

Exhibit No.:

Issues: Revenue,
Uncollectible Expense,
Gross Receipts Tax,
Territorial Agreements,
Allocations, Payroll,
Incentive Compensation,
Payroll Taxes,
Injuries and Damages,
Depreciation

Witness: DOYLE L. GIBBS

Sponsoring Party: MoPSC Staff

Type of Exhibit: Direct Testimony

Case No.: EC-2002-1

Date Testimony Prepared: March 1, 2002

6 **CASE NO EC-2002-1**

7 Q. Please state your name and business address.

8 A. Doyle L. Gibbs, 815 Charter Commons Drive, Suite 100B, Chesterfield,
9 Missouri 63017.

10 Q. By whom are you employed and in what capacity?

11 A. I am employed by the Missouri Public Service Commission (Commission) as
12 a Regulatory Auditor.

13 Q. Please describe your educational background.

14 A. I attended the University of Missouri – St. Louis, where I received a Bachelor
15 of Science degree in Business Administration with a major in Accounting in 1976. I passed
16 the Uniform Certified Public Accountant examination in 1988. I have been licensed as a
17 Certified Public Accountant in the state of Missouri since February 1989.

18 Q. What has been the nature of your duties while in the employ of this
19 Commission?

20 A. I have conducted and assisted with the audits and examinations of the books
21 and records of utility companies operating within the state of Missouri.

22 Q. Have you previously filed testimony before the Commission?

Direct Testimony of
Doyle L. Gibbs

1 A. Yes, I have. Please refer to Schedule 1, attached to this direct testimony, for a
2 list of cases in which I have previously filed testimony.

3 Q. With reference to Case No. EC-2002-1, have you made an investigation of the
4 books and records of Union Electric Company, d/b/a AmerenUE (UE or Company)?

5 A. Yes, with the assistance of other members of the Commission Staff (Staff).

6 Q. Have you previously filed direct testimony in this case?

7 A. Yes, I have.

8 Q. Please identify the principal areas of responsibility you sponsored in your
9 previous direct testimony.

10 A. My principal areas of responsibility in previously filed direct testimony in this
11 case were revenue, uncollectible expense, Gross Receipts Tax (GRT) and Territorial
12 Agreements.

13 Q. Are you still responsible for these areas in the current filing?

14 A. Yes, I am. For the current filing, I have also assumed responsibility for the
15 Accounting Schedules, allocations, payroll, incentive compensation, payroll taxes, injuries
16 and damages and depreciation and amortization expense.

17 Q. For those areas you sponsored in the previous filing, is the treatment
18 substantially the same in the current filing?

19 A. Yes, it is. However, because of data that was received very recently from UE
20 respecting territorial agreements, the Staff, due to time restraints, has not been able to
21 properly analyze the data. This data is still under review.

22 Q. Please identify the Accounting Schedules and adjustments you are sponsoring.

23 A. I am sponsoring the following Accounting Schedules:

Direct Testimony of
Doyle L. Gibbs

1 Accounting Schedule 1 Revenue Requirement

2 Accounting Schedule 2 Rate Base

3 Accounting Schedule 5 Depreciation

4 Accounting Schedule 9 Income Statement

5 Accounting Schedule 10 Adjustments To Income Statement

6 I am sponsoring adjustments to plant in service, depreciation reserve and the income
7 statement which are identified as follows:

8 Adjustments To Plant In Service – Accounting Schedule 4

9 Assignment of plant to Sales For Resale P-51.1

10 Territorial Agreements P-51.2

11 Allocation to gas operations P-52.1, P-53.1, P-54.1, P-57.1,
12 P-58.1, P-59.1 and P-62.1

13 Adjustments To Depreciation Reserve – Accounting Schedule 7

14 Territorial Agreements R-50.1

15 Allocation to gas operations R-52.1, R-53.1, R-56.1, R-57.1,
16 R-58.1 and R-61.1

17 Adjustments To Income Statement – Accounting Schedule 10

18 Revenue S-1.1, S-1.2, S-1.3, S-1.4, S-1.5,
19 S-1.6, S-1.7, S-1.8, S-2.1, S-3.1, S-4.1
20 and S-4.2

21 Payroll S-6.2, S-10.1, S-11.1, S-12.1, S-13.1,
22 S-14.1, S-15.1, S-16.1 and S-17.1

23 Incentive compensation S-6.3, S-10.2, S-11.2, S-12.2, S-13.2,
24 S-14.2, S-15.2, S-16.2 and S-17.2

25 Territorial Agreements (expense) S-12.3

26 Uncollectible expense S-13.4

27 Injuries and damages S-17.14

Direct Testimony of
Doyle L. Gibbs

1	Employee benefits	S-17.15
2	Depreciation and Amortization	S-18.1, S-18.2, S-19.1, S-20.1,
3		S-21.1, S-21.2, S-22.1 and S-23.1
4	Gross Receipts Tax	S-29.1
5	Payroll related tax	S-32.3 and S-32.4

6 **ACCOUNTING SCHEDULES**

7 Q. Please explain Accounting Schedule 1, Revenue Requirement.

8 A. Accounting Schedule 1 is the calculation of revenue requirement for the rate
9 of return range sponsored by Staff witness Ronald L. Bible of the Commission's Financial
10 Analysis Department. The rates of return determined by Staff witness Bible are applied to
11 the Company's rate base, which is presented on Accounting Schedule 2, Rate Base, to
12 determine the net income requirement. The gross revenue requirement is then determined by
13 adding the required income taxes, calculated on Accounting Schedule 11, Income Tax, to the
14 net income requirement. The direct testimony of Staff Accounting witness Stephen M.
15 Rackers explains the calculation of income taxes on Accounting Schedule 11.

16 Q. Please explain Accounting Schedule 2, Rate Base.

17 A. Accounting Schedule 2 summarizes the Company's jurisdictional investment,
18 net of ratepayer-supplied funds, that is used in Accounting Schedule 1 to calculate revenue
19 requirement. For all the items that make up the jurisdictional rate base that are not supported
20 by an accompanying accounting schedule, the total electric amounts and the applicable
21 allocation factor used to get to the jurisdictional amount have been presented. The absence
22 of an allocation factor would indicate the amount was determined based on a direct
23 assignment.

