

Exhibit No.:	
Issues:	Accumulated Deferred Income Taxes Including Excess Balances
Witness:	John R. Wilde
Exhibit Type:	Rebuttal
Sponsoring Party:	Missouri-American Water Company
Case No.:	WR-2020-0344
Date:	January 15, 2021

MISSOURI PUBLIC SERVICE COMMISSION

CASE NO. WR-2020-0344

REBUTTAL TESTIMONY

OF

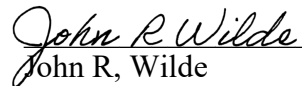

JOHN R. WILDE

ON BEHALF OF

MISSOURI-AMERICAN WATER COMPANY

AFFIDAVIT

I, John R. Wilde, under penalty of perjury, and pursuant to Section 509.030, RSMo, state that I am V.P. Tax Strategy and Compliance for American Water Services Compan, that the accompanying testimony has been prepared by me or under my direction and supervision; that if inquiries were made as to the facts in said testimony, I would respond as therein set forth; and that the aforesaid testimony is true and correct to the best of my knowledge and belief.

John R, Wilde

January 15, 2021

**REBUTTAL TESTIMONY
JOHN R. WILDE
MISSOURI-AMERICAN WATER COMPANY
CASE NO. WR-2020-0344**

III. AMORTIZATION METHOD AND PERIOD FOR EADIT BALANCES 9

REBUTTAL TESTIMONY

JOHN R. WILDE

I. INTRODUCTION

1

2 **Q. Please state your name and business address.**

3 A. My name is John R. Wilde. My business address is One Water Street, Camden, NJ 08102

4 **Q. On whose behalf are you submitting this testimony?**

5 A. I am submitting this rebuttal testimony on behalf of Missouri-American Water Company
6 (“Missouri-American” or the “Company”).

7 **Q. Did you previously provide direct testimony in this proceeding?**

8 A. Yes.

9 **Q. What is the purpose of your rebuttal testimony?**

10 A. The purpose of my rebuttal testimony is to respond to certain portions of the Missouri
11 Public Service Commission (“Commission”) Staff Report – Cost of Service (“COS
12 Report”), the direct testimony of Office of the Public Counsel (“OPC”) Witness John S.
13 Riley, and the direct testimony of Missouri Industrial Energy Consumers (“MIEC”)
14 witness Greg R. Meyer.

15 My rebuttal testimony first addresses the inclusion of accumulated deferred income taxes
16 (“ADIT”) in rate base. I address an apparent error by Mr. Riley with respect to the
17 Company’s rate base and an inadvertent error that Staff made in computing rate base that
18 double-counts the amount of excess ADIT (“EADIT”) to be included as a reduction to rate
19 base. I then address Mr. Riley’s contentions regarding the inclusion of net operating

1 losses (“NOL”) in rate base calculations. The final section of my rebuttal testimony
2 addresses the proposals of MIEC and Staff to use an amortization period of three years and
3 five years, respectively, for “unprotected” EADIT balances.

4 **Q. Have you prepared any schedules to accompany your rebuttal testimony?**

5 A. Yes, I have prepared two schedules. First, I have revised the schedule attached to my
6 direct testimony as Schedule JRW-1 to reflect new Internal Revenue Service (“IRS”)
7 guidance regarding the treatment of certain EADIT balances and a minor correction with
8 respect to the EADIT balance. This revised schedule is attached to my rebuttal testimony
9 as Schedule JRW-1-R. The second schedule, attached as Schedule JRW-2-R, compares
10 the impacts of adopting either Staff’s or MIEC’s proposed amortization periods for
11 unprotected EADIT to the impact of adopting the Company’s proposal to amortize plant
12 related unprotected EADIT over a period proportional to that produced by the average rate
13 assumption method (“ARAM”), and non-plant related unprotected EADIT over a period
14 of 20 years.

