Service Commission

GRAIN BELT EXPRESS CLEAN LINE

The Grain Belt Express Clean Line is an approximately 700-mile overhead, direct current transmission line that will deliver low-cost, renewable energy from western Kansas to Missouri, Illinois, Indiana, and states farther east. Similar to the trains that carry grain harvested in the Midwest to market, the Grain Belt Express Clean Line will move wind energy from its source in the grain belt of the country to markets with strong demand for low-cost, clean power.

The Grain Belt Express Clean Line will create thousands of temporary jobs and hundreds of permanent jobs, reduce pollution and water usage, and provide local benefits through property taxes.

Planning Corridors in Your Area

GRAIN BELT EXPRESS HAS IDENTIFIED POTENTIAL ROUTES

A network of potential routes has been identified for the transmission line and will be presented at the Public Open Houses. The potential routes are still under review at this time and are subject to change based on public feedback, so we are inviting landowners with property within 'planning corridors' centered around each potential route to provide their input.

At each Public Open House, we will provide information about the Grain Belt Express Clean Line project and collect feedback that will help us refine the potential routes and ultimately select a proposed route to file for approval with the Missouri Public Service Commission.

For more information about the routing process, please visit our website.

Aerial maps of the potential routes will be available at the Public Open Houses and posted on the project website **after** the meetings.
