.

1	I. INTRODUCTION
2	Q. Please state your name and business address.
3	A. My name is Laura Wolfe. My business address is Missouri Department of Natural
4	Resources ("MDNR"), Division of Energy, 1101 Riverside Drive, P.O. Box 176,
5	Jefferson City, Missouri 65102-0176.
6	Q. Are you the same Laura Wolfe who filed Direct Testimony on behalf of the
7	Missouri Department of Natural Resources, Division of Energy in this case?
8	A. Yes, I am.
9	Q. What is the purpose of your rebuttal testimony in this proceed?
10	A. The purpose of my rebuttal testimony is to address the following issues:
11	• the recommendations for cost recovery of Demand Side Management
12	("DSM") programs of Missouri Industrial Energy Consumers ("MEIC")
13	witness Mr. Maurice Brubaker and Union Electric Company d/b/a Ameren
14	Missouri's ("AmerenMO") witness Mr. William Davis,
15	• the Fixed Cost Recovery Mechanism proposed by AmerenMO witness Mr.
16	William Davis,
17	• the recommendation from Staff witness Mr. John Rogers to leave the costs
18	associated with the Lighting and Appliance Program in the regulatory asset
19	account pending the completion of the evaluation of the program,
20	• the cost recovery recommendation of Mr. Brubaker for the Solar Rebates
21	issued by AmerenMO, and
22	• the study performed by AmerenMO regarding the elimination of declining
23	block rates.
	. 1

1		First of all, however, I will clarify some statements from my Direct Testimony
2		regarding AmerenMO's progress in implementing and administering its residential and
3		business DSM programs.
4		
5		II. CLARIFY STATEMENTS REGARDING DSM PROGRAM PROGRESS
6	Q.	What do you wish to clarify regarding your statements made in Direct Testimony
7		about AmerenMO's progress and implementation of its residential DSM
8		programs?
9	A.	I made the following statements regarding AmerenMO's residential DSM programs in
10		my Direct Testimony:
11 12 13 14 15 16 17 18 19 20 21		As detailed on page 1 of Schedule LAW-Direct-3, AmerenMO expended just over 60% of the 2008 budget proposed in the IRP for residential programs in 2008, but only achieved a little over 8% savings of MWh and less than 3% savings in MW. MDNR recognizes that all DSM programs take time and expense to design, implement and promote, and that in addition, AmerenMO had early difficulties with its residential program contractor. AmerenMO's efforts begin to be a bit more fruitful in 2009 when the MWh and MW savings rose to 67% and 31%, respectively. However, the efforts for 2010 were a decline from 2009: 54% savings in MWh and 27% savings in MW while spending 38% of the cumulative budget for the three year period.
22		I realized after filing that these statements are rather unclear. First of all, the use of
23		2008, 2009, and 2010, to label the progress inadvertently implies these are calendar
24		year details. AmerenMO reports three program years: April 24, 2009 to September 30,
25		2009 is reflected as Year 1; October 1, 2009 to September 30, 2010 as Year 2; and,
26		October 1, 2010 to September 30, 2011 will complete Year 3 for AmerenMO's
27		residential DSM portfolio. Also, AmerenMO reports the progress of it DSM portfolio
28		on a <i>cumulative</i> basis. Therefore, the progress I reported as the progress for 2008 (60%
29		of the 2008 budget proposed in the Integrated Resource Plan ("IRP") for residential 2

