frustration for a 9 given unit changing to small general service upon vacancy of a rental customer. 10 Q. Does Staff support this change? 11 Staff supports the overall concept, but has concerns with the specific language A. 12 proposed by MGE. Since the proposed language mirrors LAC's current definition, Staff's 13 concerns are also applicable to LAC's tariff language. 14 What is the definition of residential service and applicability in MGE's Q. currently effective tariff? 15 MGE's current definition of residential service is found on Tariff Sheet 16 A. 17 No. R-9 paragraph 1.33: "RESIDENTIAL SERVICE OR USE: The provision of or use of gas 18 for household and domestic purposes." The applicability of residential service is found on 19 Tariff Sheet No. 25:

¹ As discussed in the Direct Testimony of Michael R. Noack starting on page 8 line 7 as the "Commercial-Domestic Use" adjustment through page 10 line 3.

.

1								
	APPLICABLE							
	To natural gas service supplied at one point of delivery to residential customers for domestic use by the customer or by members of customer's household for nonbusiness, noncommercial or nonindustrial purposes. Such domestic use shall include space heating, water heating, cooking, air conditioning, and other household uses.							
2	Service hereunder is not available to locations served through a master meter or to a location other than the customer's domicile.							
3	Q. What is the definition of a residential customer and applicability of the							
4	residential service rate in LAC's currently effective tariff?							
5	A. LAC's current definition of a residential customer is found on Tariff Sheet No.							
6	R-3-b:							
7 8 9 10 11 12 13 14 15 16 17	Residential Customer. A customer who purchases gas service for domestic use, including gas service provided to a single family dwelling or to a single meter serving a multiple family dwelling consisting of four (4) or fewer single family dwelling units, regardless of whether the customer is the ultimate consumer of the gas service. In addition, a customer who purchases gas service for such a dwelling while the dwelling is vacant shall be classified as a Residential Customer. This definition is intended to satisfy the provisions of Section 144.030 (23) RSMo, by establishing and maintaining a system and rate classification of "residential" to cause sales to residential customers under any of the Company's rate schedules to be considered as sales made for domestic use and thus exempt from sales tax. The availability of residential service is found on Tariff Sheet No. 2: "This rate							
18	schedule is available for all gas service rendered by the Company to residential customers,							
19	including space heating service."							
20	Q. What are Staff's concerns with the current language in LAC's tariff?							
21	A. First, the statutory citation, Section 144.030 (23) RSMo, is incorrect. The							
22_	legislature has amended the law, so the citation should read "Section 144.030.2.(24)". ²							

² (24) Except as otherwise provided in section 144.032, all sales of metered water service, electricity, electrical current, natural, artificial or propane gas, wood, coal or home heating oil for domestic use and in any city not within a county, all sales of metered or unmetered water service for domestic use:

1	Second, while LAC's definition limits the definition of a residential customer to a
2	single family dwelling or to a single meter serving a multiple family dwelling consisting of
3	four (4) or fewer single family dwelling units, Section 144.030.2.(24) does not appear to
4	have any such limitations. ³
5	Finally, Staff is concerned about the appropriateness of using RSMo 144, a chapter

6 concerning Sales and Use Tax and applicable to the Missouri Department of Revenue, as a

7 basis for defining residential service ad hoc.

8

Q. Do the Commission's rules provide a definition of a residential customer

9 or service?

(a) "Domestic use" means that portion of metered water service, electricity, electrical current, natural, artificial or propane gas, wood, coal or home heating oil, and in any city not within a county, metered or unmetered water service, which an individual occupant of a residential premises uses for nonbusiness, noncommercial or nonindustrial purposes. Utility service through a single or master meter for residential apartments or condominiums, including service for common areas and facilities and vacant units, shall be deemed to be for domestic use. Each seller shall establish and maintain a system whereby individual purchases are determined as exempt or nonexempt;

