MISSOURI PUBLIC SERVICE COMMISSION

CASE NO.: EA-2013-0098 and EO-2012-0367

SURREBUTTAL TESTIMONY

OF

DARRIN R. IVES

ON BEHALF OF

**KANSAS CITY POWER & LIGHT COMPANY
AND
KCP&L GREATER MISSOURI OPERATIONS COMPANY**

**Kansas City, Missouri
March 2013**

**Exhibit NO. 10
File NO. EA-2013-0098**

1 **Q: Please state your name and business address.**

2 A: My name is Darrin R. Ives. My business address is 1200 Main Street, Kansas City,
3 Missouri 64105.

4 **Q: Are you the same Darrin R. Ives who pre-filed Direct Testimony in this matter?**

5 A: Yes, I am.

6 **Q: On whose behalf are you testifying?**

7 A: I am testifying on behalf of Kansas City Power & Light (“KCP&L”) and KCP&L Greater
8 Missouri Operations Company (“GMO”) (collectively referred to as the “Applicants” or
9 “Companies”). KCP&L and GMO both are wholly-owned subsidiaries of Great Plains
10 Energy Incorporated (“GPE”).¹

11 **Q: Can you please outline the Surrebuttal Testimony that will be provided by the**
12 **Applicants?**

13 A: The Rebuttal Testimony put forth by the Missouri Public Service Commission (“MoPSC”
14 or “Commission”) Staff and the Office of the Public Counsel (“OPC”) ignores the
15 dramatic changes that have taken place within the electric industry in recent years that
16 have impacted transmission development in the country. The Iatan-Nashua and Sibley-
17 Nebraska City regional transmission projects (“Projects”) are the result of progressive
18 changes in national electric transmission law and policy that have emphasized regional
19

¹ GPE is a public utility holding company and does not own or operate any significant assets other than the stock of its operating subsidiaries KCP&L and GMO. KCP&L, through its employees and resources, is currently taking steps to move forward on the Projects, addressed in this testimony, on behalf of itself, as well as on behalf of GMO, pursuant to the terms and conditions set forth in the October 10, 2008 Joint Operating Agreement between KCP&L and GMO. Subsequent references in this testimony to GMO’s responsibilities with respect to the Projects are made in this context.

1 and interregional planning and construction of transmission. These changes began even
2 prior to the issuance of Federal Energy Regulatory Commission (“FERC”) Order No.
3 1000 in 2011. Implementing these changes requires ratemaking treatment for regional
4 transmission projects different from the historical cost recovery and revenue crediting
5 that has been used for transmission projects built primarily to serve local, retail load.
6 Staff and OPC rely on the historical ratemaking treatment in evaluating whether
7 Transource Missouri LLC (“Transource Missouri”) ownership of the Projects results in a
8 detriment to KCP&L’s and GMO’s retail customers. This historical rate treatment is
9 inapplicable to these regional Projects.

10 Staff and OPC rely on a flawed set of assumptions in their analyses to support
11 their recommendation that the Application of KCP&L and GMO for authority to transfer
12 certain transmission property and for other related determinations (Case No. EO-2012-
13 0367) and the Application of Transource Missouri for a Certificate of Convenience and
14 Necessity and Request for Waiver (Case No. EA-2013-0098) (collectively referred to as
15 “Applications”) be denied by the MoPSC. The overall purpose of our Surrebuttal
16 Testimony is to demonstrate these flaws and, in doing so, provide responsive testimony
17 and evidence that the proposed transaction is in the public interest for the State of
18 Missouri, including KCP&L’s and GMO’s retail customers.

19 Staff witness Charles Hyneman and OPC witness Ryan Kind incorrectly conclude
20 that the proposed transaction will greatly increase the cost of transmission service to the
21 Companies’ retail customers. Witness Charles Locke will refute this claim by explaining
22 how Mr. Hyneman and Mr. Kind incorrectly calculate effects on retail customers,
23 focusing on flawed assumptions about ratemaking treatment for the Projects, should the

1 MoPSC deny the Applications and the Projects are built by GMO. Additionally, I will
2 demonstrate that approval of the Applications will in fact reduce the cost of transmission
3 service to the Companies' retail customers when appropriate ratemaking is applied.

4 Staff and OPC contend in their Rebuttal Testimony that the Applicants'
5 motivations for creating Transource Energy, LLC ("Transource") are somehow different
6 than the reasons presented in the Applications. Witnesses Michael Deggendorf, Antonio
7 Smyth, Kevin Bryant, and I will respond directly to these allegations. In doing so, we re-
8 emphasize the need for, and the long-term value of, the transaction to electric customers
9 in the State of Missouri.

10 Staff and OPC also question the specific benefits that Transource Missouri
11 ownership of these Projects will bring to customers in Missouri, including the availability
12 of more efficient financing to transmission-only utilities and the operational cost savings
13 resulting from the participation of American Electric Power Company, Inc. ("AEP").
14 Witnesses Jerald ("Randy") Boteler and Scott Moore will provide additional evidence in
15 support of the expected financing cost savings and operational cost savings, respectively.

16 Finally, Staff and OPC have concerns about the proposed waiver of or variance
17 from the MoPSC's Affiliate Transaction Rule ("Rule"). I will address these concerns as
18 well as respond to a number of other specific topics raised by Staff and OPC.

19 **Q: What is the purpose of your Surrebuttal Testimony?**

20 A: I will respond to certain ratemaking matters and positions taken in the Rebuttal
21 Testimony of Mr. Hyneman, Mr. Murray, and Mr. Kind. I will show that they have based
22 their conclusions that the construction of the Projects by Transource Missouri does not
23 promote the public interest and that the transfer of the Projects' facilities from KCP&L

1 and GMO to Transource Missouri is detrimental to the public interest on: (1) an outdated
2 understanding of electric transmission; (2) an inappropriate Missouri ratemaking
3 methodology; and (3) a lack of understanding of Southwest Power Pool, Inc. (“SPP”)
4 cost and revenue allocation. I will then demonstrate how the Applications are in the
5 public interest and provide a supportive quantitative analysis using appropriate
6 ratemaking methodology for regionally cost allocated transmission projects.

7 Finally, I will also refute Staff and OPC allegations regarding the reasons for
8 forming Transource, the Affiliate Transactions Rule, the impact of the stipulations in the
9 Companies’ Regional Transmission Organization (“RTO”) participation in Case Nos.
10 EO-2006-0142 and EO-2009-0179 on rate setting principles, the value of Notifications to
11 Construct (“NTCs”), and the ability of GMO to novate the Projects.

12 **Q: Why do you say that Staff has an outdated understanding of electric transmission?**

13 A: Historically, vertically integrated electric utilities have built transmission for the primary
14 purpose of reliably moving the electricity they generate to their native load customers.
15 To the extent they have any excess capacity in those transmission lines, they make it
16 available for wholesale sales of electricity. Staff erroneously assumes this model applies
17 to the Projects underlying these Applications. Nothing could be further from today’s
18 reality regarding transmission. Most of today’s transmission projects, including the
19 Projects addressed in these cases, are planned regionally and even interregionally, not
20 locally by the incumbent utility. They are designed to move electricity regionally and
21 interregionally, not locally. They are being built to respond to regional and interregional
22 needs to accommodate wholesale sales of electricity and to meet the public policy
23 objectives of numerous states, such as the production and export of wind energy.