• · · ·

programs, a little over 8% savings of MWh and less than 3% savings in MW) are for 1 the five months of Year 1. The progress that I reported for 2009 (67% MWh and 31% 2 MW) is actually the cumulative progress for the seventeen months of Year 1 and Year 3 2: April 24, 2009 through September 30, 2010. And, finally, the progress I reported for 4 2010 is actually the cumulative progress for the life of the programs through December 5 2010: all of Year 1 and Year 2 and the first three months of Year 3. 6 Schedule LAW-Rebuttal-1 clarifies AmerenMO's annual and cumulative progress 7 with its residential DSM programs. 8 Q. With these clarifications, can you now provide annual MWh savings, MW 9 10 savings, and expenditure information for the three program years for the residential programs? Please state these as percentage of actual to what was 11 proposed in AmerenMO's 2008 IRP. 12 A. Yes, I can. The figures above for Year 1 (April 24, 2009 to Sept. 30, 2009) are 13 14 obviously the annual amounts for that year. As for Year 2 (October 1, 2009 to 15 September 30, 2010), AmerenMO achieved 107% of the proposed annual MWh savings, 51% of the proposed MW savings, and used 60% of the proposed budget. 16 17 Year 3 will be from October 1, 2010 to Sept. 30, 2011. In the first three months of this 18 program year, AmerenMO has achieved 45% of the proposed annual MWh savings, 25% of the proposed MW savings, and has used 23% of the proposed budget. 19 20 Q. What do you wish to clarify regarding your statements made in Direct Testimony regarding AmerenMO's progress and implementation of its business DSM 21 22 programs?

1 A. I made the following statements regarding AmerenMO's business DSM programs in

2 my Direct Testimony:

13

3 AmerenMO achieved some success with its business energy efficiency programs. 4 In 2008, the first budget year after the IRP plan, AmerenMO expended 28% of the 5 proposed budget and achieved only a little more than 20% savings in MWh and 10% savings in MW. Again, just as with residential programs, the design, 6 implementation, and promotion of DSM programs takes time and expense to ramp 7 8 up to become fully operational. AmerenMO improved on its first year by increasing the MWh and MW savings to 57% and 20%, respectively, in 2009. 9 However, as with the residential programs, the business energy programs 10 experienced a decline in 2010 with only 49% savings in MWh, and 22% savings in 11 MW while spending only 34% of the cumulative budget for the three year period. 12

14 Just as with AmerenMO's residential DSM programs, I realized after filing that these statements are rather unclear. As with its residential programs, AmerenMO reports 15 three *program* years for its business DSM programs: Year 1 is slightly different than 16 the residential since it starts on February 11, 2009 and runs through September 30, 17 2009; Year 2 and Year 3 are identical to the residential program years: October 1, 2009 18 19 through September 30, 2010 and Year 3 will be October 1, 2010 through September 20 30, 2011. Also like the residential DSM programs, AmerenMO reports progress on a cumulative basis; therefore my statements of progress in my direct testimony reflect 21 22 AmerenMO's cumulative progress. The progress I reported for 2008 (28% of the 2008 budget proposed in the IRP for business programs, a little over 20% savings of MWh 23 and 10% savings in MW) are for the eight months of Year 1. The progress I reported 24 25 for 2009 (57% MWh and 20% MW) is actually the cumulative progress for the twenty months of Year 1 and Year 2: February 11, 2009 through September 30, 2010. And, 26 finally, the progress I reported for 2010 is actually the cumulative progress for the life 27 of the business programs through December 2010: all of Year 1 and Year 2 and the 28 first three months of Year 3. 29

2

Schedule LAW-Rebuttal-1 clarifies AmerenMO's annual and cumulative progress with its business DSM programs.

Q. With these clarifications, can you now provide annual MWh savings, MW
savings, and expenditure information for the three program years for the business
programs? Please state these as percentage of actual to what was proposed in
AmerenMO's 2008 IRP.

A. Yes, I can. The figures above for Year 1 (February 11, 2009 to Sept. 30, 2009) are
obviously the annual amounts for that year. As for Year 2 (October 1, 2009 to
September 30, 2010), AmerenMO achieved 93% of the proposed annual MWh savings,
100% of the proposed MW savings, and used 60% of the proposed budget. Year 3 will
be from October 1, 2010 to Sept. 30, 2011. In just the first three months of that
program year, AmerenMO has achieved 38% of the proposed annual MWh savings,
35% of the proposed MW savings, and has used 17% of the proposed budget.

Q. Do you prefer the Commission and the other parties of this case refer to Schedule
 LAW-Rebuttal-1 rather than the schedules you provided in your Direct
 Testimony?