15 **II. ACCUMULATED DEFERRED INCOME TAXES – INCLUSION IN RATE BASE**

16 **Q. On page 2, line 18 of his direct testimony, Mr. Riley states that the Company has**
17 **proposed a base line rate base balance amount in this case of \$407 Million. Is this an**
18 **accurate statement?**

19 A. No. Mr. Riley does not cite a source for this amount, but assuming he is using a historic
20 test period ending December 31, 2019, the ADIT included in rate base the Company

1 proposed as of that date is \$443 million.¹

2 **Q. Referring to Staff’s Accounting Schedule: 2, Rate Base Schedule, Staff uses an ADIT**
3 **amount as of June 30, 2020 of \$451,144,884 and an EADIT amount of \$148,103,888**
4 **to compute rate base as of June 30, 2020. In doing so, Staff refers to schedules**
5 **provided by the Company. Are these the correct amount of ADIT and EADIT to be**
6 **included in rate base as of June 30, 2020?**

7 A. No. The correct total ADIT balance (including EADIT) to be included in rate base as of
8 June 30, 2020 is \$453,671,105². This ADIT balance already includes EADIT of
9 \$148,103,888.³ Staff apparently had inadvertently included EADIT a second time, not
10 realizing it was already included in the total ADIT balance as proposed by the Company,
11 thus double-counting the effect the EADIT balance as of June 30, 2020 should have on
12 ADIT. Further it appears Staff used a number for June 30, 2020 provided by the Company
13 that was later updated to the \$453,671,105.

14 **Q. Has Staff acknowledged the inadvertent double-counting of EADIT in its ADIT**
15 **balance and that the correct total is \$453,671,105?**

16 A. Yes, that is my understanding.

17 **Q. Mr. Riley asserts at page 2 of his direct testimony, starting on line 9, that the**
18 **Company’s inclusion of a net operating loss in its calculations of rate base and**
19 **revenue requirement is “inappropriate.” Do you agree?**

¹ Exhibit workpaper labeled “Deferred Tax Workpaper”

² Provided to Staff when requested additional details for the 06/30/20 tax expense calculation. The \$451m was provided before that with the Company’s June data update which was provided 09/11/20.

³ DT Wilde – Schedule JRW-1.

1 A. No. Mr. Riley bases his argument on a false belief that the NOL is something that only
2 exists in filing a tax return, and that it is not accounted for as a reduction of deferred tax
3 expense, nor as part of ADIT. To the contrary, the Company accounts for the impact of its
4 being in a net operation loss position for tax, financial, and regulatory accounting purposes.
5 The Company does so based on established tax, financial and regulatory guidance and
6 practice.

7 **Q. Can you provide an example of proper accounting treatment of an NOL?**

8 A. Yes. Assume a utility was allowed to claim bonus depreciation deductions of \$100.00, but
9 only had \$50.00 of taxable income before it claimed that deduction. It would record a
10 depreciation-related deduction of \$100.00, a deferred tax liability (“DTL”) of (\$21.00) and
11 an NOL related deferred tax asset (“DTA”) of \$10.50, for a net ADIT balance of (\$10.50),
12 which is the correct balance of tax it was able to defer as a result of having claimed bonus
13 depreciation. It will be able to benefit from the remaining \$10.50 in a future year as taxable
14 income allows. Mr. Riley erroneously suggests that the utility should have an ADIT
15 balance of (\$21.00) reducing rate base when the Company was only able to reduce its
16 current tax obligation to the IRS by \$10.50. The offset to these deferred tax accounting
17 entries is ADIT.