24 Q. What is meant by direct assignment?

Direct Testimony of
Doyle L. Gibbs

1 A. Direct assignment reflects investment, revenue or expense that has been
2 identified by UE that are specific to its Missouri jurisdiction.

3 Q. Were you responsible for the determination of any of the amounts presented
4 on Accounting Schedule 2, Rate Base?

5 A. I did not determine any of the amounts in total. I did, however, determine the
6 distribution of the total deferred income tax balance, sponsored by Staff witness Rackers, to
7 the various categories listed on Accounting Schedule 2 for purposes of applying the
8 appropriate allocation factor to arrive at the Missouri jurisdictional amount.

9 Q. How did you determine the distribution of the deferred tax balances to the
10 categories for allocation purposes?

11 A. The amount for each of the categories was determined by using the
12 Company's distribution of deferred tax balances for the year-ending June 30, 2001, included
13 in the work papers provided to the Staff in support of the Company's filing for the sixth
14 sharing credit period, i.e., the third year of the second experimental alternative regulation
15 plan (EARP), in Case EM-96-149, which corresponds to the historical test year used for this
16 filing. The Company's distribution of the deferred tax balance relied in part, on deferred tax
17 balances as of December 31, 2000.

18 Q. Please explain Accounting Schedule 5 - Depreciation.

19 A. Accounting Schedule 5, Depreciation, calculates the Missouri jurisdictional
20 depreciation expense by applying the Staff's proposed depreciation rates to the adjusted plant
21 balances, as allocated to Missouri, found in column (H) on Accounting Schedule 3. Please
22 refer to the direct testimony of Staff witness Jolie Mathis of the Commission's Engineering
23 & Management Services Department for further information regarding the development of

Direct Testimony of
Doyle L. Gibbs

1 the Staff's proposed depreciation rates. The annual depreciation resulting from this
2 calculation is compared to the test year recorded depreciation expense, as allocated to
3 Missouri, to determine Adjustments S-18.1, S-19.1, S-20.1 and S-22.1 on Accounting
4 Schedule 10, Adjustments To Income Statement.

5 Q. Please explain Accounting Schedule 9.

6 A. Accounting Schedule 9, Income Statement, lists in Column B the Company's
7 electric operating revenues and expenses, as described in Column A, for the twelve months
8 ended June 30, 2001. Columns C and E contain Staff's adjustments to total electric and
9 jurisdictional electric operating revenues and expenses, respectively. Column D contains the
10 Missouri jurisdictional allocation factors. Column F is the Staff's adjusted jurisdictional
11 electric operating revenues and expenses.

12 Q. Do the revenues and expenses listed in Column B for the twelve months
13 ended June 30, 2001 reflect a total electric income statement?

14 A. No, it does not. Certain revenues and expenses are directly assignable and
15 recorded by UE on a jurisdictional basis. The revenues and expenses that have been directly
16 assigned and recorded on the books of the Company to jurisdictions other than Missouri have
17 been omitted from Column B. The absence of the directly assigned non-Missouri
18 jurisdictional revenues and expenses from Column B, for presentation purposes, have no
19 impact on the amounts ultimately reflected in Column G, the adjusted Missouri jurisdictional
20 income statement. All the revenue and expense categories listed in Column A that are
21 specifically identified as Missouri represent the categories that have corresponding directly
22 assigned non-jurisdictional amounts that have been omitted from Column B.

23 Q. Please explain Accounting Schedule 10.

Direct Testimony of
Doyle L. Gibbs

1 A. Accounting Schedule 10, Adjustments to Income Statement, lists the Staff's
2 individual total electric and Missouri jurisdictional adjustments to the test year recorded
3 income statement to derive Staff's adjusted net income, and are shown in Columns C and E
4 of Accounting Schedule 9, respectively. The jurisdictional adjustments presented under the
5 column titled "Mo Juris Adjustment" reflect the adjustments determined on a basis of direct
6 assignment to Missouri. A brief explanation for each adjustment and the name of the Staff
7 witness sponsoring the adjustment is included on Accounting Schedule 10.

8 Q. Were you responsible for any of the amounts contained in any of the
9 Accounting Schedules you are not sponsoring?

10 A. Yes. As previously mentioned, I determined the distribution of the total
11 deferred income tax balance included in rate base. I am also responsible for the amounts of
12 payroll expense, payroll related taxes and revenue related taxes included in the determination
13 of Cash Working Capital calculated on Accounting Schedule 8.

14 **ALLOCATIONS**

15 Q. Please describe the purpose of the allocation process.

16 A. Because UE operates in jurisdictions other than Missouri retail, it is necessary
17 to develop allocation factors so that the appropriate Missouri retail jurisdictional level of net
18 investment and operating expenses can be determined. Tariffs are then designed to recover
19 the Missouri jurisdictional operating expenses and provide a reasonable rate of return on the
20 Missouri jurisdictional investment that are dedicated to the provision of service to Missouri
21 retail customers.

22 Q. What are the allocation factors that are being used by the Staff in this case?

Direct Testimony of
Doyle L. Gibbs

1 A. For the most part, Staff is using allocation factors that have been calculated by
2 the Staff using data for the 12 months ending September 30, 2001, the update period for this
3 filing. The one exception is the variable allocation factor that was calculated using weather-
4 normalized data for the test year ending June 30, 2001. Schedule 2, attached to my direct
5 testimony, is a list of the various allocation factors that have been calculated by the Staff.

6 Q. Is the methodology used by the Staff to calculate the allocation factors the
7 same as that used by the Company?

8 A. The methodology used by the Staff is generally the same as that used by the
9 Company in recent filings presented before this Commission. However, the final allocation
10 factors developed by the Staff may be different as a result of conceptual differences or
11 adjustments affecting the input data.

12 **Fixed Allocation Factor**

13 Q. Referring to Schedule 2 attached to your testimony, what is the fixed
14 allocation factor and how was it calculated?