A. Yes, I do. I ask that LAW-Rebuttal-1 be used in lieu of Schedule LAW-Direct 2 and
Schedule LAW-Direct 3 accompanying my direct testimony.

19 Q. Do you have any recommendations regarding AmerenMO's DSM programs?

A. AmerenMO has done a commendable job of ramping up its DSM programs. It is
 achieving cost effective savings as projected by its 2008 IRP. MDNR recommends
 that AmerenMO continue to ramp up its DSM programs to pursue all cost effective
 DSM savings.

1	AmerenMO filed its 2011 IRP with the Commission on February 23, 2011. ¹
2	Review of that IRP is still in the early stages; however, MDNR is concerned about
3	AmerenMO's determination to curtail its investment in energy efficiency. This
4	position is reflected in AmerenMO's choice of the low risk resource plan as its
5	preferred resource plan. AmerenMO's low risk resource plan in the 2011 IRP includes
6	costs for DSM for the next three years of \$20.5 million and less annually. ² The 2008
7	IRP preferred resource plan included DSM investments of nearly \$40 million dollars
8	for program Year 3. ³ This curtailment is also confirmed in statements appearing in
9	recent press reports. ⁴
10	AmerenMO has indicated two mechanisms in this rate case that would help
11	AmerenMO continue its commitment to energy efficiency: (1) a more timely recovery
12	of DSM program costs by shortening the amortization of the DSM regulatory asset
13	account from six (6) years to three (3) years, and (2) a fixed cost recovery mechanism.
14	AmerenMO witness Mr. Warner L. Baxter states in his direct testimony (emphasis
15	added):
10	An discussed during our last electric rate and use must continue to make calid
47	As discussed during our last electric fate case, we must continue to make solution
17	progress in the cost recovery mechanisms for energy efficiency programs to be
18	consistent with the provisions of Senate Bill 3/6 and in order for utilities to
19	continue to make meaningful investments in energy efficiency programs. As a
20	result, we are seeking to make additional progress in the cost recovery framework
21	tor energy efficiency programs in this case. In particular, AmerenUE is proposing
22	to continue rate base treatment for energy efficiency expenditures and reduce
23	their amortization from six years to three years. In addition, we are proposing
24	to establish a tracking mechanism to account for the loss of recovery of fixed

Resource Filing Pursuant to 4 CSR 240 – Chapter 22, Chapter 7, page 1. ³ Refer to page 1 of LAW-Rebuttal-1: Total portfolio Year 3 budget.

⁴ St. Louis Post Dispatch, "Ameren cuts efficiency efforts to conserve bottom line", by Jeffrey Tomich, February 25,

^{2011,} http://www.stltoday.com/business/local/article_51367c2c-cf35-53e8-8b76-56163c706400.html

costs in our current rates that is attributable to our energy efficiency programs on a going-forward basis. While I expect that more progress will need to be made in this area in the future, this framework will help place energy efficiency expenditures on a more equal footing with investment in additional generating facilities, consistent with the provisions of Senate Bill 376, and will allow us to sustain expenditures for energy efficiency programs that are consistent with our current planned levels of spending.

7 8 9

1 2

3

4

5

6

This commitment was reiterated by Ameren witness Mr. William Davis in his direct

- 10 testimony:
- As mentioned in the direct testimony of Mr. Baxter, for AmerenUE to continue
 spending at current levels on energy efficiency, the Company's financial incentives
 need to be more closely aligned with helping customers use energy more
 efficiently. Specifically I recommend that the Commission:
- Continue rate base treatment of DSM related expenditures but reduce the amortization period from six to three years; and
- Approve a fixed cost recovery mechanism that neutralizes the impact of the throughput incentive on the implementation of energy efficiency programs and services. The proposed mechanism will allow customers to keep all savings associated with variable costs that are reduced as a result of energy efficiency programs while also realizing the significant system benefits that result from energy efficiency programs.
- I will discuss both of these recovery mechanisms in more detail in subsequent sections
- of this testimony. However, MDNR's position is that AmerenMO must commit to
- continued growth of its DSM programs, in terms of investment and savings, under the
- 27 Missouri Energy Efficiency Investment Act ("MEEIA")⁵ before the Commission
- considers the two ratemaking treatments stated above. Such a commitment is equally as
- 29 important to the goal of energy efficiency as the ratemaking treatments requested by
- 30 AmerenMO.
- 31

23

32 III. COST RECOVERY FOR DEMAND SIDE MANAGEMENT PROGRAMS

⁵ Section 393.1124, RSMo.