(b) Regulated utility sellers shall determine whether individual purchases are exempt or nonexempt based upon the seller's utility service rate classifications as contained in tariffs on file with and approved by the Missouri public service commission. Sales and purchases made pursuant to the rate classification "residential" and sales to and purchases made by or on behalf of the occupants of residential apartments or condominiums through a single or master meter, including service for common areas and facilities and vacant units, shall be considered as sales made for domestic use and such sales shall be exempt from sales tax. Sellers shall charge sales tax upon the entire amount of purchases classified as nondomestic use. The seller's utility service rate classification and the provision of service thereunder shall be conclusive as to whether or not the utility must charge sales tax;

(c) Each person making domestic use purchases of services or property and who uses any portion of the services or property so purchased for a nondomestic use shall, by the fifteenth day of the fourth month following the year of purchase, and without assessment, notice or demand, file a return and pay sales tax on that portion of nondomestic purchases. Each person making nondomestic purchases of services or property and who uses any portion of the services or property so purchased for domestic use, and each person making domestic purchases on behalf of occupants of residential apartments or condominiums through a single or master meter, including service for common areas and facilities and vacant units, under a nonresidential utility service rate classification may, between the first day of the first month and the fifteenth day of the fourth month following the year of purchase, apply for credit or refund to the director of revenue and the director shall give credit or make refund for taxes paid on the domestic use portion of the purchase. The person making such purchases on behalf of occupants of residential apartments or condominiums shall have standing to apply to the director of revenue for such credit or refund;

³ Staff Data Request No. 0203.1 requested information from LAC and MGE concerning customer impacts should this provision change. In response, LAC and MGE stated: "There is not a way to obtain the requested information from Laclede's billing system."

1	A. Yes, there are two applicable definitions in Chapter 13:						
2	4 CSR 240-13.015 (1)(G): "Customer means a person or legal entity						
3	responsible for payment for service, except one denoted as a guarantor."						
4	4 CSR 240-13.015 (1)(AA): "Residential service or service means the						
5	provision of or use of a utility service for domestic purposes."						
6	Q. Does Staff have recommended tariff language?						
7	A. While Staff supports a consolidated residential definition and elimination of						
8	MGE's clause limiting residential service only to locations of a customer's domicile, Staff						
9	would be open to many different solutions. For instance, Staff could support tariff language						
10	that reflects MGE's current tariff language excluding the prohibition of residential service to						
11	locations other than the customer's domicile, tariff language more reflective of the definitions						
12	in Chapter 13, or tariff language borrowed from another natural gas utility as provided in						
13	Schedule MLS-r1. ⁴						
14	REVENUE STABILIZATION MECHANISM						
15	Q. What is MGE/LAC's proposed Revenue Stabilization Mechanism?						
16	A. The Revenue Stabilization Mechanism, as discussed by MGE and LAC						
17	witnesses Glenn W. Buck, C. Eric Lobser, and Scott A. Weitzel, is a proposal to have a						
18	separate charge on customer bills that would vary in response to changes in average						
19	customer usage.						
20	Q. Do other witnesses discuss MGE/LAC's proposed Revenue Stabilization						
21	Mechanism?						

⁴ The Empire District Gas Company's definition mirrors Laclede's current definition; therefore, Staff would have similar issues with using Empire's definition.

1	A. Yes, both National Housing Trust witness Annika Brink and Division of					
2	Energy's witness Martin R. Hyman offer qualified support for MGE/LAC's proposed					
3	Revenue Stabilization Mechanism.					
4	Q. What legal citation is identified as authorizing this mechanism?					
5	A. LAC/MGE witness Buck cites RSMo §386.266.3. It reads:					
6 7 8 9 10	Subject to the requirements of this section, any gas corporation may make an application to the commission to approve rate schedules authorizing periodic rate adjustments outside of general rate proceedings to reflect the non-gas revenue effects of increases or decreases in residential and commercial customer usage due to variations in either weather, conservation, or both.					
11	Q. Does LAC/MGE's proposal conform to this statute?					
12	A. No. LAC/MGE's revenue stabilization mechanism would adjust for all					
13	changes in average customer use, not solely due to variations in weather and/or conservation.					
14	For example, this mechanism would also make adjustments due to fuel switching, rate					
15	switching, new customers with non-average usage, and due to economic factors. LAC/MGE					
16	witness Scott A. Weitzel affirmatively responds in his direct testimony that the proposed					
17	Revenue Stabilization Mechanism provides a "per customer base revenue amount." ⁵ Thus,					
18	Division of Energy's witness Martin R. Hyman is incorrect when he states that the proposed					
19	mechanism would only make adjustments for "the portions of sales and revenues related to					
20	weather and changes in customer use due to efficiency or conservation." ⁶					
21	Q. Division of Energy's ("DE") witness Martin R. Hyman stated "DE would not					
22	oppose the implementation of the RSM "if the Companies meet any rate design-related					

