

Policy/Legal Decisions Regarding Demand Response Aggregation

November 20, 2017

The Basics of ARC Participation in MISO

- **An ARC contracts with end-use customers to offer their demand into the markets and registers in MISO as a Demand Response**
 - ARC must verify that their regulator (Relevant Electric Retail Regulatory Authority) allows for ARC participation prior to registering with MISO
 - ARCs register Demand Response as different resource types, representing the capabilities of the asset. From capacity/emergency only (Load Modifying Resource-DR), to full energy and ancillary participation (DRR Type I, II)
- **MISO verifies registration**
- **MISO notifies the registered customers' Load Serving Entity (LSE) and Local Balancing Authority (LBA) of the ARC registration**
 - LSE & LBA have 10 business days for comments, feedback, approval or rejection

The Indiana ARC Participation Model