1 **Q: Why do you say that Staff has used an inappropriate ratemaking methodology in its**
2 **analysis in Rebuttal Testimony?**

3 A: Staff employs the MoPSC’s historical, retail cost of service ratemaking methodology to
4 analyze how the investment in the Projects “should” be recovered and how the return on
5 the unrecovered investment “should” be earned. Staff ignores the ratemaking
6 methodology employed by SPP to ensure recovery of, and recovery on, regional
7 transmission investment. The historical, retail cost of service ratemaking methodology
8 championed by Staff is inapplicable to the regional transmission projects sponsored by
9 SPP, such as the Projects underlying this case.

10 **Q: Why do you say that Staff does not understand SPP cost and revenue allocation?**

11 A: SPP has reviewed and analyzed the cost and revenue allocation associated with the
12 Projects. Consistent with its tariff, SPP has determined that 96% of the cost of the
13 Projects will be paid by regional, not local GMO, customers. In other words, only 4% of
14 the cost of the Projects will be borne by GMO retail customers. These costs will be
15 recovered by SPP through its tariffed rates. Staff ignores this fact. Instead, Staff assumes
16 that GMO retail customers will be responsible for 100% of the costs of these Projects.
17 Staff then employs an erroneous “crediting” process, which I discuss later in my
18 Testimony, that Staff would have the Commission believe will result in a proper payment
19 by GMO retail customers when in fact they really pay nothing and receive a substantial
20 revenue credit. This outcome is illogical as it concludes that GMO retail customers
21 should receive a windfall solely from construction of regional transmission projects by
22 GMO in its certificated service territory.

1 **I. Rate Treatment and Customer Impact**

2 **Q: Please summarize your position on Staff's customer impact analysis related to the**
3 **Applications.**

4 A: The overarching assumption upon which Staff has based its conclusions -- that the
5 Projects, if not placed in GMO's rate base, will increase costs (instead of creating a
6 windfall as Staff proposes) for retail customers, and therefore it is not in the public
7 interest to permit Transource Missouri to own the Projects -- is premised on an
8 inappropriate ratemaking methodology and an erroneous crediting mechanism.

9 The quantitative analysis I have prepared and presented as Schedule DRI-8
10 illustrates that the approval of the Applications are in the public interest. When the
11 proper assumptions and appropriate cost allocation method for regional projects are
12 utilized in the quantitative analysis, the results do not show a detriment as Mr. Hyneman
13 claims. Rather, the results of the quantitative analysis show a benefit to customers if
14 Transource Missouri builds the Projects.

15 **Q: Please explain your analysis.**

16 A: Just as Staff did, I developed an analysis depicting the retail customer impact for the
17 Projects under a GMO ownership scenario as compared to a Transource Missouri
18 ownership scenario, but I applied appropriate ratemaking treatment for regionally cost-
19 allocated transmission projects. As I will explain in more detail later in this testimony,
20 under appropriate ratemaking treatment revenues must follow costs. Revenues from SPP
21 for the regional transmission investments should not be used to subsidize the incumbent
22 utilities' retail customers. When cost allocation is applied in the appropriate manner,
23 GMO customers pay a cost proportional to their load, regardless of who constructs the

1 facilities. To illustrate this point, I used the same model Mr. Hyneman used in his
2 Rebuttal Testimony analysis, provided in Schedule CRH-1.

3 **Q: What were the results of your analysis?**

4 A: My analysis shows that there is a benefit to GMO customers if Transource Missouri
5 builds the Projects, in stark contrast to the significant detriment asserted by Mr. Hyneman
6 and Mr. Kind. The below table illustrates this benefit to customers over a 5-year, 10-
7 year, and 20-year timeframe under three different scenarios: (1) Staff Witness
8 Hyneman's analysis and assumptions; (2) my analysis and assumptions without including
9 additional financing and capital cost savings; and (3) my analysis and assumptions
10 including additional financing and capital cost savings expected under Transource
11 Missouri ownership. The calculations for columns two and three, by year, are reflected
12 on the attached schedules labeled Schedule DRI-8.

Benefit to GMO Customers if Transource Missouri Builds the Projects			
	(1) Hyneman	(2) Ives (No Savings)	(3) Ives (Savings)
5-Year	(\$26,858,019)	\$265,577	\$439,361
10-Year	(\$47,900,378)	\$473,648	\$783,586
20-Year	(\$75,659,332)	\$748,134	\$1,237,685

13 As the table illustrates, my analysis shows no detriment to customers even in the
14 unlikely and pessimistic scenario of no financing or capital cost savings from Transource
15 Missouri. If reasonable estimates of these benefits are included, then an even larger
16 benefit to customers is shown if Transource Missouri builds the Projects. By approving
17 the applications, GMO's retail customers will benefit by lower costs as shown in column
18 (3) in the table above.

1 **Q: Why does your analysis differ from Mr. Hyneman's analysis?**

2 A: My analysis uses the appropriate cost allocation method for the regional Projects, which
3 in turn, matches retail costs to the wholesale cost allocation under SPP's transmission
4 tariff. Mr. Hyneman's analysis used a ratemaking methodology based on a subsidization
5 of GMO retail customers, resulting in a mismatch of costs. Mr. Locke demonstrates in
6 his Surrebuttal Testimony how Staff's faulty assumptions and flawed methodology for
7 state jurisdictional ratemaking, including Full Revenue Crediting, leads to inaccurate,
8 unreasonable, and unfair conclusions. In short, a \$380 million transmission Project such
9 as the Sibley-Nebraska City Project, 96% of which is paid for by SPP customers other
10 than GMO cannot be put in GMO's retail rate base in the manner proposed by Staff and
11 OPC and produce a reasonable assignment of costs and revenues.

12 Specifically, my analysis of the costs to GMO retail customers reflects their 4%
13 load ratio share and reflects appropriate ratemaking in each scenario. By correcting for
14 Staff and OPC's inappropriate and flawed ratemaking assumptions and methodology, I
15 have corrected Mr. Hyneman's analysis to present an apples-to-apples comparison for
16 evaluation of GMO versus Transource Missouri ownership of the Projects, utilizing
17 appropriate ratemaking treatment for regionally cost-allocated transmission projects.

18 **Q: Have you made any other changes to the input variables from Mr. Hyneman's**
19 **calculations for the purpose of this new analysis?**

20 A: Yes. These changes affect Mr. Hyneman's GMO retail rate base calculation and GMO's
21 wholesale calculation. In addition, I have added a specific calculation of Transource
22 Missouri wholesale rates, both with and without financing and capital cost savings.

1 **Q: Please summarize your updated inputs for the GMO retail calculation.**

2 A: The inputs are based on the results of GMO's most recent rate case (Case No. ER-2012-
3 0175). The capital structure has been adjusted to 50% equity/50% debt, to reflect GMO's
4 long-term goal for this balanced capital structure.

5 **Q: Please summarize your updated inputs for the GMO wholesale calculation.**

6 A: The capital structure equity percentage is set at 50% to reflect GMO's stated long-term
7 goal for this capital structure. The GMO embedded cost of debt of 5.77% is a projection
8 based on the actual cost of debt as of the end of 2012, adjusted for planned financing in
9 2013 at indicative interest rates provided by investment banks, and further adjusted for
10 the incremental cost of financing the Projects. The incremental cost of financing for the
11 Projects is 5.25%, and is based on a projection for GMO debt financing using a current
12 indicative rate adjusted for an estimated increase in US treasury rates by 2017 based on a
13 forward curve from Bloomberg. Reflecting Direct Testimony that GMO anticipates it
14 would receive the same FERC Project incentives, the GMO Wholesale Return on Equity
15 ("ROE") of 12.1% for the Sibley-Nebraska City Project includes GMO's current 10.6%
16 base ROE, plus a 50 basis point incentive for RTO membership and a 100 basis point
17 incentive specific to the Project. The 11.1% ROE for the Iatan-Nashua Project includes
18 the 10.6% base ROE and the 50 basis point incentive for RTO membership.

