

ATTACHMENT SL - 1

LOOP SPLITTING DIAGRAM

1 - End User Receives voice service from the CLEC using a UNE-L with a port that is terminated in an IDLC / DLC located in the serving Central Office and then translated to the MCI Class 5.

2 - MCI DSL orders a Line splitting Loop. The ILEC completes two jumpers. (A) The line going to the residence is wired to the Voice/Data pair toward MCI DSL. (B) The Voice pair is jumpered to the CLEC Voice Pair.

3 - Voice and Data Run to the Customer's Premises.