⁵ Direct Testimony of Scott A. Weitzel, p. 22, ll. 11-15 ⁶ Direct Testimony of Martin R. Hyman, p. 3, ll. 12-16.

recommendations addressed in DE's subsequent testimony."⁷ Has DE sponsored any rate 1 2 design-related recommendations in direct testimony? 3 A. No. 4 Q. Is "conservation" defined within RSMo §386? 5 A. No. In fact, "conservation" is used only one other time in that chapter; Section §386.266.13 which reads: "The public service commission shall appoint a task force, 6 consisting of all interested parties, to study and make recommendations on the cost recovery 7 and implementation of conservation and weatherization programs for electrical and gas 8 9 corporations." 10 Typically energy conservation is distinguished from energy efficiency. The U.S. 11 **Energy Information Administration states:** The terms energy efficiency and energy conservation have distinct meanings: 12 13 Energy efficiency is using technology that requires less energy to perform 6 the same function. Using a compact fluorescent light bulb that requires less 14 15 energy instead of using an incandescent bulb to produce the same amount 16 of light is an example of energy efficiency. Energy conservation is any behavior that results in the use of less energy. 17 18 Turning the lights off when leaving the room and recycling aluminum cans are both ways of conserving energy.⁸ 19 Could this mechanism allow LAC and MGE to receive more than their 20Q. authorized rate of return? 21 22 Yes. LAC's and MGE's proposal deems a consumer's average usage is based Α. 23 on the outcome of a rate case and would only change as a result of weather and conservation.

⁷ Direct Testimony of Martin R. Hyman, p. 15, ll. 14-18. Also see p. 7, ll. 16-19.

⁸ U.S. Energy Information Administration (2016). "Energy Efficiency and Conservation." https://www.eia.gov/energyexplained/index.cfm?page=about energy efficiency. (22SEP17).

Thus, if LAC and MGE were to add low-usage customers, this mechanism would treat their 1 2 usage as too low and allow LAC and MGE to recover the difference between that new 3 customers' lower than average usage and an average customer's usage. Schedule MLS-r2 makes changes to LAC's and MGE's witness Glenn W. Buck's Schedule GWB-D2 to 4 5 demonstrate this issue.⁹

6 Additionally, as Staff noted in its Class Cost of Service and Rate Design Reports, 7 several large customers that are more typical of Large General Service ("LGS") customers are currently in the Small General Service ("SGS") class. Should those customers move to an 8 9 LGS class after this rate case, the overall average usage of the SGS class would decrease, thus 10 providing LAC and MGE with additional compensation with *no* change in actual *total* usage.

One of the benefits of the Revenue Stabilization Mechanism cited by LAC and 11 Q. 12 MGE witness Mr. Lobser is that it will "provide residential and commercial customers with more stability in their bills."¹⁰ Do these customers currently have a mechanism that would 13 stabilize their bills? 14

Yes. Both LAC and MGE have budget billing options that would smooth 15 Α. these bills, and the associated companies' revenues, over the course of a year. 16

0. Could the Revenue Stabilization Mechanism create less stability in customer 17 18 billings?

Yes. LAC and MGE witnesses Glenn W. Buck and Scott A. Weitzel discuss 19 Α. an annual true-up of the Revenue Stabilization Mechanism.¹¹ If a relatively warm winter 20

⁹ Schedule GWB-2 has a couple labeling errors; "Usage Variance for RSM (H - C)" should be "(C - H)" and "RSM Deferral (IXAXC)" should be "(IXAXD)". ¹⁰ Direct Testimony of C. Eric Lobser, p. 33, ll. 16-17.