19 **Q: Please summarize your inputs for the Transource Missouri wholesale calculation.**

20 A: The Transource Missouri inputs reflect the filed settlement in Transource Missouri's
21 FERC proceeding (Docket No. ER12-2554-000). It is important to point out that these
22 parameters were not available until this settlement was filed with FERC on February 27,
23 2013. The ROE for the Sibley-Nebraska City Project is 11.30%, which includes a 9.8%

1 base ROE, plus a 50 basis point incentive for RTO membership and a 100 basis point
2 incentive specific to the Project. The ROE for the Iatan-Nashua Project is 10.3%, which
3 includes the 9.8% base ROE and the 50 basis point incentive for RTO membership. The
4 post-construction cap of 55% on the equity component of its capital structure is reflected
5 in the analysis.

6 For cost of debt, we used two inputs. For the “no savings” case (column 2
7 above), the cost of debt was projected to be 5.25%, which is the same incremental rate
8 assumed in the GMO wholesale calculation. For the “savings” case (column 3 above),
9 the cost of debt was adjusted down to 5.10% to reflect the 15 basis point lower cost of
10 capital for transmission-only companies, as supported by Witness Boteler in his
11 Surrebuttal Testimony. Although Witness Boteler testified to a potential savings between
12 15 and 30 basis points, for conservatism, I used the low end of this range for my analysis.
13 To the extent Transource Missouri were able to obtain savings beyond this 15 basis point
14 level, those savings would directly flow to the customer and result in an even higher
15 overall savings as compared to the GMO ownership scenario.

16 Finally, in the “savings” case, the capital cost of the Sibley-Nebraska City project
17 was reduced by 1.58% to reflect the potential cost savings supported by Witness Moore
18 in his Surrebuttal Testimony. I arrived at this reasonable estimate of savings as follows:
19 Witness Moore states in his Surrebuttal Testimony that AEP is able to negotiate 5% to
20 7% savings versus standard pricing on materials and up to 10% in certain cases. I
21 assumed 6% savings on materials and multiplied this by the approximately 26% of the
22 total capital cost of the Sibley-Nebraska City Project representing materials, to arrive at
23 the 1.58% potential cost savings used in my analysis.

1 **Q: Please summarize the appropriate ratemaking methodology for regional**
2 **transmission investments.**

3 A: As described in detail in the Surrebuttal Testimony of Charles Locke, SPP Transmission
4 Customers, including KCP&L and GMO, must pay their respective load ratio share of
5 regionally funded transmission projects. SPP bills its Transmission Customers for their
6 load ratio share under Schedule 11 of its FERC-approved Open Access Transmission
7 Tariff (“SPP Tariff”). The costs of these SPP-directed, regional transmission
8 investments, whether they are made by incumbent utilities or transmission-only
9 companies, are appropriately recovered in full pursuant to the SPP Tariff. There is no
10 need to also include these Projects in retail rate base. Even if the regional transmission is
11 constructed by an incumbent utility within its certificated service territory, the investment
12 is not recovered through inclusion in retail rate base but rather through the SPP Tariff.
13 Accordingly, Full Revenue Crediting for facilities constructed by an incumbent utility
14 within its service territory is inappropriate.

15 Indeed, revenues must follow costs. Revenues for regional transmission
16 investments come from SPP’s Transmission Customers and are paid by SPP under the
17 SPP Tariff to the Transmission Owner making the investment. Revenues from SPP for
18 the regional transmission investments should not be used to subsidize incumbent utilities’
19 retail customers. When cost allocation is applied in the appropriate manner, as explained
20 by Mr. Locke, GMO customers pay a cost proportional to their load, regardless of who
21 constructs the facilities. When the appropriate methodology is used to calculate the
22 impact of these two Projects on GMO’s customers, the alleged detriment identified in Mr.
23 Hyneman’s model is non-existent.

1 The diagram below illustrates the correct relationship of cost and recovery, as
 2 well as how retail customers receive equal treatment when the retail ratemaking is
 3 consistent with cost responsibility under the SPP Tariff.

4

5 **Q: Why is Mr. Hyneman’s methodology flawed and inappropriate?**

6 A: In effect, Mr. Hyneman makes the extraordinary claim that it is appropriate for GMO’s
 7 retail customers to be subsidized by the regionally cost-allocated transmission Projects.
 8 In his analysis, the amount of revenue credit more than offsets 100% of the GMO retail
 9 customers’ 4% load ratio share of costs, improperly creating a net credit to GMO’s retail
 10 customers for the Projects being built. In short, his analysis results in an unwarranted and
 11 unfair windfall to GMO’s customers rather than GMO’s customers being responsible to
 12 pay their load share of the regional Projects for which they will realize proportionate
 13 benefits.

1 This inappropriate subsidization of GMO’s retail customers is inequitable in its
2 customer impacts because it results in others throughout SPP paying the full SPP Tariff
3 rate while GMO’s retail customers effectively receive a payment. It also results in a
4 “double dip” because GMO retail customers receive both (1) improved reliability and
5 access to lower cost generation resources (including new access to wind and other
6 renewable resources) which was the basis for the Projects being approved, and (2) an
7 inappropriate financial gain through reduced retail rates created by the Full Revenue
8 Credit ratemaking assumption employed by Mr. Hyneman. Furthermore, this
9 subsidization takes retained earnings of GMO from funds appropriately earned and
10 received under the FERC-approved SPP Tariff. The approach advanced by Mr.
11 Hyneman and Mr. Kind results in unreasonable and improper ratemaking for such
12 regionally cost-allocated transmission assets. In his Surrebuttal Testimony, Mr. Locke
13 more fully discusses the inappropriateness of the Staff and OPC proposed ratemaking
14 methodology.

15 **Q: How does Staff’s and OPC’s analysis unfairly benefit GMO’s customers?**

16 A: Mr. Hyneman and Mr. Kind assume that just because regional transmission lines are
17 located in Missouri and are owned by an incumbent utility, the utility’s retail customers
18 are entitled to credits for revenues received by the utility from SPP’s Transmission
19 Customers pursuant to the SPP Tariff. On the contrary, revenue received by a utility
20 based on established rates does not belong to customers. For example, in the Report and
21 Order in the most recent Ameren Missouri rate case (Case No. ER-2012-0166), the
22 MoPSC addressed whether a portion of the income tax benefit realized on dividends paid
23 on Ameren Corporation shares held in Employee Stock Ownership Plan (“ESOP”)

1 accounts reduce Ameren Missouri's revenue requirement. Staff and Intervenors argued
2 that since Ameren Missouri earns those dividends from rates paid by customers, a portion
3 of the tax benefits derived from those dividend payments should flow back to Ameren
4 Missouri's customers. The MoPSC determined that such arguments were not well
5 founded.

6 The MoPSC's Conclusion of Law in the Ameren rate case stated as follows:

7 The law in Missouri is crystal-clear: 'When the established rate of a
8 utility has been followed, the amount so collected becomes the property of
9 the utility, of which it cannot be deprived by either legislative or judicial
10 action without violating the due process provisions of the state and federal
11 constitutions.' Once Ameren Missouri has earned and retained a profit,
12 ratepayers no longer have a claim to those earnings, whether they are
13 passed to a parent corporation in the form of dividends or spent or
14 invested in some other way by the company.

