Intervenors.) All citations to Mr. Brubaker's direct testimony refer to his Fuel Adjustment/Rate Design testimony filed on March 7, 2008.

Experimental Low-Income Program

Q. Briefly explain the Experimental Low-Income Program (ELIP.)

A. This experimental program, which began in 2003, provides monthly bill credits of either \$50 or \$20 to customers with household income of 125% of the Federal Poverty Level or less. Participants are required to enroll in Empire's Average Payment plan and, for participants with outstanding arrearages, participants must enter into special pay agreements to pay Empire over a twelve to twenty-four month time period. Since the program started, \$1.4 million has been provided for this program (one half from shareholders, the other half from ratepayers) yet only approximately \$0.5 million has been spent.

Q. Please explain Staff's proposal for the ELIP.

A. Staff's proposal is shown on Schedule 1. Briefly, Staff is proposing continuing ELIP until an evaluation can be conducted by an outside party that did not participate in the development of the program. As of February 2008, there was approximately \$1 million of unspent funding for ELIP in Empire's possession. Since the ratepayers contributed one half of the funding and the shareholders contributed the other half, the Staff's proposal is for one half of the unspent funds be refunded to ratepayers and the other half (shareholder's contribution) be used to fund the program through the Iatan 2 rate case as specified in the Regulatory Plan.

Q. Will the remaining funds be enough to fund the program through the Iatan 2 rate case?

1 A. Absent a tremendous increase in participation, the shareholder's contribution
2 will be more than enough to fund the program and pay for an evaluation of the program. At
3 the time of Iatan 2 case order approving new tariffs, the remaining balance of excess ELIP
4 funds, whether it is a plus or minus, will be taken into account in the demand-side
5 management (DSM) amortization level. For example, if the actual ELIP expenditures during
6 the interim period do not use all of the funds available, future DSM amortization levels would
7 be lowered. Just the opposite would take place if actual ELIP expenditures exceed the
8 program funds available; future DSM amortization levels would increase.

9 Q. What will happen to the ELIP at the end of the Iatan 2 case?

10 A. The program will be discontinued. Depending on the results of the evaluation
11 of ELIP, it may be replaced by a permanent low-income program.

12 Q. Is Empire proposing the same on-going approach to ELIP in its rebuttal
13 testimony?

14 A. It is my understanding that Empire is proposing the same treatment of ELIP
15 funding with the exception of one detail. Staff is recommending that interest be included in
16 the refund to the ratepayers. It is Staff's understanding that Empire, in its rebuttal testimony,
17 will be proposing that the refund not include interest.

18 **Fuel Adjustment Clause**

19 Q. What are the differences among the parties' positions regarding a Fuel
20 Adjustment Clause (FAC) for Empire?

21 A. The parties that filed testimony regarding a FAC (Empire, Staff and the Industrial
22 Intervenors) agree that Empire should be allowed a FAC by the Commission. However, there

1 are differences among the parties regarding what costs and revenues should be flowed through
2 the FAC and the incentive plan portion of the FAC.

3 Q. What is Staff's recommendation regarding which costs and revenues should be
4 flowed through the FAC?

5 A. Staff recommends that variable fuel and purchased power expenses, off-system
6 sales margin, and emission allowance purchases and sales should be flowed through the FAC.
7 Staff recommends that only two Southwest Power Pool (SPP) costs should be flowed through
8 the FAC. The daily SPP energy imbalance market settlements (i.e., the difference between
9 the energy requirements of Empire and the energy supplied by Empire to SPP either through
10 generation or purchased power) are included in purchased power sales and revenues of
11 Empire. The other SPP charge that Staff recommends flow through the FAC is the revenue
12 neutrality uplift charge. This charge reflects the transmission costs of Empire's use of the
13 SPP energy imbalance market.

14 Q. Did Empire include purchased power revenues in its recommendation of what
15 should flow through an Empire FAC?

16 A. Empire did not include off-system sales margin in its proposal. In reference to
17 off-system sales margin, i.e., the net of the revenues and expenses off-system purchases and
18 sales, Empire witness Scott Keith states in his direct testimony: "Empire is not opposed to
19 including 100% of its actual Missouri jurisdictional off-system sales margin as a component
20 of the FAC. Either treatment, base rate or as a component of the FAC, appears to be
21 acceptable under the terms of Empire's approved regulatory plan." (Keith direct p. 26, l. 1-4).
22 In addition, Empire included some fixed costs in its recommendation (response to Industrial
23 Intervenors' Data Request No. 127.)