¹¹ "In order to create a mechanism that helps stabilize customers' bills, we are proposing that, similar to with the PGA clause, the RSM will have one required filing a year as well as up to 3 additional discretionary filings no closer than 60 days apart per filing" (Direct Testimony of Glenn W. Buck, p. 13, II. 2-3). See also Direct Testimony of Scott A. Weitzel, p. 22, ll. 16-21.

were to be subsequently followed by a relatively cold winter, the Revenue Stabilization 1 2 Mechanism would initially start at a higher rate due to the warm period¹² and compound the 3 problem of high customer bills if the subsequent period is abnormally cold.

4

5

6

7

Q. Another benefit cited by LAC and MGE witness Mr. Lobser, National Housing Trust witness Annika Brink, and Division of Energy's witness Martin R. Hyman is that it could mitigate the disincentive of the utility from pursuing energy efficiency programs. Is there a negative aspect of this mechanism's impact on energy efficiency?

8 Α. Yes. First, this mechanism would reduce the incentive for customers to pursue 9 energy efficiency since it would work to increase customer bills for any reduction in usage. 10 Secondly, both National Housing Trust witness Annika Brink and Division of Energy's 11 witness Martin R. Hyman discuss requiring LAC and MGE to increase spending in energy 12 efficiency programs, but do not discuss the cost effectiveness of these programs. It is unclear 13 how further increases to LAC's and MGE's rate base will work to the benefit of all customers. 14 In fact, Division of Energy's witness Martin R. Hyman's testimony seems to indicate that these programs only benefit program participants and not all customers.¹³ 15

- 16 Q. Are there other policy considerations that were not discussed by LAC and 17 MGE witness C. Eric Lobser?
- 18

A. Yes. One aspect of this policy is that it removes some of the ability of 19 customers to control their own bills; a customer's final bill will include a rate that is a 20 function of other customers' usage. An aspect of this effect is that lower income customers, 21 who may have fewer resources to invest in energy efficient devices and may live in

¹² LAC/MGE witness C. Eric Lobser discusses initiating the mechanism at the beginning of a heating season (p. 36, ll. 8-9).

Direct Testimony of Martin R. Hyman, p. 8, Il. 1-21.

rental properties,¹⁴ would gradually bear a greater proportion of this charge as higher income
 customers become more energy efficient.

Q. Are there other issues in this rate case that would complicate the structure of a
revenue stability mechanism?

Yes. Blocked volumetric rates would add some complexity, although not 5 A. insurmountable, over which tariffed rates would be applied to a usage variance in determining 6 the proper RSM deferral. Also, Staff has recommended combining LAC's three C&I rate 7 classes¹⁵ and MGE's SGS and LGS rate classes into one General Service rate class for each 8 jurisdiction. LAC and MGE propose to apply this mechanism to the Residential and SGS 9 classes. If the Commission orders one General Service rate class for LAC and MGE, the 10 revenue stability mechanism would likely need to be limited to only the residential 11 12 customer classes.

13

Q. What is Staff's recommendation regarding the revenue stability mechanism?

A. Staff recommends rejection of the revenue stability mechanism as the proposed
mechanism goes beyond the statute and provides LAC and MGE a path to receive revenues
beyond an authorized rate of return.

17 Should the Commission decide to authorize a Revenue Stability Mechanism, Staff 18 recommends that the Commission limit the mechanism to the residential classes only and 19 limit the adjustment to variations due to weather. Staff's recommendation to limit the 20 mechanism to variances in weather is two-fold: first, based on the weather normalization 21 regressions performed by Staff for the Cost of Service Report filed in this case, a mechanism 22 based solely on weather could account for over 97% of usage variation within a given year;

¹⁴ As discussed by National Housing Trust witness Annika Brink on page 6, lines 3 through 8.