15 In further support of its decision, the Commission noted in its order that:

16 Ameren Corporation pays its dividends out of its retained earnings at the
17 sole discretion of its Board of Directors. Some of the money in its
18 retained earnings may have ultimately been derived from money collected
19 from ratepayers for the sale of electricity, but Ameren Corporation could
20 just as easily use funds derived from one of its other subsidiaries to pay a
21 dividend.

22 The MoPSC also stated:

23 The important fact is that retained earnings belong to the company and its
24 shareholders, not to ratepayers. Ameren Corporation can do whatever it
25 wants with its retained earnings. If it chooses to use those earnings to
26 declare a dividend to its shareholders, it may do so. If it chooses to use
27 those retained earnings to throw a giant party or invest in property on the
28 moon, it must answer only to its shareholders, not to this Commission, and
29 not to ratepayers.

30 The language in the order clearly states that when the established rate of a utility has been
31 followed, the amount so collected becomes the property of the utility, not the customers.
32 This is directly on point with the situation posited by Mr. Hyneman here, where KCP&L
33 and GMO would receive revenues as Transmission Owners for regional transmission

1 investments under the SPP Tariff. Mr. Hyneman's assertion that these revenues should
2 instead flow back to the retail customers to offset their obligations as a transmission
3 customer is inconsistent with the Commission's view on utility retained earnings in the
4 recent Ameren Order, and should not be adopted by the MoPSC. Rather, it reduces the
5 economic incentive for incumbent utility transmission owners to build regional
6 transmission projects in Missouri.

7 **Q: Do the existence of the Stipulation and Agreements and Service Agreements for**
8 **KCP&L and GMO referenced by Staff Witness Stahlman at page 3 of his Rebuttal**
9 **Testimony preclude the appropriate ratemaking treatment you are advocating for**
10 **the regional Projects?**

11 A: No. Mr. Locke describes in his Surrebuttal Testimony why these agreements do not
12 preclude the appropriate ratemaking treatment for the regional Projects.

13 **Q: OPC witness Kind asserts at page 10 of his Rebuttal Testimony that the rate**
14 **regulation framework for these Projects, if owned by GMO, would be similar to the**
15 **practice of crediting Missouri retail customers for the revenues from off-system**
16 **sales margins from generation assets that Missouri customers fund through rates.**
17 **Do you agree with this analogy?**

18 A: No. Mr. Kind describes a generation asset that was developed to serve the needs of retail
19 customers and 100% of which was paid for by retail customers. In that situation, retail
20 customers may get value from the sales made from that generation facility. This is
21 somewhat analogous to historical treatment for transmission built for local reliability.
22 The generator scenario, however, is not analogous to regionally allocated transmission
23 projects. In the case of regionally allocated transmission projects, the transmission asset

1 is developed to serve the needs of SPP's regional Transmission Customers, who will pay
2 for the Project. The GMO retail customers are responsible for only 4% of the Project
3 cost, which is their load share. Therefore, they are not entitled to 100 % revenue credit
4 associated with the Project. Thus, Mr. Kind's analogy does not hold true for regionally
5 allocated projects such as the Projects and would be inconsistent with the SPP Tariff.

6 These regional Projects will provide region-wide benefits for SPP's members,
7 including a reduction of transmission congestion resulting in lower cost power supply and
8 facilitation of the addition of renewable and non-renewable generation to the grid. These
9 regional Projects provide a benefit to the entire SPP RTO region, not just the local service
10 territory, and therefore are paid for by customers throughout the SPP region, including
11 GMO customers, based on their load share. For example, Oklahoma Gas and Electric's
12 customers are paying approximately 13-14% of the cost of these Projects. These regional
13 benefits are also described in the Surrebuttal Testimony of Mr. Locke.

14 Due to their regional nature, the costs of these Projects will be borne by all SPP
15 Transmission Customers, pursuant to the cost allocation methodologies developed by
16 SPP and approved by FERC. The cost of these Projects will, and should be, borne
17 regionally by utility customers across SPP. All of the costs of service will be recovered
18 by the Transmission Owner under the SPP Tariff. In this circumstance, there is no need
19 to include the Projects in retail rate base; GMO customers will pay for their share of the
20 Projects through payments to the SPP, not through recovery of costs in retail rate base.
21 GMO customers will, and should, pay only GMO's respective load ratio share of their
22 cost, regardless of who builds them.

1 Under Staff's and OPC's presumed ratemaking approach to regional transmission
2 projects, GMO retail customers would not pay their load ratio share of the Project costs.
3 To the contrary, Staff and OPC would have them receive an unwarranted and
4 unreasonable windfall from the construction of the Projects in addition to the benefits that
5 result from these transmission grid improvements as previously discussed. As noted,
6 these Transmission Customer benefits are essentially ignored by Staff and OPC in their
7 Rebuttal Testimony.

8 **II. Reasons for Forming Transource**

9 **Q: Mr. Hyneman challenges the validity of five reasons why GPE and AEP formed**
10 **Transource at pages 39-41 of his Rebuttal Testimony. Please respond to Mr.**
11 **Hyneman's challenges.**

12 A: Surrebuttal witness Kevin Bryant will address the allegations related to the first and
13 second reasons why GPE and AEP formed Transource in his Surrebuttal Testimony.
14 Surrebuttal witnesses Randy Boteler, Scott Moore, and I will address Mr. Hyneman's
15 allegations related to the third, fourth, and fifth reasons for forming Transource.

16 **Q: Mr. Hyneman at page 40 of his Rebuttal Testimony, and Mr. Murray at page 8 of**
17 **his Rebuttal Testimony, suggest that the Applicants have no analysis or evidence to**
18 **support the claim that Transource Missouri should attract new and different**
19 **sources of capital to its business and therefore lower transmission costs for Missouri**
20 **customers. Do you have information to support this claim?**

21 A: Yes. I did not provide specifics in my Direct Testimony because Transource Missouri is
22 a new company and thus does not have specific experience accessing capital markets that
23 could form the basis of a quantitative analysis. However, Surrebuttal witness Boteler

1 testifies to AEP's experience in relevant, comparable ventures. In particular, he explains
2 the financial benefits of transmission-only businesses from a cost of debt perspective.

3 **Q: Mr. Hyneman at page 40 suggests that because KCP&L is an experienced utility, it**
4 **is not clear why KCP&L and GMO could not compete without AEP as a partner in**
5 **a post-FERC Order No. 1000 environment. How do you respond to Mr. Hyneman?**

6 A: With the removal of the right of first refusal, KCP&L and GMO would be competing for
7 future projects against considerably larger companies with greater buying power and
8 procurement advantages. Because they lack the size and scale of other potential
9 competitors, having to compete directly with larger companies puts KCP&L and GMO at
10 a significant disadvantage in a post-FERC Order No. 1000 environment. A simple
11 economic argument supports better pricing opportunities with larger volume, and lower
12 costs to construct competitively-bid transmission projects for such larger companies.
13 This is further explained by Applicant witness Moore in his Surrebuttal Testimony.

14 **Q: Has the MoPSC acknowledged how increased scale and scope of an organization can**
15 **lead to procurement savings?**

16 A: Yes. In its July 1, 2008 Order in Case No. EM-2007-0374 ("Merger Case"), the
17 Commission adopted GPE and KCP&L witness Zabors' pre-filed testimony in support of
18 the overall synergy calculations of GPE's merger with Aquila, Inc. as a finding of fact².
19 In his testimony in the Merger Case, Mr. Zabors stated:

20 The \$50 million [Supply Chain Synergy] savings over the five-year
21 period represents procurement savings resulting from economies of
22 scale and improved logistics. The integration will lead to procurement
23 savings from greater scale and scope, more effective use of contracted
24 services in operations, and also enable cost-effective investments in

² Report and Order, Case No. EM-2007-0374, p. 93, ¶ 237, (July 1, 2008).