18 **Q. On page 2 of his direct testimony, starting on line 21, Mr. Riley makes the following**
19 **statement: “Under established rate making procedures, a company’s rate base is**
20 **reduced by the deferred tax balance (“ADIT”) that has accumulated due to the**
21 **difference between the regulatory depreciation balance used in ratemaking and the**
22 **larger depreciation balance created by the use of accelerated depreciation methods**
23 **employed for tax purposes.” Is that accurate?**

1 A. No, that is not the established practice that I am familiar with in Missouri, and it is not the
2 established practice that I am familiar with as applied by any other state commission. The
3 established practice of this Commission and all other commissions using a normalized
4 method of accounting to account for deferred taxes is to include ADIT as a net balance
5 carried on a utility's balance sheet consisting of all deferred tax assets and liabilities
6 accumulated to date that are related to the underlying property that makes up rate base
7 (generally Plant). Pursuant to the NARUC Uniform System of Accounts (1973/1976),
8 those deferred tax assets and liabilities can be found in one or more of the following
9 accounts: 186, 253, 255, 281, 282, and/or 283. Assuming those deferred tax balances have
10 accrued and will reverse through deferred tax expense using a normalized method of
11 accounting, as used by this Commission and most other state commissions, the deferred
12 tax balances in each of these accounts would be included in rate base to the extent the
13 balance relates to the utility plant and other assets and liabilities included in rate base. For
14 example, following Mr. Riley's definition of what the ADIT balance is he would exclude
15 all ADIT except for the ADIT that related to having claimed accelerated tax depreciation.
16 In doing so he would not only exclude the NOL Deferred Tax Asset ("DTA") from the
17 ADIT included in rate base, but he would also exclude the Tax Repairs Deferred Tax
18 Liability ("DTL") from that balance. Tax repairs is not associated with having claimed
19 accelerated tax depreciation, and is claimed pursuant to a different section of the tax code
20 than tax depreciation. However, like the NOL DTA it is the established practice to include
21 the entire plant related ADIT balance in rate base, including but not limited to the NOL
22 DTA and the Tax Repairs DTL.

1 **Q. On page 3 of his direct testimony, starting on line 2, Mr. Riley characterizes MAWC’s**
2 **position related to the NOLC and its impact on the Company’s ADIT balance as**
3 **follows: “MAWC is arguing that the NOL created by accelerated depreciation and**
4 **other IRS tax advantage allowances should be applied as an offset to this ADIT rate**
5 **base reduction.” Is that a correct characterization?**

6 A. No. As I previously explained, the ADIT is not a balance exclusively limited to what are
7 generally referred to as method/life (“M/L”) differences or the difference between book
8 depreciation methods and life, and tax depreciation methods and life (“M/L Depreciation
9 Differences”). I am not aware of any regulatory or financial accounting principle that limits
10 and applies the definition of ADIT in the way suggested by Mr. Riley, nor has he referenced
11 any such supporting principle. Therefore, there is no need to seek an offset to the ADIT
12 balance already carried by the Company, or to the ADIT balances that have been
13 historically included by the Commission as a component of rate base. It is Mr. Riley who
14 attempts to adjust ADIT by selectively excluding items such as NOL DTAs that have a
15 history of having been included in the ADIT balance included in rate base.

16 **Q. In computing rate base in this case, has Staff limited the ADIT balance included in**
17 **rate base to the balance related to M/L differences and excluded the portion related**
18 **to the NOL, as suggested by Mr. Riley?**

19 A. No, Staff includes the ADIT balance related to the underlying utility plant balance in its
20 rate base calculation. The amount of ADIT on Staff Accounting Schedule 2 is a number
21 that was provided by the Company in an update in September of 2020. This amount is
22 \$451,144,884. As discussed earlier this amount was further updated to the \$453,671,105
23 amount. This same amount is currently included in the Company’s own rebuttal June 30th

1 rate base shown on Mr. LaGrand's schedule BWL-1. When the Company provided the
2 number used by Staff, and when the Company puts the same number in its own rate base,
3 it does not make any adjustment for the DTA related to the NOL. Therefore, the DTA
4 related to the NOL balance would have been included in Staff's total in Staff Accounting
5 Schedule 2.