15 A. The fixed allocation factor, sometimes referred to as the demand allocation
16 factor, is used to allocate most of the power plants, transmission plant, and the expenses
17 associated with those facilities. Additionally, the fixed allocation factor has a direct impact
18 in the development of all the remaining allocation factors, with the exception of the
19 “variable”, “total distribution plant” and “Missouri distribution plant” factors. Staff witness
20 Alan J. Bax of the Commission’s Energy Department calculated the fixed allocation factor,
21 which he refers to as the demand allocation factor. Please refer to his direct testimony for
22 information regarding the development of Staff’s fixed (demand) allocation factor.

Variable Allocation Factor

Q. Please explain the development of the variable allocation factor.

A. The variable allocation factor represents the ratio of Missouri kilowatt hour (kWh) usage to total UE kWh usage and is used to allocate expenses that vary with output. The variable allocation factor is sometimes referred to as the energy allocation factor and was calculated by Staff witness Bax. Please refer to his direct testimony for information regarding the development of Staff's variable allocation factor.

Callaway Post Operational Factor

Q. Please describe the calculation of the Callaway post operational jurisdictional factor.

A. The Callaway post operational jurisdictional factor is simply the fixed allocation factor reflecting the elimination of the Illinois component from the calculation, i.e., the factor is based on the loads at time of peak of just the Missouri retail and Missouri Wholesale jurisdictions instead of total UE. The determination of this allocation factor is necessary due to the write-off of the Callaway post operational costs related to Illinois.

Nuclear Allocation Factor

Q. Please explain the development of the nuclear allocation factor.

A. The nuclear allocation factor is a composite factor based on the allocation of the average nuclear plant in service for the year ending September 30, 2001, including past Commission ordered nuclear plant disallowances, at the fixed allocation factor and the direct assignment of the total nuclear plant disallowances.

Q. Why does this calculation create an allocation factor greater than the fixed allocation factor?

1 A. The Missouri jurisdictional nuclear plant disallowance was established in
2 Case Nos. EO-88-17 and ER-85-160. The Missouri jurisdictional "direct assignment" of the
3 nuclear plant disallowance was, and is, approximately 88 percent of the total disallowance.
4 As long as the fixed allocation factor exceeds 88 percent, Missouri will be allocated a greater
5 portion of the nuclear plant that is represented by the amount disallowed without a
6 corresponding proportion of the disallowance as an offset.

7 **Distribution Plant Factors**

8 Q. Please describe the calculations to determine the allocation factors related to
9 distribution plant.

10 A. The allocation factors related to distribution plant are based on direct
11 assignment. The average distribution plant located in Missouri for the year ending
12 September 30, 2001, reduced for the direct assignment identified by UE to serve Sales For
13 Resale (SFR) customers, divided by the total average distribution plant located in Missouri is
14 the calculation for the Missouri distribution plant jurisdiction factor presented on Schedule 2
15 attached to my direct testimony. The Missouri jurisdictional component of the total
16 distribution plant allocation factor was determined by dividing the Missouri jurisdictional
17 distribution plant, previously discussed, by the total UE average distribution plant for the
18 year ending September 30, 2001.

19 Q. How is the assignment of Missouri distribution plant to SFR reflected in the
20 Accounting Schedules?

21 A. The Missouri distribution plant assigned to SFR appears as Adjustment P-51.1
22 on Accounting Schedule 4. Because the Missouri plant assignment to SFR is incorporated in
23 the determination of the Missouri distribution plant factor, which is applied to the Missouri

1 distribution plant depreciation reserve, there is no need to make a corresponding adjustment
2 to the depreciation reserve related to SFR.

3 **Labor Factor**

4 Q. Please describe how the labor allocation factor was determined.

5 A. The Missouri jurisdictional labor factor is a composite factor that results from
6 the application of the fixed, variable, and the Missouri distribution plant factors to electric
7 O&M labor expenses if they cannot be directly assigned. In response to a Staff data request,
8 UE provided the actual electric operations and maintenance (O&M) labor expense for the
9 year ending September 30, 2001. The Company response also provided the distribution of
10 the total electric O&M to the various functions necessary for the application of the
11 aforementioned allocation factors to determine the Missouri jurisdictional amount. The
12 Missouri jurisdictional labor allocation factor is the ratio of the Missouri jurisdictional labor,
13 determined through the application of the appropriate allocation factors and direct
14 assignment, to total electric O&M labor.

15 **Net Plant Factor**

16 Q. Please explain the how the net plant factor was determined.

17 A. The Missouri jurisdictional net plant factor was determined by dividing the
18 net plant, as allocated to Missouri, by the total electric net plant. The determination of the
19 Missouri jurisdictional net plant utilized the fixed, Callaway post operational, Missouri
20 distribution plant and labor factors previously discussed, as well as, direct assignment and the
21 elimination of certain common facilities allocated to gas operations. The allocation of
22 common facilities to gas operations is based on an electric to gas labor factor developed by

1 the Company in a year-end December 2000 study. The Staff has incorporated the results of
2 this study for the determination of the common facilities allocated to gas operations.

3 Q. Did the allocation of common facilities in the allocation process result in any
4 adjustments being made by the Staff in the Accounting Schedules?

5 A. Yes. Adjustments P-51.1, P-52.1, P-53.1, P-56.1, P-57.1, P-58.1 and P-61.1
6 on Accounting Schedule 4 reflects the allocation of common general plant facilities to gas
7 operations based on the Company year-end December 2000 study previously referenced.
8 Corresponding adjustments were made to reflect the associated depreciation reserve as of
9 September 30, 2001 in Accounting Schedule 7 – Adjustments To Depreciation Reserve. The
10 adjustments to depreciation reserve are identified as R-52.1, R-53.1, R-56.1, R-57.1, R-58.1
11 and R-61.1.