¹⁵ The Commercial and Industrial classes: C1, C2, and C3.

secondly, evaluating which usage changes are due solely to conservation or other factors can be an expensive and litigious process. Schedules MLS-r3 and MLS-r4 demonstrate how a weather normalization adjustment for a natural gas utility works in Kentucky and Virginia. These tariff sheets can provide guidance on how a revenue stabilization mechanism could be structured if the Commission does not agree with Staff's primary recommendation of not authorizing a revenue stabilization mechanism.

7 RATE DESIGN POLICY

Q. Do you agree with National Housing Trust's witness Annika Brink that "low
income multifamily households have high energy burdens (see my revenue requirement
testimony in this case) and Midwestern multifamily homes use 43% more energy per square
foot than single family detached homes" (p. 4, II. 7-10)?

A. Yes, but it is unclear what useful information can be obtained from these statements. For instance, one would expect a household with a lower income to have a higher energy burden than a household with higher income because energy consumption would likely not change perfectly proportional to changes in income. Likewise a television would consume the same amount of electricity regardless of the size of room it is in, and since multifamily homes tend to have less square footage than single family detached homes, one would expect smaller residences to have higher energy consumption per square foot.

Furthermore, Ms. Brink is conflating this issue by shifting from "low energy users" to "low income multifamily households" and "single family detached homes" which includes low, mid, and upper income levels, and by shifting from discussing low natural gas consumption to generic energy consumption that will include other forms of fuel.

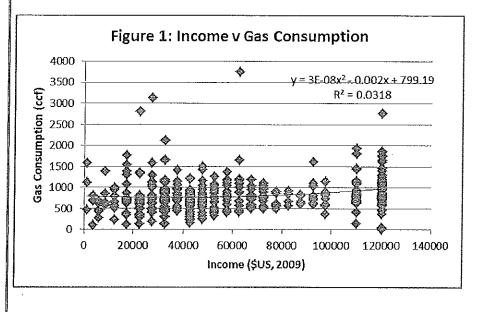

Q. Do you agree that "Midwestern multifamily households tend to use less total
energy than other households: less than half of what is consumed by a Midwestern single

family detached home according to 2009 Residential Energy Consumption Survey [RECS]
 data^{**16}?

A. Yes, but again, Ms. Brink is conflating this issue by shifting from "low-income multifamily households" to "Midwestern multifamily households" and by shifting from discussing low natural gas consumption to generic energy consumption that will include other forms of fuel.

Additionally, it is unclear why Ms. Brink would use Midwestern proxy information
concerning low income usage when the 2009 RECS data is available and can specifically
identify the income and consumption of Missouri residents that consume natural gas. Figure
1 is a graph of income¹⁷ compared to usage for Missouri residents identified in the 2009
RECS as using natural gas that also provided bill information.