6 **Q. On pages 3 and 4 of his testimony, Mr. Riley suggests the Company's tax expense is**
7 **accrued without regard to the NOL, and therefore the NOL DTA was over-collected**
8 **from customers. Do you agree?**

9 A. No. The deferral of tax resulting from the acceleration or deferral of a tax deduction has
10 no impact on the customers' tax expense. Using the example from above, assume the
11 \$50.00 of taxable income before accounting for accelerated depreciation was the same as
12 the utility's pre-tax income, meaning the only book to tax difference the Company had was
13 tax depreciation. In that case, before the utility recorded tax depreciation it would have
14 first recorded a current tax expense of \$10.50 and a deferred tax expense of \$0.00, for a
15 total of \$10.50 ($\$50.00 \times 21\%$). In recording depreciation expense, it would have recorded
16 a reduction of current expense of (\$21.00), and an increase in deferred tax expense of
17 \$21.00. Still, the total tax expense on the utility's pre-tax income would be \$10.50.
18 However, the resulting negative current tax expense of (\$10.50) implies you will get a
19 refund from the IRS in claiming more deductions than there is taxable income to apply to
20 those deduction. In addition, it would imply that the utility has a deferred tax expense
21 payable to the IRS in the future of \$21.00 as of that point in time. Instead, what is allowed
22 and what is the reality is the IRS allows the utility to take its taxable income and tax to
23 zero, and to carry any loss over to a future year as a NOL deduction. To record the NOL

1 the utility would record an increase of \$10.50 to current tax expense resolving current tax
2 expense to zero, which is what the utility will pay, and record a decrease in deferred tax
3 expense of (\$10.50) with the deferred tax expense now totaling \$10.50. Total tax expense
4 recorded and collected from customers would be \$10.50, and would be related to having
5 earned a \$50.00 return on rate base. The \$10.50 in tax expense remains the same regardless
6 of the deferred tax accounting. Customers would benefit with a reduction in rate base for
7 ADIT of (\$10.50), equaling the utility's net outstanding amount owed to the IRS in future
8 periods. Mr. Riley incorrectly suggests that the amount of the ADIT balance impacting
9 rate base should be (\$21.00), even though that would be greater than the tax expense paid
10 by the customers, and greater than the amount by which the Company was able to reduce
11 its tax obligations.

12 **Q. On page 3 of his testimony, starting on line 5, Mr. Riley suggests that the NOL need**
13 **not be included because a portion of that NOL has been identified as unprotected and**
14 **not subject to the tax normalization rules. Would his suggestion to exclude the entire**
15 **NOL due to the fact that part of the NOL is unprotected result in a normalization**
16 **violation?**

17 A. Yes, as has the IRS consistently ruled. In addition, the consequences of that violation
18 would not be tempered by the fact that only part of the NOL was subject to those rules.

19 **Q. If he were suggesting that only the unprotected NOL ADIT be excluded, would that**
20 **adjustment to ADIT be appropriate in the context of a base rate case?**

21 A. No. While it would not be a violation of the tax normalization rules, it would be contrary
22 to established practice in base rate cases where the full NOL has consistently been included,
23 and would be inconsistent with the facts relevant to a base rate case where there is no issue

1 in measuring the amount of NOL present using a historic test period.

2 **III. AMORTIZATION METHOD AND PERIOD FOR EADIT BALANCES**

3 **Q. Please describe Schedule JRW-1-R.**

4 A. As noted above, Schedule JRW-1-R is a revised version of the schedule attached to my
5 direct testimony as Schedule JRW-1. The revisions reflect new Internal Revenue Service
6 (“IRS”) guidance regarding the treatment of certain EADIT balances and a minor
7 correction with respect to the EADIT balance. Specifically, the IRS guidance allowed the
8 Company to change the labeling of items that were uncertain, to protected or unprotected
9 as appropriate. As a result of this guidance, the negative EADIT related to the Net
10 Operating Carryforward was split into its protected and unprotected portions based on a
11 with and without test, and Cost of Removal was changed to unprotected. In addition,
12 Missouri Corporate income tax law allows for a deduction of federal tax when computing
13 Missouri state income tax. This results in effectively having a lower state income tax rate
14 than the statutory rate. While the EADIT in the prior exhibit and data response did contain
15 the EADIT for this effect for items tracked in the PowerTax system related to plant items,
16 it did not include the amount of EADIT related to any non-plant or plant-related EADIT
17 maintained outside of the PowerTax system. These amounts have now been included. This
18 revised schedule is attached to my rebuttal testimony as Schedule JRW-1-R.