12 **Operating Expenses**

13 Q. Please explain the development of the operating expense allocation factor.

14 A. The operating expense allocation factor reflects the allocated electric O&M
15 expenses for the year ending September 30, 2001 and is a composite that incorporates the use
16 of the fixed, variable, Missouri distribution plant and labor factors, and direct assignment. It
17 was calculated in the same manner used to develop the labor allocation factor but includes
18 the non-labor expense in addition to labor expense

19 **General Materials and Supplies**

20 Q. How was the allocation for general material and supplies calculated?

21 A. Like most of the allocations, this too, is a composite and reflects the use of the
22 fixed and variable allocation factors and direct assignment. Similar to the discussion
23 regarding the deferred income tax balances in rate base, the average materials and supplies

1 balance for the year ending June 30, 2001 included in the work papers supporting UE's filing
2 for the sixth sharing credit period, was the basis for distributing the materials and supplies
3 balance to the allocable categories to which the appropriate allocation factors were applied.
4 The resulting Missouri jurisdictional allocation factor was applied to the total average general
5 materials and supplies balance determined by Staff Accounting witness Paul R. Harrison.

6 **ITC Amortization**

7 Q. Please explain the factor for the allocation of Investment Tax Credit (ITC)
8 amortization.

9 A. The allocation factor for ITC amortization is a composite allocation factor
10 reflecting the direct assignment and application of the fixed, total distribution plant and labor
11 allocation factors to the ITC amortization, as distributed to allocable categories in the work
12 papers supporting UE's filing for the third sharing period of the second EARP.

13 **REVENUE**

14 **Rate Revenue**

15 Q. Please identify the adjustments you are sponsoring to rate revenue.

16 A. The adjustments to rate revenue include Adjustment S-1.1 to adjust
17 as-billed revenue to correct the test year amount for out-of-period postings and customer load
18 reductions. Adjustment S-1.2 adjusts the test year revenue to reflect normal weather.
19 Adjustment S-1.3 restates revenue to the level it would have been, absent the territorial
20 agreements. All the adjustments related to the territorial agreements will be discussed later
21 in this testimony. Adjustment S-1.4 adjusts the test year revenue so that all revenue-billing
22 cycles reflect a 365-day year. Adjustment S-1.5 adjusts revenue to reflect the growth in
23 customers through the end of the Staff's update period ending September 30, 2001.

Direct Testimony of
Doyle L. Gibbs

1 Adjustment S-1.6 eliminates the GRT included in test year billed revenue. Adjustment S-1.7
2 eliminates the unbilled revenue recorded on the books during the test year. Adjustment S-1.8
3 reflects the impact on revenue for customers that switched to a different rate tariff during the
4 test year.

5 Q. Is another Staff member responsible for the calculation of any of the
6 adjustments to rate revenue that you are sponsoring?

7 A. Yes. Staff witness Janice M. Pyatte from the Energy Department calculated
8 Adjustment S-1.1 for miscellaneous adjustments to as billed revenue, Adjustment S-1.2 to
9 reflect normal weather, Adjustment S-1.4 to include a 365-day period and Adjustment S-1.8
10 for the effect of rate switching. Please refer to the direct testimony of Staff witness Pyatte for
11 more information regarding these adjustments.

12 Q. How was the revenue adjustment S-1.5 for growth calculated?

13 A. A growth adjustment was calculated for the residential, small general service,
14 large general service and small primary service tariff rate classes. For each of these classes,
15 the average number of customers for each month of the test year was subtracted from the
16 number of customers at the end of the update period, September 30, 2001. The difference
17 between the numbers of customers at the end of the update period, compared to the monthly
18 average each month, was multiplied by the corresponding normalized monthly revenue per
19 customer. Normalized revenue per customer is the actual test year revenue, net of any
20 applicable GRT, as adjusted for normal weather, a 365-day year, and rate switching,
21 Adjustments S-1.2, S-1.4 and S-1.8, respectively, and for a portion of the miscellaneous
22 adjustment to as-billed revenue, Adjustment S-1.1.

23 Q. Please explain Adjustment S-1.6 for GRT.

Direct Testimony of
Doyle L. Gibbs

1 A. The Company acts as a collector for taxes imposed by municipalities or other
2 taxing jurisdictions on utility services. The GRT included on a customer's bill is collected by
3 the Company and then submitted to the appropriate taxing jurisdiction. The GRT included
4 on a customer's bill is also included in the revenue recorded on the books of the Company
5 with a corresponding charge to GRT expense. Theoretically, the revenue and expense offset
6 one another and therefore have no effect on net income. However, the expense accrual for
7 GRT does not always perfectly match the GRT included in revenue. Eliminating both the
8 GRT recorded in revenue, Adjustment S-1.6, and the amount recorded in expense,
9 Adjustment S-29.1, assures that GRT will have no impact on net operating income.

10 Q. If you have eliminated GRT from revenue and expense, why is GRT included
11 in the calculation of Cash Working Capital (CWC) on Accounting Schedule 8?

12 A. As previously indicated, the Company acts as a collector for the various
13 municipalities that choose to impose a tax on the utility service within their jurisdiction.
14 Although the tax should not have any impact on net income, the Company does have the use
15 of the funds until they are submitted to the taxing authority.

16 Q. How did you determine the level of GRT that should be included in the
17 determination of CWC?

18 A. The composite Missouri GRT rate in effect during the test year ending
19 June 30, 2001, was applied to the annualized level of billed rate revenues included in the
20 Staff's Missouri jurisdictional income statement to determine the amount of GRT to include
21 in the CWC calculation.

22 Q. Is there any other revenue related taxes that have been included in the
23 determination of CWC?

Direct Testimony of
Doyle L. Gibbs

1 A. Yes. Similar GRT, the Company acts as a collector for Sales tax and has the
2 use of the taxes collected until submitted to the taxing authority. Sales tax, however, unlike
3 GRT, is recorded as a liability and is not included in the income statement. To determine the
4 amount of Sales tax to include in the calculation of CWC, the composite Sales tax rate was
5 applied to the annualized level of rate revenue.

6 Q. Why is Adjustment S-1.7 to eliminate the test year unbilled revenue
7 necessary?

8 A. Unbilled revenue on the books is an attempt to restate the actual billed
9 revenue, determined through the use of billing cycles, to a calendar month basis. Because
10 tariffs are applied to a billing month, revenue adjustments have to be made to billing month
11 revenue. Removing the unbilled revenue results in billing month revenue. The 365-day
12 adjustment by Staff then adjusts the billing month revenue to account for 365 days of usage.