1 centralization of physical storage and better management of
2 inventory.³

3 The merger of these Companies has resulted in synergy savings that exceeded those
4 projected. Taking this a step further, the size and scale of the Companies' spend is
5 dwarfed when compared to a much larger company like AEP. The table below illustrates
6 the significant difference in spend between the two companies.

10-Year Comparison Investment in New Utility Plant		
	GPE Operating Subsidiaries	AEP Operating Subsidiaries
Utility Plant Spend	\$4.7 Billion	\$14.6 Billion
Transmission Plant Spend	\$260 Million*	\$3.7 Billion

7 *Approximately \$380 Million including pre-acquisition Aquila additions

8 As highlighted in my Direct Testimony, the procurement benefit from adding a
9 partner with the size and scale of AEP is one of the reasons this partnership is attractive
10 to GPE. Through the partnership with AEP, Transource Missouri will be able to leverage
11 several of these benefits, which are further explained in the Surrebuttal Testimony of
12 Applicant witnesses Moore and Boteler.

³ Direct Testimony of Robert T. Zabors, Case No. EM-2007-0374, p. 11; ll. 17-21.

1 **Q: Do Staff's statements, at page 13 of Witness Alan Bax's Rebuttal Testimony and at**
2 **page 4 of Mr. Hyneman's Rebuttal Testimony, that the Projects are not FERC**
3 **Order No. 1000 projects have any merit on how they are handled from a**
4 **ratemaking perspective?**

5 A: No. Both the Projects at issue here and similar post-FERC Order No. 1000 regional
6 projects are regionally funded high-voltage transmission projects. For ratemaking
7 purposes, both would be treated the same. There is no question that these Projects are
8 reflective of the types of projects that FERC Order No. 1000 addresses. As witness
9 Locke describes in his Surrebuttal Testimony, SPP directed these Projects as part of a
10 new regional environment that anticipated FERC Order No. 1000. It is only due to
11 timing of the implementation of FERC Order No. 1000 that GMO and KCP&L have a
12 right of first refusal for these two Projects. However, that right has no bearing on the
13 appropriate ratemaking treatment for regionally cost-allocated transmission projects.

14 **Q: At page 41 of his Rebuttal Testimony Mr. Hyneman states he could not find any**
15 **evidence to support the Applicants' claim that Transource provides additional**
16 **expertise in the construction of projects which could lower project costs. Is there**
17 **any evidence that AEP's experience and expertise will lower the cost of the**
18 **Projects?**

19 A: Yes. In his Surrebuttal Testimony, Applicant witness Moore provides examples of how
20 AEP's expertise and supplier relationships are a benefit to the partnership and can result
21 in overall lower costs for the Projects.

1 **Q: Mr. Hyneman asserts that, contrary to providing evidence of lowering construction**
2 **costs, Transource Missouri has admitted it may have to incur higher costs to obtain**
3 **new rights of way and renegotiate existing rights of way than would KCP&L or**
4 **GMO if they were to construct the Projects. Do you agree that the examples**
5 **mentioned in Transource Missouri’s August 31, 2012 filing to FERC support this**
6 **claim?**

7 A: No. Mr. Hyneman references a statement at page 41-42 of his Rebuttal Testimony that
8 addresses a 12-mile greenfield middle segment of the proposed route of the Iatan-Nashua
9 Project, and highlights the statement: “These individual negotiations can prove costly and
10 time consuming with possible changes to the preferred route to accommodate any
11 difficulties in obtaining the necessary rights-of-way.” In general, the section of the route
12 described will require the same new rights-of-way mentioned whether GMO or
13 Transource Missouri builds that section of line.

14 **Q: Are you suggesting that there will be no cost increases of any kind if Transource**
15 **Missouri builds the two Projects as opposed to KCP&L or GMO?**

16 A: No. Given that there are many variables in such complex business transactions, it is
17 possible that there could be certain cost increases attributable to Transource Missouri
18 building the Projects. For example, there may be a need to obtain an additional right of
19 way for some points along the Projects’ route in the event that both Transource Missouri
20 and KCP&L or GMO would need rights to the same section of line. However, if such a
21 specific cost increase were to occur, it would be more than offset by the other benefits
22 identified in the testimony of the Applicants, resulting in an overall benefit to customers
23 and certainly no net detriment because Transource Missouri is building the Projects.

1 **Q: Mr. Kind asserts at page 18 of his Rebuttal Testimony that the granting of a CCN**
2 **for Transource Missouri will not promote the public interest because it will “reduce**
3 **the ability of this Commission to effectively regulate and oversee the operations and**
4 **maintenance of the transmission facilities that are vital to the provision of safe and**
5 **adequate service to the customers of KCPL and GMO and the rest of the public.”**
6 **Do you agree?**

7 A: No. The MoPSC’s oversight would not be reduced as Mr. Kind describes. Because all
8 costs associated with the Projects will be recovered pursuant to a FERC-jurisdictional
9 rate, it is my understanding that the MoPSC does not have authority to disallow any costs
10 associated with regional transmission projects. This is true regardless of whether
11 KCP&L and GMO own the Projects or Transource Missouri owns the Projects.
12 However, the implementation protocols that underlie both the Companies’ and
13 Transource Missouri’s respective FERC-accepted formula rates require them to calculate
14 each year the appropriate rate to be charged to customers for the following calendar year.
15 The companies must then publish the proposed rate so that interested stakeholders, such
16 as the MoPSC, may comment on and, if necessary, challenge elements of a rate.
17 Furthermore, regional transmission projects that are rate regulated by FERC still provide
18 the opportunity for the MoPSC to be involved in the review process, such as through the
19 Regional State Committee within SPP and Federal Power Act Section 206 complaint
20 filings at FERC regarding transmission formula rates.

21 Additionally, Transource Missouri will construct, operate, and maintain these
22 Projects consistent with all applicable safety and reliability standards and in a prudent
23 manner. It is important to note here that both GPE and AEP have operating utilities with

1 years of experience doing this work and doing it well. One of the benefits of this
2 transaction is that KCP&L and GMO retain the ability to maintain and operate lines in
3 their certificated service territories, including maintaining responsibility for North
4 American Electric Reliability Corporation (“NERC”) Critical Infrastructure Protection
5 Standards (“CIPS”) compliance. This was an important factor in GPE’s decision to
6 partner with AEP in order for KCP&L and GMO to retain this opportunity to maintain
7 and operate lines in their certificated service territories in a FERC Order No. 1000
8 competitive transmission environment.

9 Finally, to address any safety and prudence concerns of the MoPSC, Transource
10 Missouri has agreed to provide the Commission, as necessary to perform its statutory
11 duties, access to a number of documents, including: (i) Work papers of the external
12 auditors of Transource and of Transource Missouri; (ii) Total Company and Missouri
13 Jurisdictional Financial Statements on a Quarterly Basis of Transource and of Transource
14 Missouri; (iii) Monthly Operating/Financial Reports of Transource and of Transource
15 Missouri (used for internal reporting of the utility ongoing operations and earnings
16 results); and (iv) Construction and Operating Budgets for the Current and Succeeding
17 Three Years of Transource and of Transource Missouri. Transource Missouri also has
18 agreed to work with Staff to provide office space in Columbus, Ohio if it is more efficient
19 for the Staff to perform its statutory duties in Columbus, rather than by reviewing copies
20 of book and records provided in Missouri.