19 **A. “Protected” EADIT Amortization**

20 **Q. Do the witnesses for Staff and MIEC agree with the Company’s proposed**
21 **amortization method and life for “protected” EADIT?**

22 A. Yes. MAWC has proposed that protected EADIT balances be amortized using ARAM, as
23 required by the Tax Cuts and Jobs Act (18 §13001(d)(1)) (“TCJA”). Staff witness Bolin

1 agrees with this method and life for protected balances. (COS Report, p. 77). MIEC
2 witness Meyer also agrees with this method and life for protected balances. (Meyer DT,
3 p. 30).

4 **B. “Catchup Period” EADIT Amortization**

5 **Q. Does Staff agree with the Company’s proposed amortization period for EADIT that**
6 **amortization that would have occurred during the “catchup period” (the period**
7 **between the date of enactment of the TCJA and the effective date of new rates)?**

8 A. Yes. MAWC has proposed that the amortization of all EADIT balances that would have
9 occurred from January 1, 2018 through effective date of new rates authorized in this case
10 (“Catchup Period)” be amortized using a 5-year amortization period. Staff witness Bolin
11 agrees with this method and life for catchup protected balances. (COS Report, p. 79).

12 **Q. Does MIEC witness Meyer agree with the Company’s proposed amortization for the**
13 **Catchup Period EADIT balance?**

14 A. No. Mr. Meyer proposes a period of three years to amortize the protected EADIT that
15 would have been amortized during the Catchup Period. (Meyer DT, p. 30).

16 **Q. Is Mr. Meyer’s proposal consistent with the Stipulation and Agreement entered into**
17 **by MIEC in MAWC’s last rate case?**

18 A. No, it is not. In MAWC’s last rate case (Case No. WR-2017-0285), MIEC entered into an
19 unopposed Stipulation and Agreement with the Company, Staff, OPC and other parties to
20 resolve a number of issues, including the treatment of EADIT that would have been
21 credited to customers during the Catchup Period. In so doing, MIEC, together with Staff,
22 OPC, the Company and others, expressly stipulated and agreed to amortization of the

1 Catchup Period balance over *five years*:

2 To the extent it does not create a normalization violation, until the
3 normalization begins to be provided to customers, a tracker will
4 capture the normalization that would have occurred in prior periods
5 and will be held until the next rate case. *At the time of the next rate*
6 *case, the tracker balance will be amortized over five years.*
7 Tracking of excess ADIT will begin as of January 1, 2018.⁴
8

9 Since MIEC stipulated and agreed that a five-year amortization of the EADIT that would
10 have been credited to customers during the Catchup Period would be implemented in this
11 rate case, Mr. Meyer’s attempt to advocate a different amortization period on behalf of
12 MIEC in this proceeding should be rejected.

13 **C. “Unprotected” Plant and Non-Plant EADIT Amortization**

14 **Q. Do the witnesses for Staff and MIEC agree with the Company’s proposed**
15 **amortization method and life for “unprotected” plant and non-plant EADIT**
16 **balances?**

17 A. No. MAWC has proposed that unprotected plant-related EADIT be amortized using
18 ARAM, consistent with the method and life used for protected plant-related EADIT
19 balances, and consistent with the period over which the deductions related to investment
20 in utility plant that gave rise to the EADIT will be recovered from customers. MAWC has
21 proposed that unprotected *non*-plant EADIT be amortized using a 20-year period,
22 consistent with the reversal period of the underlying book to tax differences. Staff witness
23 Bolin proposes that a 5-year amortization period be used for all “unprotected” EADIT
24 balances. (COS Report, p 78). MIEC witness Mr. Meyer proposes a 3-year period for