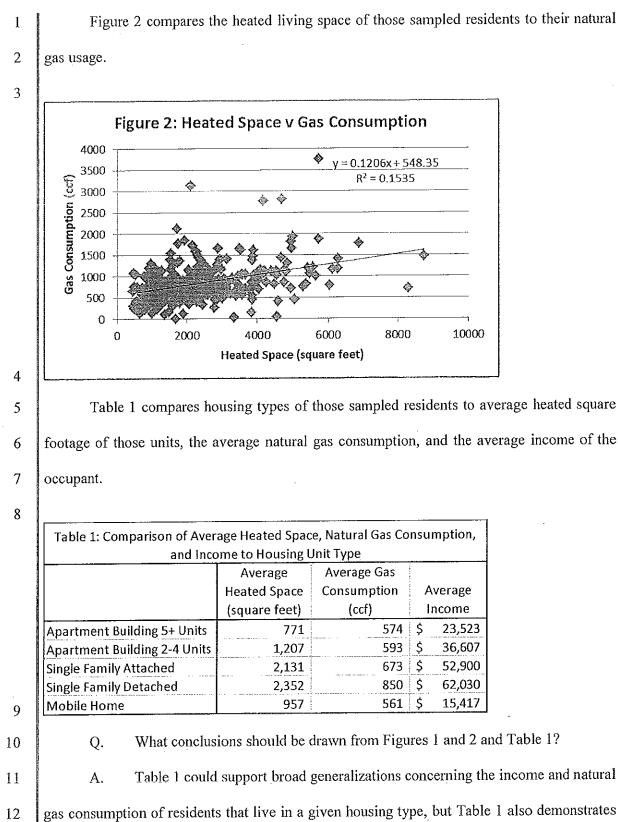

13

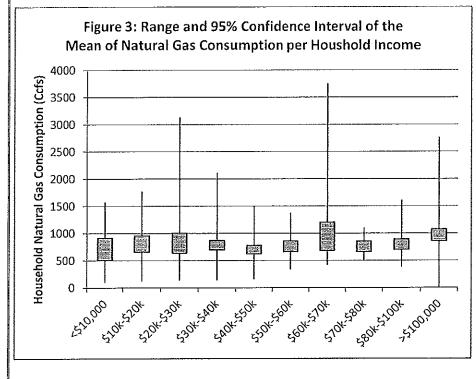

¹⁷ The survey responses for income are grouped into ranges (e.g. \$45,000 to \$49,999).

¹⁶ Direct Testimony of Annika Brink, p. 4, ll. 10-12.

that a large amount of information is lost when using averages. As shown in Figures 1 and 2, there is a large range around the averages, thus there is less confidence, statistically speaking, in the average itself. Figure 3 below is similar to Figure 1, but provides the confidence interval around the mean and range rather than specific data points. As can be seen, the confidence interval around the average can be in the hundreds of cubic feet.

6

- Q. Does this conclude your rebuttal testimony?
- 9

7

8

A. Yes it does.

Schedule MLS-r1: Missouri Natural Gas Utilities' Definitions of Residential Service/Customer and Their Applicability/Availability

Empire (R-4):

AA. Residential service means the provision of or use of a utility service for domestic purposes.

(Sheet 9):

AVAILABILITY

This service is available to all residential customers. A "residential" ("domestic") customer under this rate classification is a customer who purchases natural gas for "domestic use." "Domestic use" under this rate classification includes that portion of natural gas, which is ultimately consumed at a single-family or individually metered multiple-family dwelling, and shall apply to all such purchases regardless of whether the customer is the ultimate consumer. This schedule is intended to satisfy the provisions of Section 144.030(23) RSMo by establishing and maintaining a system and rate classification of "residential" to cause the residential sales and purchases of natural gas under this rate schedule to be considered as sales for domestic use.

Laclede (R-3-b):

Residential Customer. A customer who purchases gas service for domestic use, including gas service provided to a single family dwelling or to a single meter serving a multiple family dwelling consisting of four (4) or fewer single family dwelling units, regardless of whether the customer is the ultimate consumer of the gas service. In addition, a customer who purchases gas service for such a dwelling while the dwelling is vacant shall be classified as a Residential Customer. This definition is intended to satisfy the provisions of Section 144.030 (23) RSMo, by establishing and maintaining a system and rate classification of "residential" to cause sales to residential customers under any of the Company's rate schedules to be considered as sales made for domestic use and thus exempt from sales tax.

(Sheet Number 2):

<u>Availability</u> – This rate schedule is available for all gas service rendered by the Company to residential customers, including space heating service.

Liberty (22):

AVAILABILITY:

This schedule is available to Customers consuming gas for space heating, water heating, cooking, air conditioning and other proper purposes in private residences, individual apartments and in a multifamily dwelling, and using a type A or B meter. Service may not be shared or resold.

(Sheet 76): Residential: Service provided for domestic purposes.

MGE (Laclede, R-9):

1.33 RESIDENTIAL SERVICE OR USE: The provision of or use of gas for household and domestic purposes.

(Sheet 25):

APPLICABLE

To natural gas service supplied at one point of delivery to residential customers for domestic use by the customer or by members of customer's household for nonbusiness, noncommercial or nonindustrial purposes. Such domestic use shall include space heating, water heating, cooking, air conditioning, and other household uses.

Service hereunder is not available to locations served through a master meter or to a location other than the customer's domicile.