Q. What is your concern for the recovery of DSM program costs recommended by

2 **MIEC witness Mr. Maurice Brubaker?**

3 A. Timely cost recovery is cited in the National Action Plan for Energy Efficiency Vision 4 for 2025: A Framework for Change published in November 2008 as an important incentive for utilities to aggressively pursue all cost-effective DSM.⁶ Requiring 5 6 utilities to recover the costs of providing cost-effective DSM programs over 7 unreasonable lengths of time creates a disincentive for utilities to pursue all cost effective DSM. Mr. Brubaker proposes AmerenMO apply a ten year amortization to 8 the recovery of the costs of DSM programs.⁷ This creates a disincentive for 9 AmerenMO to pursue all cost effective DSM savings. Mr. Brubaker asserts that: 10

The idea of treating demand-side and supply-side resources comparably extends 11 not only to allowing the utility to earn the same rate of return on the asset, but also 12 13 extends to the recovery period. The costs of supply-side resources are recovered over their estimated useful life through a provision for depreciation. In the case of 14 demand-side resources, the equivalent asset is a "regulatory asset," and the 15 recovery is by means of an amortization. Thus, depreciation of supply-side 16 resources and amortization of demand-side resources are equivalent concepts that 17 18 accomplish the same purpose. Just as depreciation over the expected life of an 19 asset is the norm for supply-side resources, amortization of the regulatory asset over the life of the related demand-side measure is the appropriate recovery period 20 for demand-side resources.⁸ 21

Depreciation is the recovery of the original cost over the estimated life of the fixed 23

assets such as plant and equipment.⁹ Amortization is similar to depreciation, but it is 24

25

22

not as directly tied to an estimated life. Amortization is the accounting procedure that

⁶ National Action Plan for Energy Efficiency Vision for 2025: A Framework for Change, November 2008, pages ES-3, 2-2, and 2-10, http://www.epa.gov/cleanenergy/documents/suca/vision.pdf ^{7 7} Brubaker Direct Revenue Requirement, page 14.

⁸ Brubaker Direct Revenue Requirement, page 11.

⁹ http://financial-dictionary.thefreedictionary.com/depreciation

1	gradually reduces the cost value of a limited life or intangible asset through periodic
2	charges to income, ¹⁰ or as defined in the Uniform System of Accounts:
3	4. Amortization means the gradual extinguishment of an amount in an account by
4	distributing such amount over a fixed period, over the life of the asset or liability to
5	which it applies, or over the period during which it is anticipated the benefit will be
6	realized. ¹¹
7	
8	Asset is defined as:
9	an economic resource that is expected to provide benefits to a business. An asset
10	has three vital characteristics: (1) future probable economic benefit; (2) control by
11	the entity; and (3) results from a prior event or transaction. ¹²
12	
13	In more abbreviated terms from the Dictionary of Finance and Investment Terms, an
14	asset is:
15	anything having commercial or exchange value that is owned by a business,
16	institution, or individual. ¹³
17	
18	Or, we can turn to the Dictionary of Business Terms, which defines an asset as:
19	anything owned that has value; any interest in real property or personal property
20	that can be used for payment of debts ¹⁴
21	
22	Mr. Brubaker is equating supply side resources to supply side assets and asserting
23	that demand side resources be treated the same as supply side assets. A very important
24	first concept is that AmerenMO pays only a small portion of the cost to install energy
25	efficiency measures, with customers paying the majority of the costs and owning the
26	measures. The incentive costs associated with providing DSM measures to customers

 ¹⁰ http://financial-dictionary.thefreedictionary.com/amortization
 ¹¹ Electronic Code of Federal Regulations, Title 18: Conservation of Power and Water Resources, Part 101 Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act, http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?c=ecfr&sid=a1c36a909490a7f1508137221b50c2c6&rgn=div5&view=text&node=18:1.0.1.3.34&idno=18
 ¹² http://financial-dictionary.thefreedictionary.com/asset
 ¹³ Ibid.
 ¹⁴ Ibid.

