A. My name is Michael J. Ensrud, P.O. Box 360, Jefferson City, Missouri 65102.

A. I am a Rate & Tariff Examiner II in the Energy Department of the Missouri Service Commission (Commission).

A. I have a Bachelor of Science from Drake University in Accounting. I have completed the NARUC Annual Regulatory Studies Program at Michigan State University. In the regulatory field, I've worked for CompTel Missouri, and CommuniGroup, Inc., Sprint, Telecom\* USA, and General Telephone Company of the Midwest in the private sector. In addition, I have four-years experience with the Iowa Public Utility Board – Iowa's public utility regulatory agency. I am currently a consultant to the Missouri Commission on Public Utilities.

Q. Have you previously testified before the Missouri Public Service Commission?

A. Yes, I have testified before this Commission. I have also filed written testimony and have testified in several other jurisdictions.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to address the various tariff changes Missouri Gas Energy (MGE or Company) is proposing within the context of this case.

**Executive Summary**

I will address the following issues:

MGE's proposal to reduce the Unmetered Gaslight Service's Delayed Payment Charge to 0.5%;

MGE's proposal to establish a 36-month retention period for customer deposit repayments;

MGE's proposal to change the method of calculating customer deposits. MGE wants the lesser of two highest months or four average months in lieu of two highest months being the criteria;

MGE's proposal to collect transport costs from transport customers via the cash out provision;

MGE's proposal relating to a seven-month "minimum bill" recovery period for seasonal disconnects; and

MGE's proposal of a Standby Facilities Charge for transport customers.

**Unmetered Gaslight Service's Delayed Payment Charge to 0.5%.**

Q. Does Staff agree with MGE's proposed reduction in the Unmetered Gaslight Service's Delayed Payment Charge from 1.5% to 0.5%?

A. Staff agrees with this proposed change. This action constitutes correction of an oversight from a previous case. It brings the Delayed Payment Charge into line with what the other rate classes pay.

**Customer Deposit Retention Period**

Q What is Staff's position regarding MGE's proposal to expand the retention period of customer deposits from 12 months to 36 months?

Direct Testimony of  
Michael J. Ensrud

1           A.     Staff is opposed to this proposal. MGE's proposal violates the existing Rule.  
2 Rule 4 CSR 240-13.030 clearly states:

3                   (4)     A deposit shall be subject to the following term:  
4                   (D)...Upon satisfactory payment of all undisputed utility charges  
5                   **during the last twelve (12) billing months**, it shall be promptly refunded or  
6                   credited, with accrued interest, against charges stated on subsequent bills...  
7                   **(Emphasis added).**

8  
9           Staff further notes that MGE's stated justification for this proposed change, from  
10 MGE's response to Staff Data Request (DR) No. 132, is no more than discussions from a  
11 Commission Roundtable. Staff believes that the mere fact that Roundtable discussions have  
12 taken place on this topic is not a sufficient or appropriate reason to approve tariff language  
13 that is in direct violation of existing rules. Accordingly, the Commission should reject  
14 MGE's proposal.

15                                   **Method of Calculating Customer Deposits**

16           Q.     What is Staff's position regarding MGE's proposal to change the method of  
17 calculating deposits from the current tariff deposit language that states that customer deposits  
18 shall not exceed two (2) times the highest bill to either the deposit shall not exceed two (2)  
19 times the highest bill option, or four (4) times the average bill option, whichever is less?

20           A.     The Staff opposes MGE's proposal. Staff proposes that MGE's existing tariff  
21 and the current rules should be maintained. 4 CSR 240-13.030 - Deposits and Guarantees of  
22 Payment rule states:

23                   (4) A deposit shall be subject to the following terms:  
24                   (A) It shall not exceed two (2) times the highest bill for utility charges actually  
25                   incurred or estimated to be incurred by the customer during the most proximate  
26                   twelve (12)-month period at the service location....

27  
28           This proposed tariff revision is also predicated upon ongoing discussions from the  
29 Commission Roundtable (See MGE's response to Staff DR 129). Again, Staff believes that

Direct Testimony of  
Michael J. Ensrud

1 the fact that Roundtable discussions have taken place concerning this topic is not a sufficient  
2 or appropriate reason to approve tariff language that is in direct violation of existing rules.  
3 Accordingly, the Commission should reject MGE's proposal.

4 **Transportation Cash Out Provision**

5 Q. What is a transportation "cash out" provision and what is Staff's  
6 recommendation as to whether it should be modified to allow MGE to recover transportation  
7 costs?

