

4Th Amendment to WC -2009-0277 Update May 19, 2009

I also wanted to mention that water no longer flows through the church parking lot for days after it rains. This parking lot is several hundred feet from the water main repair at Aspen Woods and Red River.

The Swamp in the neighbors back yard that I complained about originally is just to the west of the church parking lot.

I wonder if MAWC will continue to play the deceptive charades with the church or if they will step up to the plate and be responsible for the damage?

How many times will I have to document a reduction in water flow immediately after a water main repair before we stop playing the "Its not our water" charades? And start being accountable? The incompetence and blatant disregard for my health, life and property from MAWC has become truly inflammatory. How long will they let the water flow out of the ground and into my basement and how much other property will be damaged before they repair the aging water system?

Standing in the same spot and looking to the left just beyond the two storage sheds is the backyard that had the swamp in it.

Water flowing over the sidewalk and out of the seams in the street is just to the right side of the bus.

Pictures show massive damage to the church parking lot from what appears to be many years of underground water intrusion.

Water would flow through this spot for days after it rained just like it did on the street and sidewalk.