13 **Provision For Rate Refunds**

14 Q. Please identify and discuss the adjustment to Provision For Rate Refunds.

15 A. The account title is somewhat of a misnomer. The amount recorded
16 represents the test year accrual of EARP sharing credits. Adjustment S-2.1 reverses the test
17 year revenue accrual related to the EARP sharing credits.

18 Q. Why is adjustment S-2.1 to revenue to reverse the accrual for anticipated
19 EARP sharing credits necessary?

20 A. One of the principal purposes of the Staff audit is to determine the net
21 earnings being generated by the current applicable tariffs on a normalized and annualized
22 basis. Although credits may be required under the EARP, recognition of the accrued credits
23 in the net earnings determination would understate the revenue that can be generated through

1 the application of the current tariffs. Therefore, the accrued credits need to be reversed in
2 order to get a valid comparison of the revenue that the current tariffs generate to the revenue
3 that should be generated for the Company to earn a reasonable return. Furthermore, because
4 of the conclusion of the second EARP, UE will no longer need to accrue for the possibility of
5 sharing credits.

6 **Other Electric Revenues**

7 Q. Please explain your adjustment to other electric revenues?

8 A. Adjustment S-3.1 reduces Missouri other revenue for the reclassification of
9 revenue from the rental of utility properties and transmission service charges to system
10 revenue. The plant investment that is generating this revenue is allocated to jurisdictions
11 through the application of the fixed allocation factor. Therefore, it is appropriate to reclassify
12 this revenue to system revenue so that it can be similarly allocated.

13 **System Revenue**

14 Q. Please identify the adjustments you have made to system revenue.

15 A. Adjustment S-4.1 is the reclassification of Missouri other operating revenue to
16 system revenue and is the companion adjustment to S-3.1. Adjustment S-4.2 is other revenue
17 related to rental of utility property and transmission service charges recorded in other
18 jurisdictions that have not been included in the test year recorded income statement,
19 presented on Accounting Schedule 9, and is subject to allocation as system revenue.

20 **PAYROLL**

21 Q. Please explain your adjustments S-6.3, S-10.1, S-11.1, S-12.1, S-13.1, S-14.1,
22 S-15.1, S-16.1 and S-17.1 to payroll.

Direct Testimony of
Doyle L. Gibbs

1 A. These adjustments, in total, represent the payroll adjustment to annualize
2 O&M payroll as distributed to the various operating functions and to the allocable category
3 within the function. The payroll adjustments presented on Accounting Schedule 9, Income
4 Statement are:

5	Non-Fuel/Purch Power (Variable)	S-6.2
6	Production (Fixed)	S-10.1
7	Transmission (Fixed)	S-11.1
8	Missouri Distribution	S-12.1
9	Missouri Customer Accounts	S-13.1
10	Missouri Customer Service and Information	S-14.1
11	Missouri Sales	S-15.1
12	Missouri Administrative & General – Direct	S-16.1
13	Administrative & General (Labor)	S-17.1

14 Q. How did you calculate the annualized O&M payroll adjustment?

15 A. To calculate the annualized O&M payroll adjustment, the test year O&M
16 payroll was first reduced by the incremental Callaway nuclear refueling overtime and the
17 incentive compensation expense included in the test year O&M payroll expense. The O&M
18 payroll, reduced for these items, was then multiplied by the annual percentage wage increase
19 effective July 31, 2001. The next step in the process was to determine an annualized level of
20 the normalized incremental overtime related to Callaway refueling. The normalized
21 incremental overtime for Callaway refueling was calculated by taking an average of the
22 incremental overtime for the last three refuelings, restated at current wage rates. Two thirds
23 of the average incremental overtime calculated for refueling was used as the annualized level

Direct Testimony of
Doyle L. Gibbs

1 of payroll for the incremental Callaway nuclear refueling. The sum of the test year O&M
2 payroll excluding the test year Callaway nuclear refueling overtime, the annualized increase
3 for wage rates and the annualized Callaway nuclear refueling incremental overtime
4 represents the annualized level of payroll that was compared to the test year actual O&M
5 payroll to determine the adjustments listed above.

6 Q. Why did you reduce the test year O&M payroll by the Callaway nuclear
7 incremental refueling overtime?

8 A. The Callaway nuclear plant is on an 18-month refueling cycle. Any 12-month
9 period that includes a Callaway refueling will have an inordinate level of overtime
10 influencing the total payroll dollars for that period. Through an analysis, dating back to
11 January 1, 1998, I found that when the Callaway incremental overtime is removed from
12 O&M payroll, there is a more consistent pattern to the level of payroll for any 12-month
13 period. With the Callaway incremental overtime included, the level of payroll dollars can
14 fluctuate up and down from one year to the next. It is the Staff's opinion that removing the
15 influence of the Callaway incremental overtime from the calculation of the general wage
16 increase and addressing it as a separate issue will produce a more appropriate level of
17 annualized payroll.

18 Q. How did you determine the current cost of the incremental overtime related to
19 the refueling of Callaway?

20 A. **
21
22
23

Direct Testimony of
Doyle L. Gibbs

1

2

3

4

5

** The average of the adjusted incremental overtime costs for the three Callaway refuelings was the basis for developing the annualized cost for the incremental refueling overtime for Callaway.

6

7

Q. Why did you use an average to determine the annualized level of incremental overtime for refueling Callaway?

8

9

10

11

12

Q. The cost of incremental overtime incurred for the latest refueling that occurred during the Staff's test year was 60 percent greater than the prior two refueling of the Callaway nuclear plant. It is the Staff's opinion that an average, especially one that has been adjusted to current wage rates, would better reflect the normalized incremental overtime for refueling Callaway.

13

14

Q. Why did you reduce the test year O&M payroll for the test year incentive compensation expense to calculate the payroll adjustment related to wage increases?