1 Q. Does Staff recommend that off-system sales margin be included in base rates or
2 as a component of the FAC?

3 A. Staff recommends that a base level of off-system sales margin be included in the
4 FAC base cost to which each six month accumulation period is compared. Off-system sales
5 margin should also be included in the accumulation period costs. The adjustment to the FAC
6 rate in each recovery period would then be based on the difference between what was
7 included in the base and the actual off-system sales margin during the accumulation period.

8 Q. Why is Staff recommending that emission allowance purchases and sales be
9 allowed in the FAC?

10 A. In the last Aquila, Inc. rate case (Case No. ER-2007-0004), in its Order Rejecting
11 Tariff, Granting Clarification, Directing Filing and Correcting Order Nunc Pro Tunc
12 regarding the inclusion of emission allowances in Aquila, Inc.'s FAC, the Commission on
13 page 4 states: "SO₂ emission allowance costs are variable fuel related costs in that they vary
14 based upon the volume of coal used, as well as, the market prices of the allowances
15 themselves." Therefore, Staff recommends emission allowance purchases be included in the
16 FAC. If purchases are included, then Staff recommends that revenues from the sale of
17 emission allowances also be flowed through the FAC.

18 Q. What are Empire's and the Industrial Intervenors' positions regarding emission
19 allowance purchases and sales?

20 A. Empire witness Blake Mertens states in his direct testimony:

21 Empire is including the cost related to emissions allowances in its fuel
22 adjustment request at this time. Currently Empire projects that we will have
23 sufficient SO₂ allowances granted to us by the EPA or in our existing
24 inventory to supply our needs through about 2012 so the inclusion of FERC
25 account 509 in the FAC is not expected to have any impact until that time.
26

(Mertens direct, p. 19, l. 7-11)

When asked in Staff Data Request No. 191 about Empire's position regarding emission allowance sales, Mr. Scott Keith replied:

Empire is not opposed to reflecting the revenue from the sale of emission allowances in the FAC. The proposed tariff only reflected the costs in FERC account 509, but the proposed tariff can be clarified to make it clear that the emission costs reflected in the FAC are net of any revenue associated with the sale of emission allowances.

Industrial Intervenors witness Mr. Brubaker recommends that SO₂ allowance costs not be included in the FAC. (Brubaker direct, p. 18, l. 21-23).

Q. How does the FAC incentive plan that Staff recommends in its COS report differ from the FAC incentive plan proposed by Empire?

A. The basic principle of the incentive plans are the same: Empire should be held responsible (i.e., over/under recovery) for a percentage of the adjustment to the base fuel rate. The difference between Empire's incentive plan and Staff's is the percentage factor that would be Empire's responsibility. Empire recommended that ninety-five percent (95%) of the total adjustment be billed/credited to the ratepayers. This would mean that Empire would retain five percent (5%) of any decrease in energy costs for an accumulation period or absorb five percent (5%) of any increase in energy costs for an accumulation period. Empire based its recommendation on the FAC authorized by the Commission in the last Aquila, Inc. rate increase case (Case No. ER-2007-0004.) (Keith direct, p. 29, l. 4-5).

Based on Staff's analysis, as described in Staff COS Report on pages 61 through 63, it is Staff's position that the five percent (5%) level gives Empire very little serious incentive to manage its fuel costs efficiently. Staff's analysis respecting Empire's estimated fuel and purchased power costs showed that over the four year time period of 2003 through 2006,

1 Empire absorbed approximately \$85.5 million (over sixty percent (60%)) of the total increase
2 in fuel costs of \$139 million. During that time, Empire had great incentive to reduce its fuel
3 costs as much as possible.

4 Given the estimate that Empire absorbed over sixty percent (60%) of an increase in
5 fuel and purchased power costs between 2003 and 2006, Staff believes that requiring Empire
6 to absorb/retain a percentage of the change in the FAC in the range of twenty to forty percent
7 (20% - 40%) would result in a much greater incentive for Empire to manage the costs
8 included in its FAC while greatly reducing the risk of Empire having to absorb increased fuel
9 costs. At twenty percent (20%), Empire would have less risk and Empire's ratepayers would
10 be absorbing/retaining more of the costs. At 40%, Empire's risk would be greater and the
11 ratepayers would be absorbing/retaining less of the costs. Staff recommends that the
12 percentage be set at the mid-point of this range – thirty percent (30%).