1 **III. Affiliate Transactions Rule**

2 **Q: Mr. Hyneman suggests at page 53 of his Rebuttal Testimony that the MoPSC not**
3 **grant KCP&L and GMO a waiver of or variance from the Rule. Do you agree?**

4 A: No. The Applicants and Transource through its regulated utility subsidiaries such as
5 Transource Missouri will be engaged in regulated operations. Consistent with the intent
6 of the Rule, at-cost transactions between these companies would not result in any
7 subsidization of non-regulated activities by regulated customers and would result in
8 lower overall costs of the Projects for customers.

9 **Q: Do you agree with Mr. Hyneman’s statements at page 50 of his Rebuttal Testimony**
10 **that the Rule “provides [the] public the assurance that utility rates are not adversely**
11 **impacted by the utilities’ non-regulated activities” and that without the protections**
12 **afforded by the Rule “ratepayers would clearly be subsidizing non-regulated**
13 **operations”?**

14 A: I agree that the Rule assures the public that retail rates are not adversely impacted by non-
15 regulated activities. However, no such risk exists in the transactions that are to occur
16 between Transource, Transource Missouri, KCP&L, and GMO. This is because
17 Transource, through its regulated utility subsidiaries like Transource Missouri, will be
18 engaged in *regulated operations*, under both the MoPSC and FERC. Transource was
19 established to develop, acquire, construct, finance, own, operate, and maintain regulated
20 regional electric transmission projects through its regulated utility subsidiaries. Upon
21 approval of Transource Missouri’s CCN application and transfer of the transmission
22 property as requested by KCP&L and GMO, Transource Missouri will own transmission
23 property in the State of Missouri and, thus, will be a public utility regulated by the

1 MoPSC. Because Transource Missouri's operations in Missouri will be regulated by the
2 MoPSC pursuant to the CCN and Transource Missouri will be rate-regulated by FERC,
3 there can be no impact of non-regulated activities on Missouri rates resulting from
4 Transource Missouri's operations.

5 I also agree that the Rule addresses the risk of customers subsidizing non-
6 regulated operations. Again, however, no such risk exists in the transactions that are to
7 occur between Transource Missouri and KCP&L and GMO, as the operations of
8 Transource Missouri are regulated operations. Even if the MoPSC were to find that
9 Transource Missouri's operations are non-regulated for the purposes of the Rule, and that
10 Transource Missouri is an affiliate of KCP&L for the purposes of the Rule, the at-cost
11 transactions between those companies would not result in any subsidization by
12 customers. Such transactions would be at-cost, would result in lower overall costs for
13 customers as at-cost transactions allow utility affiliates to efficiently share staff and
14 resources, and do not include a markup for profit.

15 **Q: Do you agree with Mr. Hyneman's Rebuttal Testimony at pages 55-56, and Mr.**
16 **Kind's Rebuttal Testimony at page 15, that Transource Missouri is a "non-**
17 **regulated affiliate" of KCP&L and GMO?**

18 **A:** No. As I describe above, Transource Missouri will be engaged in regulated operations.
19 Furthermore, arguably KCP&L, GMO, Transource, and its regulated utility subsidiaries
20 like Transource Missouri are not "affiliated entities" for the purposes of the Rule, as the
21 10% ownership interest that triggers a presumption of control is rebuttable, per 4 CSR
22 240-20.015(1)(C). If these companies are not "affiliated entities" as that term is defined

1 in 4 CSR 240-20.015(1)(A), then the Rule would not apply to transactions between those
2 companies.

3 **Q: At pages 53-54 of his Rebuttal Testimony, Mr. Hyneman attempts to distinguish**
4 **between operations that are regulated by state authorities and those that are**
5 **regulated by federal authorities. Do you agree with this distinction?**

6 A: I believe that this is a distinction without any consequence in this case. Because
7 Transource Missouri's operations in Missouri will be regulated by the MoPSC pursuant
8 to the CCN, it clearly is state-regulated. Thus, the operations of Transource Missouri are
9 not the "non-regulated operations" of a utility affiliate, the subsidization of which the
10 Rule seeks to prevent.

11 Furthermore, nowhere does the Rule state that an affiliate must be rate-regulated
12 by the MoPSC to be considered as engaged in regulated operations for the purposes of
13 the Rule. There is no language in the Rule limiting its applicability only to Missouri rate-
14 regulated utilities.

15 Additionally, KCP&L employees today are charging to three discrete jurisdictions
16 – FERC transmission customers, Kansas customers, and Missouri customers – with no
17 mark-up for profit, and there has been no assertion that such charges are subject to the
18 Rule. Kansas customers and the FERC Transmission Customers are not regulated by the
19 MoPSC, but under Mr. Hyneman's interpretation the Rule would require these regulated
20 customers to be subject to the asymmetric pricing requirements of the Rule.

1 **Q: Is Mr. Hyneman correct in his assertion at page 54 of his Rebuttal Testimony that**
2 **the Applicants have stated that Transource Missouri is not a Missouri jurisdictional**
3 **utility business?**

4 A: No. Mr. Hyneman alleges that KCP&L and GMO have asserted in their Application and
5 in data request responses that Transource Missouri will not be a MoPSC jurisdictional
6 utility business. That is not the case. Transource Missouri has applied to the
7 Commission for a CCN, and KCP&L and GMO have applied to transfer transmission
8 property to Transource Missouri. After such transfer and upon granting Transource
9 Missouri a CCN, I understand that the fact that Transource Missouri will own
10 transmission facilities in Missouri makes it a Missouri public utility subject to the
11 MoPSC's jurisdiction.

12 **Q: Mr. Hyneman refers, at pages 52-54 of his Rebuttal Testimony, to the commitment**
13 **made by KCP&L in Case No. EM-2001-464 that it and its affiliates will abide by the**
14 **Rule. Has the MoPSC granted a waiver or variance from this commitment?**

15 A: Yes. Transactions between KCP&L and GMO are not subject to the Rule, pursuant to a
16 variance the MoPSC granted in Case No. EM-2007-0374. Similarly, KCP&L, GMO, and
17 Transource Missouri will be engaged in regulated operations and subject to MoPSC
18 jurisdiction if Transource Missouri's application for a line CCN is granted. Thus,
19 granting the Applicants' request for a variance would be equally warranted here as well.

1 **Q: Do you agree with Mr. Hyneman’s Rebuttal Testimony at page 56 that a waiver of**
2 **or variance from the Rule will allow Transource to have a competitive advantage**
3 **over other competitive transmission providers?**

4 A: No. Mr. Hyneman assumes without evidence that other competitive transmission
5 providers will be unable to obtain goods and services at cost. Because services will not
6 be provided below cost, no advantage accrues to Transource Missouri that could not
7 accrue to any other entity competing for transmission projects under a similar
8 arrangement.

9 What is clear is that a waiver of or variance from the Rule should result in lower,
10 or at least competitive, costs to the ultimate transmission consumer, as at-cost
11 transactions allow utility affiliates to efficiently share staff and resources, and would not
12 include a mark-up for profit. Lowering costs is a primary function of competition. Thus,
13 Mr. Hyneman’s contention that a competitive advantage would accrue to Transource
14 Missouri, and that such an advantage is contrary to the purpose of competition is
15 illogical.