15

16

17

18

19

20

21

22

23

A. The Staff has often taken the position that the Commission should not allow incentive compensation for ratemaking and has done so in this filing, as well. It would not be appropriate to include an adjustment related to an expense that the Commission has disallowed for ratemaking purposes in other ratemaking proceedings. Even if not disallowed, it would not be appropriate to include incentive compensation for purposes of calculating an annualized payroll increase because it would be speculative. Incentive compensation is not driven by contractual wage rates or approved salary levels. The base payroll may be an input in the development of the amount of incentive compensation granted, but the primary determinant for the level of incentive compensation to be awarded is based on achieving

Direct Testimony of
Doyle L. Gibbs

1 certain levels of earnings per share (EPS). Even if the Staff did not otherwise oppose
2 incentive compensation programs such as this one, it would be speculative to increase payroll
3 to reflect an increase related to an element that there is no assurance that the event, and
4 parameters that create it and determine the amount, will occur.

5 Q. Please explain how you determined the annual percentage payroll increase?

6 A. The O&M payroll incurred subsequent to the test year ending June 30, 2001
7 was compared to the test year O&M payroll. The percentage increase related to the change
8 that became effective July 1, 2001, when translated to an annual percentage increase,
9 appeared reasonable, considering the contractual wage rate increase that became effective
10 July 1, 2001.

11 Q. What was the basis for the distribution of the overall payroll adjustment to the
12 functions and categories indicated?

13 A. The total adjustment was distributed based on the actual test year distribution
14 of O&M payroll.

15 Q. You previously indicated that you are also responsible for the amount of
16 payroll that has been included in the calculation of CWC on Accounting Schedule 8. How is
17 your total annualized payroll presented in the CWC calculation?

18 A. The total annualized payroll, as allocated to Missouri jurisdictional operations,
19 is represented by the total of base payroll, vacation payroll, Federal withholding taxes, State
20 withholding taxes and employee FICA taxes. The distribution of total annualized payroll to
21 these categories was based on the ratio of the dollars in each of these categories to total
22 payroll dollars during the test year.

1 **INCENTIVE COMPENSATION**

2 Q. Please identify and explain the adjustments respecting incentive
3 compensation.

4 A. Adjustments S-6.3, S-10.2, S-11.2, S-12.2, S-13.2, S-14.2, S-15.2, S-16.2 and
5 S-17.2 remove the payments made and expensed with regards to incentive plans during the
6 test year ending June 30, 2001. Incentive compensation is included and reported as a
7 component of payroll on the books of UE. As such, the total adjustment to incentive
8 compensation was distributed to the various functions in the exact manner as the total
9 adjustment to payroll, previously discussed.

10 Q. Please describe the incentive plans affecting the level of expense for UE.

11 A. The following is a description of the incentive plan for 2000, which governed
12 incentive payments made in 2001 that occurred during the test year for this case:

A. **

10

11

12

13

**

14

15

Q. In past cases, has the Commission set minimum standards for the inclusion of
incentive plan payments in a utility's cost of service?

16

17

A. Yes. In the Report And Order in Case Nos. EC-87-114 and EC-87-115,
Union Electric Company, the Commission stated:

18

19

20

At a minimum, an acceptable management performance plan should
contain goals that improve existing performance, and the benefits of
the plan should be ascertainable and reasonably related to the plan.

21

22

Q. Has the Commission upheld and expanded upon these standards in later
cases?

23

24

25

A. Yes. The Commission applied the standards in Case Nos. EC-87-114 and EC-
87-115 to disallow incentive compensation payments in Case No. WR-88-5 involving St.
Louis County Water Company. The Commission also applied these standards in its Report

Direct Testimony of
Doyle L. Gibbs

1 And Order for Case Nos. TC-89-14, TC-89-21, TO-89-29, and TO-89-10, as well as in Case
2 Nos. TC-93-224 and TO-93-192, involving Southwestern Bell Telephone Company (SWB)
3 and its Report And Order in Case No. GR-96-285 respecting Missouri Gas Energy (MGE).

4 In its Report And Order for Case Nos. TC-93-224 and TO-93-192, the Commission stated the
5 following regarding long-term incentive plans in that case, some of which applied to SWB's

6 General Headquarters (GHQ):

7 . . . provide, at best, benefits that are too remote to be included in the
8 cost of service for Missouri ratepayers. Particularly in the case of
9 SWB-MO and GHQ, the long term incentive may reward managers for
10 results they did not achieve, based on results for which they are not
11 directly responsible and over which they have limited control.
12 Because the plan does not focus on Missouri-specific results and does
13 not include service-oriented goals, the Commission concludes that it is
14 not appropriate to include the cost of the plan in the cost of service.

15 In its Report And Order for Case Nos. TC-89-14, et al., the Commission stated:

16 In the Commission's opinion, the results of the parent corporation,
17 unregulated subsidiaries, and non-Missouri portions of SWB, are only
18 remotely related to the quality of service or the performance of SWB
19 in the state of Missouri. Achieving the goals of SBC and unregulated
20 subsidiaries is too remote to be a justifiable cost of service for
21 Missouri ratepayers. Accordingly, the Staff's proposed disallowances
22 in the senior management's long term and short term incentive plans . .
23 . should be adopted.

24 Finally, in its Report And Order in Case No. GR-96-285, Missouri Gas Energy (MGE), the

25 Commission stated:

26 . . . the costs of MGE's incentive compensation program should not be
27 included in MGE's revenue requirement because the incentive
28 compensation program is driven at least primarily, if not solely, by the
29 goal of shareholder wealth maximization, and it is not significantly
30 driven by the interests of ratepayers.

INJURIES AND DAMAGES

7

Q. Please explain injuries and damages expense.

8

A. **

9

10

11

12

13

**

14

Q. Please explain how you calculated adjustment S-17.14.

15

A. Adjustment S-17.14 adjusts injuries and damages expense to a five-year

16

average of actual charges for the 12 months ending September 30, 2001.

