

# Spire Missouri Contingency Planning

## January 3, 2023

### Overview

In compliance with the September 1, 2021 Order Regarding Further Investigation in this matter, Spire Missouri submits this seventh report on its current contingency plans, ongoing contingency plan development, outreach and coordination, and alternative supply efforts.

#### Contingency planning update

On December 15, 2022, the Federal Energy Regulatory Commission reissued the authorizations issued to Spire STL Pipeline LLC in FERC's August 3, 2018 Certificate Order. Specifically, the December 15 Order reissues a permanent certificate of public convenience and necessity to Spire STL Pipeline LLC. Spire Missouri filed the Order in this docket, GO-2022-0022, on December 16, 2022.

Given that a permanent certificate has been reissued to Spire STL Pipeline LLC, implementation of Spire Missouri's contingency plan is not required.

#### Alternate supply update

Given that a permanent certificate has been reissued to Spire STL Pipeline LLC, Spire Missouri no longer requires alternative supplies to replace the Spire STL Pipeline.