1 do not acquire assets for the utility. AmerenMO can not control the use and 2 maintenance of the DSM measure, the customer does. AmerenMO has no access to a commercial or exchange value for individual DSM measures, nor does AmerenMO 3 have any interest in the real or personal property that results from a DSM measure. In 4 short, AmerenMO does not own the DSM measures that are installed through DSM 5 programs. While energy savings benefits continue for widely varying years, from an 6 average of 2 years to an average of 28 years per Mr. Brubaker's own testimony,¹⁵ the 7 8 matching asset that provides those benefits is not owned by the utility and, therefore, is not an asset to the utility. The costs to provide DSM programs should not be subjected 9 10 to the same treatment as supply side assets.

11 Supply side resources may include some resources that are not physical generating plant assets to the utility. Purchase power agreements are a good example. When 12 13 utilities engage in a purchase power agreement with a generation provider, the cost of 14 power purchased is expensed at the time it is purchased, and the annual capacity 15 necessary to deliver that purchased power is expensed in 12 equal increments over the 16 year of the purchase. The investments utilities make in DSM programs is more akin to the accounting for the power received in a purchase power agreement than to the 17 18 purchase of a new generation facility.

Q. Currently, AmerenMO has an amortization period of six (6) years. AmerenMO
 witness Mr. Davis recommends reducing that to three (3) years. What is MDNR's
 position on shortening the amortization period?

¹⁵ Bribaker, Direct Revenue Requirement, page 13.

1 A.

A. Cost-effective demand side management economically reduces energy consumption.

2 The State of Missouri has recognized the value of implementing cost effective DSM

3 programs in MEEIA:

It shall be the policy of the state to value demand-side investments equal to traditional investments in supply and delivery infrastructure and allow recovery of all reasonable and prudent costs of delivering cost-effective demand-side programs. In support of this policy, the commission shall:

4 5

6

7

12

13 14

- (1) Provide timely cost recovery for utilities;
- (2) Ensure that utility financial incentives are aligned with helping customers use energy more efficiently and in a manner that sustains or enhances utility customers' incentives to use energy more efficiently; and
 (3) Provide timely earnings opportunities associated with cost-effective measurable and verifiable efficiency savings. ¹⁶
- 15 Lengthy amortization of utility DSM costs provides a clear disincentive to utility
- 16 investment in DSM contrary to MEEIA. Mr. Davis' recommendation to reduce the
- 17 years of amortization from six (6) to three (3) may address the removal or reduction of
- 18 the disincentive of untimely DSM cost recovery. AmerenMO is best suited to state if
- 19 this shortened amortization period is sufficient to remove the disincentive to allow it to
- 20 continue its progress in DSM programs. As stated in direct testimony, MDNR's
- 21 position is that utilities achieving the goals of investing in all cost effective DSM
- should be allowed to expense program costs.¹⁷
- 23

24 IV. FIXED COST RECOVERY MECHANISM PROPOSED BY AMERENMO

Q. Do you support the Fixed Cost Recovery Mechanism proposed by AmerenMO witness Mr. William Davis?

¹⁶ Section 393.1124, RSMo.

¹⁷ Section 393.1124, RSMo.