17

Q. Why is the Staff advocating the use of a five-year average of actual charges?

18

A. The Company's estimate and actual charges fluctuate from year-to-year.

19

**

20

21

22

** With this type of fluctuation, reliance on any one year would not be acceptable for

23

determination of an annual level of expense to be included in the cost of service for setting

1 rates. It is the Staff's opinion that on-going rates should be based on an average reflecting
2 actual payments, rather than based on estimates of future costs with unknown payment dates.

3 **EMPLOYEE BENEFITS**

4 Q. Please explain your adjustment S-17.15 to employee benefits.

5 A. Adjustment S-17.15 adjusts employee benefits for the Company's savings
6 plan.

7 Q. Why have you adjusted only the employee benefit related to the Company's
8 savings plan?

9 A. All the various components that make up the employee benefit package
10 provided by the Company, excluding pensions and employee benefits other than pensions
11 covered under Financial Accounting Standards 87 and 106, respectively, were examined.
12 Each component exhibited fluctuation from month-to-month and year-to-year with the
13 exception of the savings plan, which has consistently increased. The savings plan includes a
14 401k plan, and since the increase in expense subsequent to the test year ending June 30, 2001
15 appears to parallel the increase in payroll during that time frame, an adjustment to the savings
16 plan would appear to be appropriate.

17 Q. How did you calculate the adjustment to the savings plan?

18 A. The actual amount recorded for the 3-month period ending September 30,
19 2001, before it was distributed to O&M expense, was multiplied by four to get an annualized
20 level for UE and Ameren Services Company (AMS). The calculated amount was then
21 compared to the actual test year cost. The difference between the calculated annual amount
22 and the actual test year is the total adjustment. The adjustment related to AMS was
23 multiplied by the test year AMS labor percent that was charged to UE. The total attributable

1 to UE, the UE direct and the AMS allocated portion, was multiplied by the Total Company
2 UE O&M percent and was then multiplied by the electric O&M percent to determine
3 Adjustment S-17.15.

4 **DEPRECIATION AND AMORTIZATION EXPENSE**

5 Q. Please identify the adjustments you are sponsoring to depreciation and
6 amortization expense.

7 A. Adjustments S-18.1, S-18.2, S-19.1, S-20.1, S-21.1, S-21.2 adjust depreciation
8 expense to an annualized level based on the Staff's proposed depreciation rates. Adjustment
9 S-22.1 and S-23.1 adjusts amortization expense.

10 Q. Please explain the adjustments to depreciation expense.

11 A. Adjustment S-18.1 calculates the depreciation expense associated with
12 production and transmission plant, exclusive of nuclear plant, by comparing the depreciation
13 expense calculated on the Missouri jurisdictional plant on Accounting Schedule 5 with the
14 test year depreciation expense allocated to Missouri. The test year allocated depreciation
15 expense on Accounting Schedule 9, Income Statement, is the sum of columns B and C,
16 multiplied by the allocation factor in column D. The same mechanics are applied in the
17 calculation of Adjustments S-19.1, S-20.1 and S-21.1 for nuclear, Missouri distribution and
18 general plant, respectively. General plant is allocated on the basis of the labor factor and is
19 designated as "Plant Depreciation (Labor)" on the income statement. Adjustment S-18.2
20 reduces depreciation expense for the Missouri jurisdictional depreciation calculated on coal
21 cars. Depreciation on coal cars is expensed as a component of fuel cost as the coal is burned.
22 Adjustment S-21.2 removes the depreciation calculated on transportation and power operated
23 equipment included in the annualized depreciation on general plant. The depreciation related

1 to vehicles and power-operated equipment is typically charged to transportation clearing
2 accounts rather than depreciation expense.

3 Q. How are the adjustments to amortization expense calculated?

4 A. Adjustments S-22.1 and S-23.1 annualizes amortization expense for total
5 electric operations. The annualized level was determined by multiplying the amortization
6 expense recorded for the month of September 2001 by twelve.

7 **PAYROLL RELATED TAXES**

8 Q. Briefly describe your adjustments to taxes other than income taxes related to
9 payroll.

10 A. Adjustment S-32.3 adjusts FICA taxes and Adjustment S-32.4 adjusts payroll
11 earnings tax (PET).

12 Q. How did you calculate your adjustment to FICA taxes?

13 A. A composite FICA rate was calculated by dividing the test year FICA tax
14 expense by the test year O&M labor expense. This composite FICA rate was applied to the
15 Staff's annualized level of electric payroll and then this was compared to the test year
16 recorded FICA expense charged to electric operations. The difference is adjustment S-32.3.

17 Q. What is PET?

18 A. PET is a tax imposed by the City of St. Louis on the wages paid to employees
19 within the city limits. A statutory rate of one-half of one percent is applied to a payroll level
20 that is determined through an allocation procedure prescribed by the City of St. Louis.

21 Q. Did you use the City-prescribed allocation procedure to determine Adjustment
22 S-32.4 to PET?

1 A. No. An effective composite rate was calculated similar to the development of
2 the FICA rate previously discussed. The test year level of PET charged to electric operations
3 was divided by the electric O&M payroll expense. That rate was then applied to the
4 annualized level of payroll to determine the annualized level of PET.

5 **TERRITORIAL AGREEMENTS**

6 Q. Please identify all the adjustments you are sponsoring related to territorial
7 agreements.

8 A. I am sponsoring Adjustment P-51.2 to Plant-in-Service contained in
9 Accounting Schedule 4, Adjustments to Total Plant; Adjustment R-50.1 to Depreciation
10 Reserve on Accounting Schedule 7, Adjustments to Depreciation Reserve; and the Income
11 Statement Adjustments S-1.3 and S-12.3 on Accounting Schedule 10, Adjustments to Income
12 Statement.