8 A. A cash-out provision is a procedure in which transportation customers are  
9 allowed to resolve imbalances by cash payments, rather than making up imbalances with gas  
10 volumes in kind. An imbalance is a discrepancy between the amounts of gas a transportation  
11 customer delivers versus what it uses. A negative imbalance is created when a transport  
12 customer uses more gas than it delivers into MGE's system. On the other hand, a positive  
13 imbalance is created when the transport customer uses less gas than it delivers into MGE's  
14 system.

15 Staff accepts MGE's justification for expanding its existing cash-out provision to  
16 include the recovery of transportation costs from transportation customers. Since the cost of  
17 transporting gas to the city gate is a cost that MGE redistributes to firm customers via the  
18 PGA (See response to Staff DR No. 133), then the cost of transporting a transportation  
19 customer's gas, likewise, needs to be recovered. Unless the costs are recovered from the  
20 transportation customer who uses the delivered gas, such costs end up being redistributed to  
21 firm customers – who derived no benefit from the gas being consumed by the transportation  
22 customer.

1 Q. How will the revenues generated by these new cash-out provisions (including  
2 transport costs) be recognized?

3 A They will flow through to all firm customer classes via the Purchased Gas  
4 Adjustment (PGA) mechanism. This means that if MGE fails to recover underlying costs  
5 from transportation customers, then firm customers will pay the difference.

6 **Seven-Month "Minimum Bill" Recovery Period for Seasonal Disconnects.**

7 Q. What is a seven-month minimum bill recovery period for seasonal  
8 disconnects?

9 A MGE proposes a reconnection charge that collects an amount that is equal to a  
10 minimum charge per each month missed, had the customer remained on the system, for a  
11 period of up to seven months.

12 MGE proposes the following tariff language:

13 In the event a customer orders a disconnection and a reconnection at the same  
14 premises within a period of seven (7) months, Company will collect, as a  
15 reconnection charge, the sum of such minimum bills as would have occurred  
16 during the period of disconnection, but in no event less than the reconnection  
17 charge provided for in Section 14, herein.

18  
19 Q. What is Staff's position relating to this proposal?

20 A. Staff believes that the proposal should be modified.

21 Q. How does Staff interpret MGE's proposal?

22 A. MGE's proposal addresses seasonal disconnections. In MGE's response to  
23 Staff's DR No. 127, MGE states that the filing is "intended to serve as a disincentive to  
24 seasonal disconnects." Seasonal disconnects are generally customers who disconnect from  
25 service for a month or more, traditionally in the summer, and these customers then generally  
26 reconnect during the heating period.

Direct Testimony of  
Michael J. Ensrud

1           These seasonal disconnect customers shift costs to customers who remain connected to  
2 the system year around. Seasonal disconnects avoid paying the Customer Charge, as well as  
3 the current Commodity Charge. Staff believes that a customer engaging in a seasonal  
4 disconnection utilizes it as a way to save money for that specific customer. However, since  
5 most distribution costs are fixed, customers taking a summer hiatus from paying bills benefit  
6 themselves, but harm others. MGE incurs almost no cost savings by a customer engaging in a  
7 summer disconnection. The revenue streams to recover these costs are impeded by customers  
8 engaging in summer disconnections.

9           Q     What is Staff proposing as an alternative to MGE's proposal?

10          A.     Staff proposes four changes to MGE's proposal to improve the chances that a  
11 proper reconnection charge will either recapture revenues foregone during seasonal  
12 disconnect, or to discourage customers from engaging in seasonal disconnects. Staff proposes  
13 to:

14                1) Institute a two-component reconnection charge. First, MGE should  
15 charge the traditional reconnection charge plus the monthly Customer Charge  
16 (in today's environment) or the Delivery Charge (in the proposed  
17 environment) that are foregone during the disconnection period;

18                2) In MGE's response to Staff's DR No. 127, MGE asserts it will  
19 exempt customers from the proposed seven-month back-billing provision if  
20 they are disconnected for reasons other than requesting a seasonal disconnect.  
21 MGE proposes exemptions for "other" types of disconnection, such as a  
22 disconnection for non-payment, from the cumulative recovery aspect.  
23 Whatever the reason for the disconnection, the two-component reconnection  
24 fee should apply with no exceptions, except as noted in this testimony;

25                3) Staff proposes that the threshold to avoid the two-component charge  
26 should be for a period of at least 12-months; and

27                4) Staff proposes to use the Delivery Charge in lieu of MGE's  
28 proposed term of a "minimum bill" in its proposed language.  
29  
30  
31  
32