1 A. No. Current rate structures for AmerenMO are designed to recover fixed costs through 2 variable rates, and those variable rates are determined based on a usage amount that 3 represents a single snap-shot in time, and successful DSM programs will have an 4 impact on customer usage. While MDNR supports appropriate measures to reduce 5 utility disincentives to invest in demand side programs, MDNR cannot recommend the 6 Commission allow AmerenMO to implement the Fixed Cost Recovery Mechanism as 7 proposed by Mr. Davis at this time without a commitment from AmerenMO to pursue all cost-effective DSM programs. As I stated above, AmerenMO has indicated that the 8 9 Fixed Cost Recovery Mechanism ("FCRM") is one of two recovery mechanisms in this 10 rate case that would help AmerenMO continue its commitment to energy. I also stated 11 above that it is equally important to have a commitment from AmerenMO to continue 12 the growth of their DSM programs in terms of investment and savings before the Commission allows the two recovery mechanisms, a three year amortization for 13 program cost recovery and the FCRM, introduced by AmerenMO be implemented. As 14 15 detailed earlier in this testimony, AmerenMO is not presenting such a commitment in its recently filed IRP. 16

17

18

V. LIGHTING AND APPLIANCE REBATE AMORTIZATION

Q. Staff witness, Mr. John Rogers, has recommended to the Commission that the
costs associated with the Lighting and Appliance Program remain in the
regulatory asset account pending the evaluation of the program by AmerenMO.
Mr. Rogers states that the evaluation of the program is necessary in order to

2

determine the prudency of the costs associated with the program. Do you agree with that recommendation?

3 A. No. I do not. The evaluation, measurement, and verification ("evaluation") of a DSM program seeks to demonstrate the value of energy efficiency programs by 4 providing accurate, transparent and consistent assessments of methods and 5 performance.¹⁸ The amortization of DSM program costs from a regulatory asset 6 7 account should not be delayed for the results of an evaluation of the DSM program. 8 The evaluation will not determine if expenditures for the DSM program were prudent, or imprudent. An evaluation that determines that a program is not performing as 9 anticipated is not proof of imprudent expenditures, but rather a lesson learned that 10 11 could lead to program changes to improve the performance. Although not yet in effect, the Commission recognizes this distinction in proposed rule 4 CSR 240-3.163 Electric 12 Utility Demand-Side Programs Investment Mechanisms Filing and Submission 13 Requirements (emphasis added): 14 (7) EM&V reports shall document, include analysis, and present any 15 applicable recommendations for at least the following, and all models and 16 spreadsheets shall be provided as executable versions in native format with 17 all formulas intact: 18 19 20 (A) Process evaluation and recommendations, if any; and (B) Impact evaluation— 21 22 1. The lifetime and annual gross and net demand savings and energy 23 savings achieved under each program, and the techniques used to 24 estimate annual demand savings and energy savings; and 25 2. A demonstration of the cost-effectiveness of the program, to include at a minimum the TRC of each program. 26 27 A. If a program is determined not to be cost-effective, the electric utility shall identify the causes why and present 28

¹⁸ American Council for an Energy-Efficient Economy, "Evaluation, Verification, and Measurement:, http://www.aceee.org/topics/emv

1 2 3	aj pi	ppropriate program modifications, if any, to make the rogram cost-effective.
3 4 5 6 7 8	If et pr de pr	There are no modifications to make the program cost- ffective, the utility shall describe how it intends to end the rogram and how it intends to achieve the energy and emand savings initially estimated for the discontinued rogram.
9 10 11 12 13	B is re	3. The fact that a program proves not to be cost-effective a not by itself sufficient grounds for disallowing cost ecovery. ¹⁹
14	With all new programs,	utilities use the best information that is available to project
15	the cost effectiveness of a p	rogram. Programs that are projected to be cost effective are
16	then implemented and adr	ninistered. AmerenMO designed this program and duly
17	submitted a proposed tariff	filing to implement the program, which was approved by
18	the Commission. Staff has	s presented no evidence that AmerenMO mismanaged the
19	Lighting and Appliance	program in any way that would result in imprudent
20	expenditures. An evaluation	on of the Lighting and Appliance program will not provide
21	the Staff evidence that An	merenMO has or has not mismanaged this Commission-
22	approved program and ha	as or has not imprudently incurred expenditures in this
23	program.	
24	AmerenMO is reporting	g excellent results from this program. As can be seen on
25	page 2 of Schedule LAW-	Rebuttal-1, AmerenMO is reporting that this program has

successfully produced savings in MWh (66,108 MWh saved in program Year 2
compared to the projected 37,179 MWh); savings in MW (6.1 MW saved in Year 2
compared to 3.2 MW projected; and, AmerenMO used 113% of the projected budget