13 Staff's proposal gives Empire a great incentive to reduce its fuel and purchased power
14 costs below the base rate. With Staff's recommendation, Empire can keep thirty (30) cents of
15 every dollar that it does not spend.

16 Q. How does the Staff's incentive plan differ from the incentive plan proposed by
17 the Industrial Intervenors witness Mr. Brubaker?

18 A. The incentive plan proposed by Mr. Brubaker is much more complicated than that
19 of the Staff or Empire's. It requires the calculation of a dead-band (plus or minus one percent
20 (1%) of total fuel costs) around the FAC base rate within which Empire is responsible for all
21 of the increased costs, but also retains all of the savings. In addition, there are two bands of
22 approximately five percent (5%) each within which the amount absorbed/retained by Empire

1 changes. Outside of these bands (greater than eleven percent (11%) change), the customers
2 absorb/retain all of the costs/savings. (Brubaker direct, p. 8).

3 This proposal greatly benefits the customers if fuel and purchased power costs fall.
4 All savings greater than eleven percent (11%) are credited back to the ratepayers. However, it
5 gives Empire no incentive to reduce costs more than eleven percent (11%). At that point on,
6 Empire retains none of the savings.

7 On the other hand, Mr. Brubaker's proposal greatly benefits Empire if the costs
8 flowing through the FAC increase more than eleven percent (11%). Once the cost increase is
9 greater than eleven percent (11%), Empire recovers all costs from the rate payers. Therefore,
10 once costs increase more than eleven percent (11%), Empire will have no incentive to manage
11 its costs since all of the costs will be passed on to the ratepayers.

12 Staff analyzed Mr. Brubaker's proposal using the estimated fuel and purchased power
13 costs it used in the analysis shown in Staff's COS report. Over the 2003 through 2006 time
14 period modeled, fuel and purchased power costs increased by more than eleven percent (11%)
15 every year. When applying Mr. Brubaker's methodology to these estimates, the ratepayers
16 would absorb approximately ninety-one percent (91%) of the increase in costs while Empire
17 absorbed only nine percent (9%) of the increase.

18 Q. On page 11 of his direct testimony, doesn't Mr. Brubaker explain that his
19 methodology is based on the capital structure and not the percentages given on page 8?

20 A. Yes, he does. Matt Barnes is the Staff witness on capital structure so, in my
21 analysis, I used the sharing percentages that Mr. Brubaker gave on page 8 of his direct
22 testimony. It really does not matter exactly how wide each band is. What is important is that
23 with Mr. Brubaker's proposal, Empire is allowed to recover one hundred percent (100%) of

Rebuttal Testimony of
Lena M. Mantle

1 | its costs above a level that it has easily reached in the recent past. Mr. Brubaker's proposal
2 | provides very little "incentive" in his incentive mechanism.

3 | Q. Does this conclude your rebuttal testimony?

4 | A. Yes, it does.

Experimental Low-Income Program Proposal

To become effective on the effective date of the new rates coming out of the current rate case (ER-2008-0093)

1. One half of the balance of the unspent ELIP funds, including interest, will be refunded to the customers as a one time credit to customer bill during one billing month based on the usage of the customers in the April billing month. As of February 2008, this amount is approximately \$470,000.
2. ELIP costs recovery will be set at zero in the Missouri jurisdictional cost of service, and shareholder funding of the ELIP will be set at zero. The shareholder's excess funds will be used to support the ELIP expenditures until the new rates are implemented in the Iatan 2 rate case as specified in the Regulatory Plan Stipulation And Agreement, Case No. EO-2005-0263 (Iatan 2 case.)
3. An evaluation of the ELIP will be completed prior to the filing of the Iatan 2 case with the cost of the evaluation paid using excess ELIP shareholder funds. The evaluation will not be completed by anyone who helped design ELIP.
4. In the Iatan 2 case, the parties will propose either a permanent program based on the evaluation of ELIP or the discontinuance of a low-income payment program.
5. At the time of Iatan 2 case order approving new tariffs, the remaining balance of excess ELIP funds, whether it is a plus or minus, will be taken into account in the DSM amortization level. For example, if the actual ELIP expenditures during the interim period do not use all of the funds available, future DSM amortization levels would be lowered. Just the opposite would take place if actual ELIP expenditures exceed the program funds available, future DSM amortization levels would increase. Remaining balance of excess ELIP funds (shareholder portion) will become an offset to the CPC regulatory asset balance at the end of the Iatan 2 rate case.
