I am appealing the decision of Tracy Leonberger, Consumer Services Specialist II:

Complaint C20090057 — Ameren UE. Ms. Leonberger stated she did a comparison for the period of 2006-2008 and is in agreement with the utility company. (See enclosures)

I am totally aware that electric prices tend to increase in the summer, due to supply and demand. Significant factors; weather/condition/efficiency rating of cooling equipment do not pertain to me as I have had the same air conditioning unit in the den one **5000 BTU** since 1990 (it has been sitting on the floor since Fall 2006), it's still in excellent working condition because **there has not been excessive usage**. My **12,500 BTU** in the dining room has served me since it was purchased in 1994; it's in excellent working condition. Why? Because, the **unit has not be used excessively since my daughter's exited my home in 2001 and 2004**. I have a **10,000 BTU** in my bedroom that I purchased in 2005; it **has only been used whenever the temperature exceeded 98°, when I'm home and keeping my grandchildren. I will have wring of sweat around my next and forehead**. As a child of the fifties, I have never been a big fan of air conditioning. I don't even like driving with air conditioning during the summer. The only time my **electric bills may have been excessive would have been 1991-97**. My daughters were still living at home; products of the seventies: they must have air conditioning!

I work full time as a home health aide Monday-Friday from 7 p.m. – 7 a.m. (not every week). I have two, part time jobs during the day that keep me away from home from 8 a.m. until 5 p.m. And when not working nights I don't get home till around 6:30 p.m. I am on a fixed income and live very frugally. ***On the weekends, and at least 2 days out the week I stay at my male companion's home, in the winter to save on my bills, and in the summer to save on my electric bill.***

I do not burn lights in my house all night because I read an article thirty years ago that stated you would give a burglar full access to your whereabouts. A burglar would be stumbling and bumping into furniture/objects in the dark creating noise in unknown territory alerting you that there is an intruder.

I do not sleep with the television on all night. I can not stand to wake up to all that blinking light. I turn on the television as soon as I walk upstairs and set the timer for ninety minutes. Because whatever comes on at 7 p.m., by 7:01 p.m. I am comatose waiting for the program to begin after five-seven commercials.

I do not have a large capacity refrigerator. I have one of those very small college dorm types. I unplugged my gas stove which electronically lights my pilot and use matches, and I use the television for time instead of the clock on the stove so I don't have to use electric.

I telephoned Ameren to request bills for the past five years. I was told by CJ, customer service representative that I need to pay \$35-1st month and \$25 per month-additional bill, totaling \$1000 plus. I explained my gas bill for the entire winter does not exceed that. She then said you can go on-line. I asked her why she didn't say that first instead stating that other nonsense.

I requested that someone come and read my meter. I was under the impression that the service person would check the meter, do a visual of the second floor, and call his people while on the premises to verify that: **Yes the windows on the second floor are all open** (excluding the front) **and that there is no activity coming from the two window units present. This did not occur!** The person just read the meter; a representative did that while I was on the phone. She stated while I was on the telephone that my meter was registering high usage at that moment. I told her that was impossible because all that was running was my small refrigerator, that's it! She told me

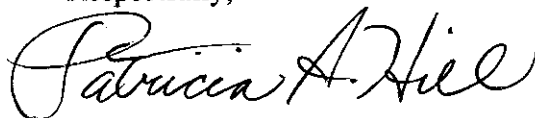

I needed to check to see if anything from the first floor was hooked up to my electric. While she was on the phone I went to the basement and threw the circuit breaker for my unit, hollered upstairs to ask did anything go off. **Nothing stopped running on the first floor.** While I am waiting for my hearing I intend to turn the circuit breakers off for one day for my unit, call Ameren and see if they are still showing activity.

Let it be noted: The air conditioning has been running on the first floor unit non-stop since May, it has not been turned off. They also keep the bathroom light on all day and night, as well as 2-3 televisions 365 days of the year. The bills for June-August were cheaper than the second floor. Why is this?

Let it be noted: I am a child of the early fifties, who was accustomed to air conditioning until the early seventies; I definitely can do without it. And as I have gotten older, I can barely stand it! I can also verify that while working as a school secretary for thirty years that I seldom, if ever turned on the air conditioner in the main office where I was staffed because I couldn't stand that cold air. Arthur, came to visit me at the age of thirty five, I was diagnosed with osteoarthritis, air conditioning makes my joints ache. On one of my jobs I have a small heater by me because I can't stand that cold air.

Let it be noted: I received a second degree burn to the bottom of right foot on June 8, 2008. (enclosures) I was on a walker for a week and walked with a cane for eight weeks. I was totally incapable of climbing twenty five steps to the second floor. My foot became infected which required another two weeks of healing. I was in severe pain for days, it was impossible for me to get up all those steps, so I moved in with my daughter. If I wasn't home, why would I have the air running for three months? I don't have money to just give away! There may have been seven days out of ninety that I consumed any electric for air conditioning purposes. I have been a faithful customer for over thirty years and have often said I was getting stiffed; but what can you do when they are the only utility company. If I used the electric I would be responsible and pay. I did not use the electricity for which I was charged. All of the above is fact!

Respectfully,