¹⁹ Missouri Public Service Commission, Case No. EX-2010-0368, Rulemaking Transmittal, October 4, 2010.

for this program for Year 2. There are no indications that AmerenMO has imprudently
expended funds on this program. MDNR recommends that the costs of implementing
the Lighting and Appliance program that are reflected in AmerenMO's regulatory asset
account be recovered in rates in whatever cost recovery mechanism is approved by the
Commission in this rate case.

- 6
- 7

VI. COST RECOVERY RECOMMENDATION FOR SOLAR REBATES

Q. MIEC witness Mr. Brubaker recommended to the Commission that AmerenMO's
 cost of providing rebates for solar equipment installations by customers be
 recovered over a ten year amortization. Do you agree?

11 A. No. For the very same reasons that I expressed in response to Mr. Brubaker's recommendation to amortize DSM program costs over 10 years, the costs associated 12 with providing solar rebates should be expensed and recovered in the year in which 13 they occurred or over a very short amortization period. AmerenMO implemented this 14 program in order to comply with Proposition C which was passed by Missouri voters 15 November 11, 2008.²⁰ This is a mandatory program that requires AmerenMO to offer 16 these rebates. AmerenMO should not be required to carry the costs of these rebates 17 any longer than one year. 18

- 19
- 20

VII. DECLINING BLOCK RATES

²⁰ Amendment to Chapter 393 of the Revised Statutes of Missouri, Relating to Renewable Energy, version 4, 2008-031; http://www.sos.mo.gov/elections/2008petitions/2008-031.asp

1	Q. The First Nonunanimous Stipulation and Agreement in AmerenMO's recent rate
2	case, Case No. ER-2010-0036, states the following: "prior to its next general rate
3	case, the Company shall conduct a study addressing the elimination of declining
4	block rates for residential service in a revenue neutral manner, and will file the
5	results of this study in its next general electric rate case." Did AmerenMO
6	provide the results of such a study?
7	A. Yes. AmerenMO witness Mr. Wilbon Cooper stated in his direct testimony that
8	AmerenMO conducted an analysis of the winter billing for residential electric space
9	heating. Mr. Cooper stated:
10 11 12 13	This group of approximately 217,000 residential customers was chosen as their higher than average winter usage is more likely to be negatively impacted by a revenue neutral elimination of the declining block rate.
14	Q. Will these customers be negatively impacted by a revenue neutral elimination of
15	the declining block rate?
16	
	A. Some customers will be. The purpose of removing declining block rates is to encourage
17	A. Some customers will be. The purpose of removing declining block rates is to encourage energy efficiency and conservation. Declining block rates do not send a signal to

17 18 19 20 21 22 23 24	 A. Some customers will be. The purpose of removing declining block rates is to encourage energy efficiency and conservation. Declining block rates do not send a signal to encourage reduced usage. It is inevitable that some customers, higher usage customers, will see an increase in bills, but this increase is offset by decreases for the first block of billing units, kWhs. Lower usage customers may actually see a decrease in monthly bills. Accompanying this testimony is Schedule LAW-Rebuttal-2. This is an analysis of removing the declining block rate for the winter energy charge for residential customers. This analysis calculates a flat rate that could generate the same revenue for

•

•

•

•

. ' Y

•

16

2010 as the current two rates generate. Currently, AmerenMO's winter energy charge
for residential customers is 6.78¢ for each of the first 750 kWh for each customer each
month, a 4.61¢ for each kWh over 750 kWhs that same month. A flat rate that would
generate the same revenue for the same number of kWhs is 5.47¢ per kWh.