Direct Testimony of  
Michael J. Ensrud

1 Q. What is meant by a "delivery charge"?

2 A. The Company's current tariff uses the terms "Customer Charge" to denote a  
3 fixed monthly charge whereby it collects a portion of its margin costs, and the term  
4 "Commodity Charge" to describe a volumetric charge by which it collects the remainder of its  
5 margin. In its proposed tariff sheets, MGE changes these terms to "Basic Service Charge"  
6 and "Delivery Charge," respectively, without stating a reason for the change. Throughout this  
7 testimony, to avoid confusion, Staff will use "Customer Charge" and "Commodity Charge" to  
8 refer to the current two part margin recovery rates, and "Delivery Charge" to refer to Staff's  
9 proposed single, fixed charge for recovery of margin costs. Staff witness Anne Ross of the  
10 Commission's Energy Economic Analysis Department is proposing a new rate called a  
11 "Delivery Charge." This Delivery Charge will be the basis for the second-component  
12 reconnection charge. The Staff's Delivery Charge will recapture the costs that are currently  
13 recovered in MGE's Customer Charge and Commodity Charge. Staff is proposing to charge a  
14 two-step reconnection fee that would allow the Company to collect the Delivery Charges  
15 missed during the disconnection period, as well as the traditional reconnection charge. This  
16 will ensure that the MGE's fixed costs are equitably paid for by all customers.

17 Q. What are the specifics of Staff's proposal?

18 A. First, MGE would charge the traditional cost-based reconnection charge. The  
19 established reconnection charge is \$45.00. Additionally, Staff's proposal would allow MGE  
20 to accumulate the number of Delivery Charges that a customer avoided when service was  
21 disconnected. (If the customer did not miss paying a Delivery Charge, only the \$45.00  
22 reconnection charge would apply for reconnection.) As a prerequisite to re-establishing  
23 service, the customer would assume responsibility for both components of the two-component

Direct Testimony of  
Michael J. Ensrud

1 reconnection charge. This two-component rate structure is Staff's proposal to alleviate  
2 seasonal disconnections and the inequitable cost shifts associated with activity.

3 Q. What happens when a customer disconnects, but moves to a different locale  
4 and gets back on the system?

5 A. A customer who disconnects and moves to a different location should not be  
6 subject to reconnection charge, but should only pay a connection charge. A customer who  
7 disconnects and never returns to the same premise has truly severed the relationship with  
8 MGE and will avoid the reconnection charge.

9 Those who merely interrupt service for an interim period are in a different situation  
10 and should pay the residual charge. These customers never fully terminated service. Instead,  
11 they placed it in a state of suspension, and will reactivate themselves in cooler months.

12 Q. Should there be any limitation to this proposed policy?

13 A. Yes. This policy is geared to discourage the seasonal disconnect customer  
14 from engaging in such activity. If a customer were to have service disconnected for 12-  
15 consecutive months (or longer), Staff believes that should not constitute a seasonal  
16 disconnect. That should be the duration where a customer should revert to only paying the  
17 \$45.00 reconnection charge.

18 Q. Is there an administrative aspect to the Staff's proposal to be addressed?

19 A. Yes. MGE should give customers time to repay the two-component  
20 reconnection charges. Since some seasonal customers are off for a prolonged period of time,  
21 in some cases, special payment provisions may be applicable. Staff advocates that for those  
22 who voluntarily disconnect, they should be given the ability to pay the reconnection charges  
23 over the same duration as they were disconnected, or up to a maximum period of three

1 months. For voluntary disconnects, where the duration of disconnection exceeded three  
2 months, MGE should allow the total cost of reconnection to be spread over only three months.

3 For those customers who were involuntarily disconnected, such customers should be  
4 subject to the same provisions of scheduling past-due bills as any other customer subject to  
5 involuntary disconnects.

6 **Standby Facilities Charge**

7 Q. What are "Standby Facilities"?

8 A. In its response to Staff DR No.130, MGE states that:

9 The purpose of the clause is to prevent a customer who bypasses MGE  
10 from being able to use MGE as a back up provider without compensation for  
11 the metering and regulating equipment in place. The objective is to recognize  
12 the actual cost of serving a particular customer who for what ever reason has  
13 required the Company to provide meters, services, or regulators which are not  
14 correctly sized for the actual level of service being provided. Its impact will be  
15 very limited. In normal circumstances, when a customer for whatever reason  
16 moves to a lower rate class from the transportation or LV sales class, MGE  
17 will remove the electronic facilities necessary to serve the customer as an LV  
18 customer and if necessary change out meters and regulators and replace them  
19 with the proper sized equipment. The Company has one steam customer who  
20 requires MGE to provide the meter and service necessary to serve them as a  
21 Large Volume customer in case the steam service is unavailable. At most  
22 there are possibly two other customers which have the same situation. The  
23 additional revenue to be realized from make this tariff change is at most  
24 \$13,887 which also assumes that if this tariff change is made, the customer  
25 will still want MGE to leave the larger equipment in place. There is also the  
26 possibility that the customer will request MGE to remove the large equipment  
27 instead of paying the higher charge.