16 I also disagree with Mr. Hyneman’s characterization of the goods and services
17 exchanged at cost pursuant to the Services Agreements between the Applicants, attached
18 to my Direct Testimony as Schedules DRI-1 to DRI-3, as a “subsidization” of goods and
19 services. There is no subsidy. I also disagree with his statement that a waiver or variance
20 from the Rule is inconsistent with FERC Order No. 1000. FERC Order No. 1000 largely
21 eliminated the right of first refusal of incumbent utilities for building transmission within
22 their service areas, thus paving the way for increased competition in the construction and
23 ownership of regional transmission projects. Under an at-cost arrangement, each utility

1 bears its appropriate allocation of the costs of services that if obtained through a third
2 party market transaction, could include a markup for profit. Missouri customers and SPP
3 customers benefit from the construction and operation of transmission without the cost of
4 markups that often accompany purchases from third parties.

5 **Q: Mr. Kind, at page 16 of his Rebuttal Testimony, discusses the benefit KCP&L and**
6 **GMO customers realize from the asymmetrical pricing requirements of the Rule,**
7 **stating that those customers would benefit from 100% of increased revenues by**
8 **charging the higher of cost or market under the Rule, but would only receive about**
9 **8% of the benefit (based on their load-ratio share) from lower cost-based services**
10 **that would be reflected in Transource Missouri's FERC revenue requirement. Do**
11 **you agree with his conclusion that the MoPSC should apply the Rule so that**
12 **KCP&L and GMO customers can receive the revenues from such transactions?**

13 A: No. Application of the asymmetrical pricing requirements of the Rule for transactions
14 between Transource and its regulated utility subsidiaries, including Transource Missouri,
15 and the Companies is bad policy. All transactions between these companies are
16 regulated, and at-cost pricing benefits all customers. The asymmetrical pricing that Mr.
17 Kind advocates for transactions between Transource, Transource Missouri, and the
18 Companies would unreasonably benefit Missouri customers by increasing costs for all
19 SPP customers.

20 Such an outcome is inappropriate for two reasons. First, the Rule is not intended
21 to be a profit-generator for KCP&L and GMO customers, particularly when those profits
22 would be generated at the expense of other regulated customers. It is intended to guard
23 against adverse impacts to retail customers, and this is accomplished by assuring that

1 sales of goods and services are at cost. Second, such outcome is bad policy, as it could
2 incite a pricing war with other state commissions similarly seeking to subsidize their
3 local utility customers by increasing costs to all customers paying a regional rate based
4 on their load-ratio share. Appropriate policy should benefit all customers by lowering the
5 overall cost of the Projects through at-cost pricing.

6 Furthermore, the result Mr. Kind assumes would occur if the MoPSC required
7 application of the Rule to such transactions is inaccurate. Indeed, were the MoPSC to
8 apply the Rule to such transactions, Transource Missouri would not purchase services
9 from KCP&L where the market price for those services is higher than cost. Transource
10 Missouri is under no obligation to utilize KCP&L for certain projects in Missouri and
11 elsewhere. Thus, the revenue from asymmetrical pricing that Mr. Kind assumes would
12 flow to the Companies' customers is imaginary. If KCP&L sought to charge Transource
13 Missouri a price above cost, Transource Missouri would purchase those services
14 elsewhere and there would be no above-cost revenues to flow back to customers.

15 **Q: At pages 58-59 of his Rebuttal Testimony, Mr. Hyneman criticizes KCP&L's "track**
16 **record" in complying with the Rule. Do you agree that the examples he provides**
17 **support his statement that KCP&L does not have a very good "track record" in**
18 **complying with the Rule?**

19 **A:** No. KCP&L and GMO have a long-standing and demonstrated history of complying
20 with both the letter and the spirit of the Rule. Mr. Hyneman only provides two examples
21 in an attempt to support his conclusion. The first example (the transaction with Great
22 Plains Power) is one that the Companies previously agreed they were in error for not
23 reporting.

1 Mr. Hyneman’s second example is that in its 2010 rate case, Case No. ER-2010-
2 0356, GMO “significantly inflated the fair market value of the Crossroads Energy
3 Center” and “failed to appropriately apply the Missouri Commission’s Affiliate
4 Transactions Rules to the Crossroads acquisition.” These statements are incorrect and
5 misleading.

6 First and foremost, the Commissions’ valuation of the Crossroads Energy Center
7 (“Crossroads”) is presently on appeal at the Missouri Court of Appeals, Western District
8 in Case No. WD75038, and GMO recently filed a Notice of Appeal with regard to this
9 same issue in its 2012 rate case, Case No. ER-2012-0175. GMO is challenging the
10 findings of the Commission that Mr. Hyneman recites at page 59 of his testimony as not
11 supported by competent and substantial evidence, and not supported by adequate findings
12 of fact.

13 Furthermore, to the extent Mr. Hyneman argues that Aquila, Inc. paid too much
14 for Crossroads when it purchased Crossroads from Aquila Merchant (which occurred
15 before the GPE acquisition), he ignores the fact that this purchase was done using a
16 Request for Proposal (“RFP”) process as specifically allowed and envisioned by the Rule.
17 See 4 CSR 240-20.015(3). In response to the 2007 RFP, Crossroads was offered at net
18 book value for the plant plus transmission costs at over twice the level being incurred. At
19 this offered level, Crossroads was still the least cost option received under the RFP
20 process. After GPE’s July 2008 acquisition of Aquila, Inc., Crossroads was moved from
21 GMO’s business unit to its regulated business unit’s books and records on August 31,
22 2008. In September 2008 GMO filed a rate case that included Crossroads at net book
23 value of \$117 million. Because Crossroads was the least cost option under the RFP when

1 bid in at net book value, because GMO transferred Crossroads to its regulated books at
2 the net book value of \$117 million, and because GMO has routinely sought to include
3 Crossroads in its rate cases at net book value, such transfer meets the letter and the spirit
4 of the Rule.

5 **IV. NTCs and Novation of Projects**

6 **Q: Do you agree with Mr. Hyneman that the NTCs are assets as defined by the**
7 **Financial Accounting Standards Board (“FASB”) in its Statement of Financial**
8 **Accounting Concepts No. 6 (“SFAC 6”)?**

9 A: No. Per paragraph 26 of SFAC 6, “An asset has three essential characteristics: (a) it
10 embodies a probable future benefit that involves a capacity, singly or in combination with
11 other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular
12 entity can obtain the benefit and control others’ access to it, and (c) the transaction or
13 other event giving rise to the entity’s right to or control of the benefit has already
14 occurred.” According to paragraph 168 of SFAC 6, “an item does not qualify as an asset
15 or liability of an entity if it lacks one or more essential characteristics.”

16 **Q: Do KCP&L and GMO control the NTCs?**

17 A: No. SPP has control over the NTCs. SPP alone has the authority to authorize the
18 novation of the NTCs to another qualified transmission owner. Also, SPP retains the
19 authority to revise or withdraw existing NTCs based upon emerging transmission plans
20 and the associated needs for specific projects.

21 **Q: If SPP controls the NTCs, can they be assets of KCP&L and GMO?**

22 A: According to paragraph 168 of SFAC6, they cannot be assets of KCP&L and GMO for
23 accounting purposes because the Companies do not control the NTCs.