⁴ *In the Matter of Missouri-American Water Company’s Request for Authority to Implement a General Rate Case increase for Water and Sewer Service Provided in Missouri Service Areas*, Case No WR-2017-0285, Stipulation and Agreement at 4 (filed Mar. 1, 2018) (emphasis added).

1 unprotected EADIT balances. (Meyer DT, p. 28).

2 **Q. Given the positions of the other witnesses regarding the relevant amortization method**
3 **and life to use for unprotected EADIT balances, has the Company changed its**
4 **proposed amortization period for unprotected EADIT balances?**

5 A. No, the Company continues to believe its proposal best serves the long-term interest of
6 MAWC customers.

7 **Q. Have you prepared a schedule comparing the impacts of the various proposals for**
8 **amortizing the Company’s unprotected EADIT balances?**

9 A. Yes. Schedule JRW-2-R, attached to this testimony, compares the net revenue requirement
10 impact of adopting either Staff’s proposed 5-year amortization period or MIEC’s proposed
11 3-year amortization period for unprotected EADIT (page 1) to the impact of adopting the
12 Company’s proposal to amortize plant related unprotected EADIT over a period
13 proportional to that produced by the average rate assumption method (“ARAM”), and non-
14 plant related unprotected EADIT over a period of 20 years. To illustrate the impact that a
15 shorter amortization period than that produced by ARAM would have on the customer rates
16 over the life of the underlying property, Schedule JRW-2-R also shows the effect of using
17 10-year (Page 2) and 20-year (Page 3) amortization periods for the Company’s unprotected
18 EADIT.

19 **Q. How do you respond to the proposals of MIEC and Staff to amortize unprotected**
20 **EADIT over three years and five years, respectively?**

21 A. Mr. Meyer and Ms. Bolin completely ignore several adverse effects that such accelerated
22 amortization will have on customers and rates after the unprotected EADIT is exhausted.

1 Use of a shorter amortization period would create inter-generational inequity by severing
2 the amortization of unprotected EADIT balances from the related investment and the
3 funding of that investment by customers. Proposals to use a shorter life, if adopted, would
4 distribute a tax benefit to customers in a manner that is disproportionate to the cost and risk
5 that customer bears in taking service, and thus benefits customers during the abbreviated
6 amortization period to the detriment of customers who continue to pay for these
7 investments over the property's remaining useful life. Moreover, as shown on Schedule
8 JRW-2-R and discussed below, proposals to amortize EADIT over an abbreviated time
9 frame such as 3 years or 5 years would result in a substantial rate increase after the
10 unprotected plant-related EADIT is fully normalized. In contrast, and as illustrated, the use
11 of ARAM will add to the stability of cost of service rates over the useful life of the property.

12 **Q. How does the use of ARAM for this purpose address these issues?**

13 A. First, as I explained in my direct testimony, using ARAM to normalize all EADIT related
14 to plant in service (both protected and unprotected) justly promotes inter-generational
15 equity. All of the plant-related EADIT are unrealized permanent tax benefits that accrued
16 as a result of the Company making investments in plant in service and claiming tax
17 deductions in excess of book at a time when the federal corporate income tax rate was 35%,
18 that will be realized as they reverse at a rate that is currently assumed to be 21%. However,
19 as a result of the TCJA, we expect the tax benefits to reverse as book depreciation is
20 recovered as a cost from customers when the tax rate will be 21%. These unrealized
21 permanent benefits, which relate to the deduction of costs not yet recovered in rates from
22 customers, should be returned equitably to those same customers who will be required to
23 pay the costs of the plant to which the tax benefits relate as those tax benefits are realized.