Summit Natural Gas of Missouri, Inc. For: Gallatin Division (Sheet 8):

GENERAL SERVICE (GS)

Availability - This rate schedule is available for all firm gas service rendered by the Company, including space heating service. All customers formerly receiving service under the City of Hamilton Residential and Small Commercial rate schedule and under the City of Gallatin Rate Schedules S-Taxable, A, X and Y (Residential) shall be rendered service under this Schedule.*

Summit Natural Gas of Missouri, Inc. For: Warsaw Division, Lake of the Ozarks Division (Sheet 9, 10):

GENERAL SERVICE (GS)

Availability - This rate schedule is available for all firm gas service rendered by the Company, including space heating service, for customers with annual usage of less than 3,000 Ccf.+

Summit Natural Gas of Missouri, Inc. For: Rogersville Division, Branson Division (Sheet 11, 12)

GENERAL SERVICE (GS)

Availability – This rate schedule is available for all firm gas service rendered by the Company, including space heating service.

(Sheet 82):

(7) Residential Customer - One who uses or will use natural gas for the primary purposes of space heating or cooling, water heating, and/or other appliances.+

Union Electric (5):

RESIDENTIAL SERVICE RATE

Applicable to gas service to all residential customers as defined in Section I.H. of Company's Rules and Regulations. As indicated in Section IX., Resale of Service of Company's Rules and Regulations, this service may not be resold.

(Sheet No. 40):

*1. Residential Customer

The user, for domestic purposes, of gas service supplied by the Company to individually metered residences and apartments consisting of one or more rooms for the use of one or more persons as a housekeeping unit with space for eating, living and sleeping, and permanent provisions for cooking and sanitation.

2. General Service Customer

The user of gas service in a single metered residential multiple occupancy dwelling, a combined residential and non-residential activity or for any other non-residential purpose.

WEATHER NORMALIZATION ADJUSTMENT

1. APPLICABILITY

The Weather Normalization Adjustment will become effective on August 1, 2009 for the twelve month period of May 1, 2008 through April 30, 2009 and will be applicable for each twelve month period, thereafter. The Weather Normalization Adjustment is applicable to service delivered under the terms of rate schedules 610 and 620 throughout the entire service area of the Company based on the most recent 30-year average of heating degree days. A separate Weather Normalization Adjustment will be calculated for customers in each rate schedule in each weather zone. The East weather zone shall include all customers in and adjacent to Blacksburg, Radford, Pulaski and Wytheville. The West weather zone shall include all customers in and adjacent to Bristol, Marion and Abingdon.

2. CALCULATION OF ADJUSTMENT

The Weather Normalization Adjustment Factor will be calculated for each customer class and weather zone as follows:

- (1) Ccf Volume Adj. = (HDD Normal HDD Actual) * M * (Annual no. of bills/12)
- (2) Total Revenue Adjustment = Volume Adj. * Non-Gas Commodity Margin
- (3) Adjustment Factor Per Ccf = Total Rev Adj./Annual Weather Sensitive Usage
- (4) Any residual balance (positive or negative) as a result of actual Weather Normalization Adjustment revenue collected compared to the total revenue adjustment set forth in (2) above shall be added to the following year's revenue adjustment amount.

Note: M will be the slope of the most recent 36 months regression equation for the adjustment period for each rate schedule and weather zone. Annual Weather Sensitive Usage is defined as the 12 months total actual usage less the Base Load usage for the same period. *The Base Load usage is defined as the intercept value resulting from the most recent 36 months regression equation multiplied times the 12 months total of bill counts.*

3. BILLING

All adjustments, if applicable, will be included on the monthly bill as an adjustment factor applicable to all Ccfs in excess of the Base Load intercept value as set forth in (2) above and will be effective for the 12 month period of August through July that occurs after the preceding Weather Normalization Adjustment period of May through April as set forth in (1) above.

4. LATE PAYMENT CHARGE

Any late payment penalties applicable to a customer's bill will also apply to Weather Normalization Adjustment amounts.

5. TAXES

Weather Normalization Adjustments will be subject to any effective tax based upon revenue receipts levied by governing bodies.
