REBUTTAL OF SUPPLEMENTAL TESTIMONY

OF

DAVID MURRAY

MISSOURI-AMERICAN WATER COMPANY

CASE NO. WR-2015-0301

Jefferson City, Missouri February 2016

1		REBUTTAL OF SUPPLEMENTAL TESTIMONY	
2		OF	
3		DAVID MURRAY	
4		MISSOURI-AMERICAN WATER COMPANY	
5		CASE NO. WR-2015-0301	
6	Q.	Please state your name.	
7	А.	My name is David Murray.	
8	Q.	Are you the same David Murray who prepared the Rate of Return Section of	
9	the Staff's Cost of Service Report and rebuttal testimony in this case?		
10	А.	Yes, I am.	
11	Q.	What is the purpose of this testimony?	
12	А.	The purpose of this testimony is to respond to Scott W. Rungren's	
13	Supplemental Testimony filed on February 10, 2016.		
14	Q.	Do you and Mr. Rungren agree that there have been no specific studies on the	
15	impact an alternative rate design may have on a water utility company's cost of capital?		
16	А.	Yes. Mr. Rungren correctly indicates that both he and Staff are not aware of	
17	any specific studies quantifying the impact of alternative rate making mechanisms on water		
18	utilities' cost of common equity.		
19	Q.	Does Mr. Rungren believe any consideration should be given to the allowed	
20	ROE if an alternative rate design is implemented?		
21	А.	No.	
22	Q.	Why?	

Rebuttal of Supplemental Testimony of David Murray

A. Mr. Rungren seems to defer to Missouri-American Water Company's
 (MAWC) Rate of Return Witness, Roger A. Morin, on the issue of whether an adjustment
 should be made to the allowed ROE to consider an alternative ratemaking mechanism that
 stabilizes revenues. Staff addressed Dr. Morin's position in its rebuttal testimony in this case.

5

Q. What is the main issue Staff had with Dr. Morin's position?

6 A. Dr. Morin's testimony as it relates to an adjustment to the allowed ROE 7 contradicts the methodologies he uses to estimate the base allowed ROE, which has a much 8 bigger impact on a fair and reasonable revenue requirement. Dr. Morin justifies his use of 9 arithmetic averages to estimate the cost of equity by emphasizing that investors are very 10 much focused on the annual volatility in earnings when determining a required return. 11 However, when considering a ratemaking mechanism that would reduce this annual 12 volatility, he explains away any consideration by indicating that he has already considered 13 this through his selection of comparable companies that have other mechanisms that reduce 14 volatility of earnings.

Q. Mr. Rungren indicates that because there have not been any significant studies on the impacts of alternative rate designs on water utilities, the "Commission should continue to look to the capital markets to inform them of a utility's cost of capital and evaluate the impact of a Revenue Stabilization Mechanism in the utility's subsequent rate case using a comparable group of utilities." Is this practical?

A. No. Because MAWC is not a stand-alone entity with debt securities at least traded over the counter, it is impossible to observe any changes in the prices of MAWC's capital. Any changes to MAWC's regulatory rate mechanisms would have a fairly small impact on American Water's overall business risk. The only way the impact of any such

Rebuttal of Supplemental Testimony of David Murray

mechanism on a utility's cost of capital could possibly be measured is if it were applied to all
 of American Water's subsidiaries, which won't happen. Even then, it would still be a matter
 of judgement.

4 Q. Can this be done by selecting a comparable group of companies that have the5 same mechanism?

6 A. No. As Staff stated in the report it filed on June 16, 2015, the number of 7 publicly-traded water utility companies is already very small for purposes of estimating a 8 generic cost of equity for the industry. Therefore, it is next to impossible to find a sufficient 9 size of sample companies that can be controlled for rate mechanisms similar to that which 10 MAWC is proposing. Additionally, most often these companies will have several 11 subsidiaries with varying rate mechanisms that also make it impossible to isolate for this one 12 specific proposal.

Q. What did Staff propose to do in its rebuttal testimony in this case to considerany potential mechanisms that may reduce earnings volatility?

15 A. Staff recognized that rating agencies would view such a mechanism favorably when assessing MAWC's business risk. However, as Staff discussed extensively in its direct 16 17 and rebuttal testimony in this case, MAWC is not viewed as a stand-alone company. 18 Therefore, rating agencies do not publish any analysis specific to MAWC. Consequently, 19 Staff assumed from a hypothetical perspective that such a mechanism may support a one 20 notch improvement to MAWC's credit rating (the smallest improvement possible), if it were 21 rated on a stand-alone basis. Because debt costs are tangible and identifiable, Staff believed 22 this was a reasonable way to give some consideration to the risk-reducing impact of the 23 proposed Revenue Stabilization Mechanism.

Rebuttal of Supplemental Testimony of David Murray

Q. How has Staff approached the introduction of these type of rate mechanisms
 in the past?

- 3 A. As Staff stated in its report, in two 2006 gas rate cases (Case Nos. 4 GR-2006-0387 and GR-2006-0422), Staff simply suggested the Commission authorize an 5 ROE in the lower half of its range to give this consideration. In a subsequent gas rate case 6 for MGE, Case No. GR-2009-0355, Staff recommended the Commission authorize an 7 allowed ROE in the lower half of Staff's range. In support of its recommendation, Staff cited 8 comments from a Goldman Sachs' report that indicated a 40 basis point lower allowed ROE 9 in return for a straight-fixed variable rate design was supportive of Atmos Energy Corp.'s 10 stock price.
- 11

Q.

Is either approach acceptable?

A. Yes. Because any adjustment is very much a matter of judgment, either
approach is acceptable. Staff chose to use the credit rating adjustment approach in this case
because it uses quantifiable and objective debt cost differences as a proxy for cost of equity
differences. Additionally, in the past when a subject company's credit rating (The Empire
District Electric Company) differed from the average of the proxy group, Staff has
recommended debt cost differentials be used as a proxy for a cost of equity adjustment.

18 Q. Does this conclude your Rebuttal Testimony to MAWC's Supplemental19 Testimony?

20

A. Yes, it does.