5 On the second page of Schedule LAW-Rebuttal-2 the impact of this change to the structure of the winter energy charge is detailed for monthly usage amounts of: 750 6 kWhs; 1,000 kWhs; 1500 kWhs; 2,000 kWhs; 4,000 kWhs; 6,000 kWhs; 10,000 kWhs; 7 8 and 15,000 kWhs. The percentage changes detailed in this analysis are for a customer's total monthly bill. With the current rates, the lower usage bills (750 kWhs 9 to 1,500 kWhs) would see decreases ranging from \$9.83 to \$3.39 (17% of the bill to 10 4% of the bill). Monthly bills for usage starting somewhere between 1,500 kWhs to 11 2,000 kWhs would start to see slight increases (\$0.90, 1% of the bill) that grow to 12 \$112.55, a 16% increase for a bill for 15,000 kWhs. 13

The same analysis is reflected on page 2 of Schedule LAW-Rebuttal-2 using rates proposed by AmerenMO in this rate case. The results are not markedly different. With the proposed rates and an equivalent flat rate energy charge, lower usage bills (750 kWhs to 1,500 kWhs) would see decreases ranging from \$11.37 to \$3.92 (16% of the bill to 3% of the bill). Bills for usage starting somewhere between 1,500 kWhs to 2,000 kWhs would start to see slight increases (\$1.04, 1% of the bill) that grow to \$130.18, a 15% increase, for customers using 15,000 kWhs in a month.

Q. Is this how Mr. Cooper calculated the impact of a removing the declining block
rates from the residential winter energy charge?

1	A. No. Mr. Cooper provided a copy of AmerenMO's analysis in response to MDNR's
2	Data Request DNR 006. In the analysis, the flat winter energy charge that is used is
3	6.33¢ per kWh. However, it is not clear to me how this amount was determined to be a
4	rate that would have a revenue neutral impact if used rather than a declining block rate.
5	In AmerenMO's analysis, the 6.33¢ per kWh flat winter energy charge will generate
6	revenues of \$195,797,854 when used with the proposed per-month customer and low
7	income pilot program charge. However, AmerenMO's analysis indicates that the use
8	of all of the rates, including the proposed declining block winter energy charge,
9	proposed by AmerenMO in this rate case would generate revenues of \$185,158,038.
10	This is not a revenue-neutral analysis.
11	Q. What is your recommendation to the Commission regarding declining block
12	rates?
13	A. I recommend that the Commission direct AmerenMO to remove declining block rates
14	in the revenue neutral fashion I demonstrated.
15	
16	VII. TAUM SAUK COST RECOVERY
17	Q. In the Staff's report on revenue requirement and cost of service, Staff witness Ms.
18	Lisa Hanneken addressed adjustments to the costs associated with the rebuilding
19	of the Taum Sauk reservoir that are included in the revenue requirement. ²¹
20	Office of Public Counsel witness Mr. Ryan Kind also addressed adjustments to
21	the costs included in the cost of service for the Taum Sauk reservoir rebuild. ²²
22	Does MDNR have a position on the determination of what costs, if any, from the

 ²¹ Missouri Public Service Commission Staff Report – Revenue Requirement – Cost of Service, page 102.
 ²² Kind, Direct

rebuilding of the Taum Sauk reservoir should be included in the revenue 1 requirement for AmerenMO in this case? 2 A. MDNR has no position on the determination of what costs, if any, from the rebuilding 3 of the Taum Sauk reservoir should be included in the revenue requirement for 4 AmerenMO in this case. The consent agreement referenced in my direct testimony, 5 states²³: 6 AmerenUE ... further acknowledges the audit powers of the Missouri 7 Public Service Commission to ensure that no such recovery is pursued.²⁴ 8 9 MDNR, too, acknowledges the audit powers of the Commission and will defer to the 10 11 Commission to determine eligible costs that may be recovered from ratepayers Q. Does this conclude your testimony? 12 13 A. Yes.

²³ Wolfe Direct, page 12.