1 The use of ARAM as proposed by the Company closely aligns the normalization of these
2 tax benefits to the investments that gave rise to the tax benefits, and thus to the customers
3 who will bear the costs of those investments over the investments' lives. Second, as I also
4 explained in my direct testimony, the use of ARAM reduces the total cost of capital
5 recovered from customers over the underlying useful life of the plant in service investment.

6 **Q. Please explain further how using ARAM to normalize EADIT promotes inter-**
7 **generational equity.**

8 A. A normalization method of accounting such as ARAM prevents the inter-generational
9 inequity that can occur when an alternative method flows-through the tax benefit to
10 customers over a shorter period of time than is used to recover the investment that gave
11 rise to the tax benefit. If MAWC uses an immediate or close-to-immediate flow-through
12 method of accounting for unprotected EADIT amortization, current customers receive the
13 entire tax benefit disproportionately. As I explained in my direct testimony, this occurs even
14 if tax rates change again before the timing difference reverses. For example, assume an
15 EADIT balance has been generated with respect to the tax benefits associated with an asset
16 with a book depreciation life of 35 years. If a shorter flow-through method is used for the
17 EADIT, customers who take service during the flow-through period realize 100% of the
18 benefit from the TCJA, whereas the customers paying for the asset during the remainder
19 of its life realize none of the benefit. The asset giving rise to the benefit, however, will
20 serve all of them. What is also inequitable for those later customers is the accelerated
21 increase in rate base. The entirety of the EADIT will have already been returned over the
22 flow-through period, resulting in a larger rate base and thus a greater revenue requirement
23 for the remainder of the life of the asset giving rise to the benefit. Future customers are

1 unfairly penalized, and doubly so, because they may not receive any refund, and yet pay
2 for the cost of the utility asset over its remaining useful life. Even worse, if tax rates are
3 raised in the future, future generations will have to pay for the deficient ADIT because any
4 prior excess will have been refunded to prior customers. Normalization ensures that tax
5 benefits are spread to all customers who benefit from the Company's long-lived assets and
6 not just current customers. MAWC therefore believes that the normalization concept
7 should be applied to all plant-related EADIT and its amortization should be calculated
8 pursuant to ARAM without regard to its status as protected or unprotected.

9 **Q. Have you estimated the impact on customers and rates if Staff's 5 year or MIEC's 3-**
10 **year amortization period were to be adopted?**

11 A. Yes. As demonstrated on Schedule JRW-2-R (page 2), if the five year amortization period
12 were adopted, MAWC customers would end up paying over \$115.2 million more over the
13 life of the assets that gave rise to the unprotected plant-related EADIT than they would if
14 the EADIT were normalized pursuant to ARAM. Schedule JRW-2-R (Page 2) also
15 demonstrates the significant increase in customer revenue requirement that occurs in year
16 6 when the unprotected EADIT amortization ends. Schedule JRW-2-R further shows for
17 comparison purposes the impact on revenue requirement if unprotected EADIT were
18 amortized over 3-year (page 1), 10-year (page 3), and 20-year (page 4) periods.

19 **Q. Do you see any issues with Mr. Meyer's proposal (page 31, starting on line 3) that**
20 **some form of accounting mechanism be in place to true-up for the impact on rate base**
21 **related to the amortization of EADIT in periods subsequent to the historic test year?**

22 A. No, the Company does not disagree with the use of an accounting mechanism to address a
23 true up of rate base, but it should cover all of the following and not just be limited to a rate

1 base adjustment related to protected EADIT: (1) over or under amortizations of both
2 protected and unprotected EADIT; (2) change in revenue requirement driven by the change
3 in rate base due to the amortization of both protected and unprotected plant related EADT;
4 and (3) change in both protected and unprotected EADIT balances resulting from a change
5 in tax law or audit by the IRS.

6 **Q. Does this conclude your Rebuttal Testimony?**

7 A. Yes, it does.