28  
29 The facilities include an Electronic Corrector and a Communications  
30 device plus conduit and wiring along with meter, service line and sometimes  
31 regulator which is much costlier than the same equipment needed to serve an  
32 SGS or LGS customer.

33  
34 Essentially, MGE generally removes specialized meters when a customer downgrades  
35 or converts to a transportation customer. Some former Large Volume Service (LVS)  
36 customers request that the meter be left in place and not be salvaged. This action is

Direct Testimony of  
Michael J. Ensrud

1 contradictory because the customer is no longer in the LVS customer class. Under the current  
2 practice today, a customer who no longer wants to be, or qualifies as an LVS customer, but  
3 requests retention of the LVS sized meter, only pays the Customer Charge for the newly  
4 installed smaller meter.

5 The switch in customer class is typically from LVS to a Small General Gas Service  
6 (SGS) or to a Large General Gas Service (LGS) customer. The converted customer pays a  
7 Customer Charge commensurate with the customer class of service currently prescribed, even  
8 though the converted customer wants to retain the LVS meter. In addition, under MGE's  
9 proposal, the customer pays a Standby facilities charge. These two components equal a LVS  
10 Customer Charge.

11 Q. What is Staff's proposal on this issue?

12 A. Staff agrees with the concept of what MGE is proposing, but disagrees with  
13 MGE's proposed mechanics. Putting a dollar-specific rate in the tariff for this meter retention  
14 can be cumbersome. Staff proposes the following alternative language:

15 Standby facilities charge - When a customer requests (in writing)  
16 retention of a meter larger than what is typical for the class of service that the  
17 customer has subscribed, the Company may charge the customer the Staff's  
18 proposed Delivery Charge commensurate with the size of meter being  
19 retained. In situations where a customer has two meters on the customer's  
20 premise, MGE may charge the customer for the higher of the two Staff  
21 proposed Delivery Charges commensurate with the size of the larger of the  
22 two meters being retained, but shall not bill the customer the Staff proposed  
23 Delivery Charges for both meters. If the customer does not agree (in writing)  
24 to pay the Staff proposed Delivery Charge commensurate with the larger sized  
25 meter being retained, MGE is free to remove the un-utilized meter.

26  
27 This language eliminates the need to revise the Standby facilities charge each and  
28 every time a change in rates for the proposed Delivery Charge occurs. Under MGE's  
29 methodology, the Standby facilities charge is calculated as a function of the differences in

Direct Testimony of  
Michael J. Ensrud

1 rates between various classes of customers. MGE's proposal is based upon differences  
2 between the various Customer Charges. Staff's proposal incorporates the use of Staff's  
3 proposed Delivery Charges. Under MGE's proposed methodology, each and every time the  
4 proposed Customer Charge changes, the Standby facilities charge would need to be revised in  
5 order to maintain the proper inter-relationships. Staff's proposed methodology eliminates this  
6 problem. This language is more reflective of the various caveats addressed in MGE's  
7 response to Staff DR No.130. It establishes a policy that directly "ties" the size of the idle  
8 meter to what the customer should pay. Further, customers must solicit retention of the larger  
9 meter in order for the Standby facilities charge to apply. No charge is applicable in instances  
10 where MGE simply delays retrieving the larger meter that a customer has no interest in.

11 Staff's proposal is that the customer having a meter commensurate with LVS will pay  
12 Staff's proposed Delivery Charge for that class. MGE will waive the Staff proposed Delivery  
13 Charge commensurate with the class of service the customer is currently subscribed to when  
14 the customer seeks retention of a larger meter. MGE will charge the customer the Delivery  
15 Charge based upon the larger sized meter. The customer will not be charged for both meters.

16 Paying the Staff's proposed Delivery Charge is fair to the customers requesting the  
17 privilege of retaining the meter and assorted accoutrements. If the customer requests  
18 retention of the LVS meter, the customer should pay the charge commensurate with that  
19 degree of service.

20 Q. Does this conclude your direct testimony?

21 A. Yes it does.