13 Q. What is the purpose of the adjustments related to the territorial agreements?

14 A. The Staff adjustments for territorial agreements are designed to reverse the
15 effect on earnings related to five territorial agreements by restoring the net investment
16 (Adjustment P-51.2 to Plant in Service less Adjustment R-50.1 to Depreciation Reserve),
17 revenue and expenses as if the territorial agreements did not exist. The territorial agreements
18 considered in the determination of the adjustment were between UE and the following
19 cooperatives or municipal utility; the associated Commission case numbers also follow
20 below:

Direct Testimony of
Doyle L. Gibbs

1	Black River Cooperative	EO-95-400
2	Macon Electric Cooperative	EO-97-6, et al.
3	Farmers' Electric Cooperative	EO-98-511, et al.
4	City of Kennett	EM-99-106, et al.
5	Ozark Border Electric Cooperative	EO-99-599

6 In the above referenced cases involving Macon River Cooperative, Ozark Border
7 Electric Cooperative and the City of Kennett, Case Nos. EO-97-6, et al., EO-99-599 and
8 EM-99-106, et al., respectively, the Report And Orders, either expressly or by reference to
9 the applicable Stipulation And Agreement, provided that no party had acquiesced to any
10 ratemaking principle. No such language existed in the Report And Orders for Case Nos.
11 EO-95-400 and EO-98-511, concerning Black River Cooperative and Farmers' Electric
12 Cooperative, respectively. However, the absence of such language did not prevent the Staff
13 from making an adjustment that the Commission accepted in Case No. EO-96-14 for the
14 third year sharing credit period of the first EARP. The Staff made similar adjustments in the
15 first and second year sharing credit periods of the second EARP, Case No. EM-96-149.

16 Although the Staff recommended approval of these territorial agreements, it was with
17 the intention that the Staff would subsequently examine and address the effect of the
18 agreements on earnings for ratemaking purposes.

19 Q. Why was this condition necessary?

20 A. It is my understanding that the standard that must be met for approval of a
21 territorial agreement, according to Missouri statute, Section 394.312.4 RSMo. 2000, is that
22 the agreement in total is not detrimental to the public interest. The Commission rule,
23 4 CSR 240-2.060(13), requires that the applicant explain why the territorial agreement is in

1 the public interest. As a result of these territorial agreements, the Company's earnings were
2 less than they would have been without the agreements. The decline in earnings resulted
3 from UE realizing a net loss of customers and associated revenue from the exchange of
4 portions of its service area for portions of the service areas of the affected cooperatives and
5 municipal utility. In the Staff's opinion, this situation would constitute detriment to the
6 public interest, if the loss of earnings were reflected in customer rates.

7 Q. How do the Staff's proposed adjustments prevent public detriment?

8 A. The adjustments reverse the net reduction in earnings realized during the test
9 year by restoring the net investment, revenue and expense levels as if the territorial
10 agreements had not taken place. Adjustments P-51.2 and R-50.1, respectively, restore the
11 plant and depreciation reserve. Adjustment S-1.3 restores the lost revenue and
12 Adjustment S-12.3 includes the maintenance expense that would have been incurred.
13 Depreciation expense related to the territorial agreements plant addition is incorporated in the
14 depreciation Adjustment S-20.1, and the associated fuel expense is included in the
15 adjustment to fuel expense, Adjustment S-7.1, based on the kWh associated with the
16 territorial agreements revenue adjustment S-1.3. By restoring the net reductions in earnings,
17 the Staff has eliminated any detrimental impacts on the public interest.

18 **UNCOLLECTIBLE EXPENSE**

19 Q. Please explain your adjustment, S-13.4, to uncollectible expense.

20 A. Adjustment S-13.4 adjusts uncollectible expense to reflect the level of actual
21 net write-offs for the year ending September 30, 2001, Staff's update period.

22 Q. Please explain what is meant by the term "net write-offs".

Direct Testimony of
Doyle L. Gibbs

1 A. When the Company determines that the collection of revenue billed to a
2 customer will not be received, that revenue is "written off". Subsequently, there may be a
3 recovery of the revenue or a portion of the revenue that was written off. Net write-offs are
4 the revenues written off less any subsequent recovery.

5 Q. Is there a difference between uncollectible expense and net write-offs?

6 A. Yes. Uncollectible expense is recorded in the income statement through the
7 use of an accrual with a corresponding liability (reserve) recorded on the balance sheet. All
8 activity regarding write-offs, or subsequent collections, is charged to the reserve and does not
9 affect the level of expense recorded on the income statement.

10 Q. Why did the Staff choose to use net write-offs as the determining factor for
11 the development of uncollectible expense?

12 A. It is the Staff's opinion that net write-offs, since they reflect actual activity,
13 are a better indicator of this cost than the accruals, which are based on estimates. The use of
14 net write offs, rather than estimated uncollectible expense, follows a long-standing
15 Commission policy for establishing rates in Missouri.

16 Q. Why did the Staff choose the actual write-offs for the year ending September
17 30, 2001 as the annualized level?

18 A. Generally, because of fluctuations from year-to-year, the Staff will often
19 determine uncollectible expense through the use of an average level of net write-offs. The
20 average may incorporate anywhere from two years to five years depending on the
21 circumstances. **

22
23 ** However, the Company began experiencing substantial increases in net write-

Direct Testimony of
Doyle L. Gibbs

1 offs beginning in 2001. The Company has attributed the recent increase to delayed
2 disconnections related to the Cold Weather Rule and other extraordinary events that led to
3 larger balances to be written off and a slower economy that saw an increase in bankruptcies
4 and smaller recovery of dollars from accounts written off. Although the Staff is concerned
5 with the current upward trend in 2001, the Staff believes the actual net write-offs it is more
6 indicative of the expected on-going level.

7 **GROSS RECEIPTS TAX EXPENSE**

8 Q. Please explain adjustment S-29.1 to GRT.

9 A. Adjustment S-29.1 eliminates the GRT included in expense for the test year
10 ending June 30, 2001. This is the companion adjustment to the revenue Adjustment S-1.6
11 previously discussed. This adjustment, in conjunction with Adjustment S-1.6, assures that
12 GRT will be revenue neutral with regards to net operating income. Although the revenue and
13 expense related to GRT has been removed from the income statement, an annualized level of
14 GRT has been included in the determination of CWC on Accounting Schedule 8. As
15 previously discussed with regards to Adjustment S-1.6, the annualized level of GRT was
16 determined by applying the test year composite GRT rate to the annualized level of rate
17 revenue.

18 Q. Does this conclude your direct testimony?

19 A. Yes, it does.