1 **Q: Has KCP&L or GMO ever considered the NTCs assets or assigned a value to these**
2 **NTCs for accounting purposes?**

3 A: No.

4 **Q: Was there any value assigned to the NTCs for the Transmission Financial Analysis**
5 **performed by the Applicants that was referenced at page 9 of Mr. Kind's Rebuttal**
6 **Testimony?**

7 A: No. Consistent with KCP&L and GMO's accounting treatment, no value has ever been
8 assigned to the NTCs.

9 **Q: Was Mr. Hyneman correct in asserting in his Rebuttal Testimony that the "two**
10 **NTCs were the consideration GPE gave to AEP to secure GPE's 13.5% interest in**
11 **Transource Missouri"?**

12 A: Absolutely not. His assertion completely mischaracterizes GPE's involvement in
13 Transource and is entirely inconsistent with GPE's obligations under the Transource
14 Operating Agreement. As more fully discussed by Applicant witness Deggendorf in his
15 Surrebuttal Testimony, while the Projects and their timing may have opened the door to
16 discuss partnership opportunities with AEP, GPE is obligated to provide capital for the
17 Projects and will remain obligated to provide ongoing capital toward any future projects
18 according to GPE's 13.5% ownership share in the venture. In other words, GPE receives
19 no windfall from the novation of the Projects to the partnership. There is no free ride.
20 GPE is responsible under the Transource Operating Agreement to fully fund its 13.5%
21 ownership share in the venture.

1 **Q: Do Statements of Financial Accounting Concepts, upon which Mr. Hyneman bases**
2 **his analysis of the NTCs, constitute Generally Accepted Accounting Principles**
3 **(“GAAP”)?**

4 A: No. The FASB states in paragraph 5 at page CON6-4 in the introduction to Statements of
5 Financial Accounting Concepts No. 6, Elements of Financial Statements (“CON 6”) that
6 “Statements of Financial Accounting Concepts do not establish standards prescribing
7 accounting procedures or disclosure practices for particular items or events, which are
8 issued by the Board as Statements of Financial Accounting Standards.” It also declares
9 that “a Statement of Financial Accounting Concepts does not establish generally accepted
10 accounting principles or standards for the disclosure of financial information outside of
11 financial statements in published financial reports.”

12 **Q: Is Mr. Hyneman’s discussion of the asset definition that was formulated at the**
13 **October 20, 2008 joint meeting of the FASB and the International Accounting**
14 **Standards Board (“IASB”) relevant?**

15 A: No. Mr. Hyneman admits that the definition of an asset adopted at that meeting was
16 “tentative.” In fact, the FASB lists the Conceptual Framework project, of which this
17 definition was a part, as an “Inactive Project” on its website with the last update having
18 occurred in November 2010. An inactive project is defined as being “reassessed as lower
19 priority projects.” In addition, this definition and related projects were never adopted by
20 the FASB. It is inappropriate for Mr. Hyneman to apply a non-operational definition to
21 the facts and circumstances of the Applications.

1 **Q: Do you agree with Mr. Stahlman’s claim at page 2 of his Rebuttal Testimony that**
2 **MoPSC approval is required to novate the projects?**

3 A: No. As I indicated in my Direct Testimony, as set forth in Section VI of Attachment O to
4 the SPP Tariff, to assume responsibility for a transmission project identified in an NTC
5 already assigned to a Designated Transmission Owner (“DTO”) (here, KCP&L and
6 GMO), an alternate DTO (here, Transource Missouri) must demonstrate, among other
7 factors, that it has “obtained all state regulatory authority necessary to construct, own,
8 and operate transmission facilities within the state(s) where the project is located.” The
9 demonstration of all state regulatory authority necessary is a requirement for Transource
10 Missouri to receive the Projects as an alternate DTO. However, Section VI of
11 Attachment O to the SPP Tariff also states there is no state regulatory authority or
12 requirement on GMO’s right and ability to “arrange for another entity or another existing
13 Transmission Owner to build and own all or part of the project in its place” meeting the
14 SPP requirements. In addition, while Transource Missouri is pursuing a CCN from the
15 MoPSC to construct, finance, own, operate, and maintain the Projects, I note that the
16 necessity of a CCN is being questioned by Ameren before the Circuit Court of Cole
17 County in Case No. 12AC-CC00499.

18 **Q: Please summarize your Surrebuttal Testimony.**

19 A: The quantitative analysis I have prepared and presented as Schedule DRI-8 illustrates that
20 the approval of the Applications before the MoPSC is in the public interest. When the
21 proper ratemaking assumptions and the appropriate cost allocation method for regional
22 projects are utilized in the quantitative analysis, the results show not a detriment as Mr.
23 Hyneman and Mr. Kind claim, but a benefit to customers if Transource Missouri builds

1 the Projects. Changes in national electric transmission law and policy require ratemaking
2 treatment for regionally cost-allocated transmission investments that is different from the
3 historical cost recovery and revenue sharing for transmission projects built primarily to
4 serve retail load and included in retail rate base.

5 In this testimony, I refute Staff's assertions that the ratemaking approach in
6 Missouri should not acknowledge these changes. I show how Staff's proposed treatment
7 will actually foster improper and inequitable ratemaking in today's environment. If the
8 appropriate ratemaking approach is utilized for these regional Projects, the detrimental
9 customer impact highlighted by MoPSC Staff and OPC disappears. In fact, the Projects
10 built under Transource Missouri have a favorable customer impact due to the various
11 benefits outlined in our Applications, Direct Testimony, and Surrebuttal Testimony. The
12 key reasons for forming Transource further illustrate the benefits to KCP&L and GMO
13 customers.

14 Given this and the support and evidence presented in the Applications and in
15 Direct and Surrebuttal Testimony, KCP&L and GMO reiterate their request that the
16 MoPSC take the following actions:

- 17 (1) Authorize the transfer of certain electric transmission property from the
18 Applicants to Transource Missouri under Section 393.190.1;
- 19 (2) Find that no approval is required under Missouri law to novate the
20 Notifications to Construct received from SPP regarding the two regionally-
21 funded, high-voltage transmission Projects, or otherwise to express no
22 objection to or approve the Applicants' plans in this regard; and

1 (3) Grant a waiver of or variance from the MoPSC's Affiliate Transactions Rule,
2 4 CSR 240-20.015.

3 Additionally, Transource Missouri requests the MoPSC's approval for a line CCN to
4 construct, finance, own, operate, and maintain the Iatan-Nashua Project and the Sibley-
5 Nebraska City Project.

6 **Q: Does this conclude your testimony?**

7 A: Yes, it does.

**BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI**

In the Matter of the Application of)
Transource Missouri, LLC for a Certificate)
of Convenience and Necessity Authorizing it)
to Construct, Finance, Own, Operate, and) Case No. EA-2013-0098
Maintain the Iatan-Nashua and Sibley-)
Nebraska City Electric Transmission)
Projects.)

In the Matter of the Application of Kansas City Power)
& Light Company and KCP&L Greater Missouri)
Operations Company for Approval To Transfer) Case No. EO-2012-0367
Certain Transmission Property to Transource)
Missouri, LLC and for Other Related Determinations.)

AFFIDAVIT OF DARRIN R. IVES

STATE OF MISSOURI)
) ss
COUNTY OF JACKSON)

Darrin R. Ives, being first duly sworn on his oath, states:

1. My name is Darrin R. Ives. I work in Kansas City, Missouri, and I am employed by Kansas City Power & Light Company (“KCP&L”) as Senior Director, Regulatory Affairs.
2. Attached hereto and made a part hereof for all purposes is my Surrebuttal Testimony on behalf of KCP&L and KCP&L Greater Missouri Operations Company consisting of (37) pages, having been prepared in written form for introduction into evidence in the above-captioned docket.

3. I have knowledge of the matters set forth herein. I hereby swear and affirm that my answers contained in the attached testimony to the questions therein propounded, including any attachments thereto, are true and accurate to the best of my knowledge, information and belief.

Darrin R. Ives

Subscribed and sworn before me this 25th day of February, 2013.

Notary Public

KAREN M. SMITH
