

NANCY L DENOYER, ARNOLD, MO.

Nearly 650,000 homes and businesses in eastern Missouri rely on reliable, affordable natural gas from Spire STL Pipeline to fuel their lives.

The current, short-term certificate issued by the Federal Energy Regulatory Commission (FERC) will expire Dec. 13, 2021.

Natural gas is incredibly reliable and outages are rare. But without the STL Pipeline in service, delivering critical energy to St. Louis homes and businesses, the potential for service disruptions and outages is real.

I have a 98 year old living with me, and my husband is a disabled veteran and we are retired and on a fixed income. Please do not interrupt our gas. This could be deadly for our family. Please, please extend our services. The air is clean and I hate that they continue to scare everyone about climate change. Just another way to change America. Any why are we paying Russia for energy, this makes no sense.

Please, let's put America first and let's care about the people that live here.
