7 Q. Please state your name and business address.

8 A. Stephen M. Rackers, 1845 Borman Court, Suite 101, St. Louis, Missouri
9 63146.

10 Q. By whom are you employed and in what capacity?

11 A. I am a Regulatory Auditor V with the Auditing Department in the St. Louis
12 office for the Missouri Public Service Commission (Commission).

13 Q. Please describe your educational background.

14 A. I graduated from the University of Missouri-Columbia, in 1978, with a
15 Bachelor of Science degree in Business Administration, majoring in Accounting.

16 Q. What has been the nature of your duties while in the employ of this
17 Commission?

18 A. I have supervised and assisted in audits and examinations of the books and
19 records of public utility companies operating within the State of Missouri. I have listed cases
20 in which I previously filed testimony on Schedule 1.

21 Q. With reference to Case No. WR-2003-0500, have you made an examination of
22 the books and records of Missouri-American Water Company (MAWC or Company)?

1 A. Yes, in conjunction with other members of the Commission's Staff (Staff). I
2 specifically examined information provided by the Company in response to Staff's data
3 requests, portions of the Company's general ledger, as well as workpapers supplied by
4 MAWC to support its rate case filing. I also examined Board of Directors Meeting Minutes,
5 Annual Reports to Shareholders and other information contained on the Company's Website.

6 Q. What is your primary responsibility in this case?

7 A. My primary areas of responsibility in this case are acquisition adjustments,
8 acquisition transaction costs, Accounting Authority Orders (AAOs), depreciation expense,
9 recovery of the "old" St. Joseph Treatment Plant (SJTP) undepreciated balance and
10 disallowance of plant capacity related to the "new" SJTP.

11 Q. What knowledge, skill, experience, training or education do you have in these
12 matters?

13 A. I have acquired general knowledge of these topics through my experience and
14 analyses in prior rate cases and merger cases before this Commission. I have also acquired
15 knowledge of these topics through review of Staff workpapers for prior rate cases brought
16 before this Commission relating to MAWC and its newly acquired operating districts
17 (i.e., Jefferson City Waterworks Company (Jefferson City) and St. Louis County Water
18 Company (County Water)). I have also reviewed prior Commission decisions with regard to
19 these areas. I have reviewed the Company's testimony, workpapers and responses to Staff's
20 data requests addressing these topics. In addition, my college coursework included
21 accounting and auditing classes. Finally, I successfully passed the Certified Public
22 Accountants Exam, which included sections on accounting practice and theory, as well as,
23 auditing. I currently hold a license to practice in Missouri.

1 Q. What is the purpose of your testimony?

2 A. My testimony will sponsor and explain the following adjustments and amounts
3 appearing in Staff's Schedules:

4 New St. Joseph Treatment Plant Disallowances P-31.1 and R-31.1

5 Elimination of Transaction Costs P-1.1, S-11.2 and S-14.2

6 Depreciation on Contributed Capital S-15.3 and R-59.1

7 Amortization of the Security AAO S-16.2

8 I am also sponsoring a portion of the contributions in aid of construction balance and
9 the deferred income tax balance in Staff Accounting Schedule 2 – Rate Base.

10 Q. What are the results of the Staff's audit of MAWC?

11 A. Based on the Staff's audit, the Company's current earnings are excessive. The
12 Staff's determination of revenue requirement indicates that the Company's current rates
13 produce a revenue excess of approximately \$20 million at the Staff's midpoint rate of return,
14 on a total company basis, after an allowance for true-up.

15 Q. Is the Staff filing a complaint?

16 A. Yes. In Case No. WC-2004-0168, the Staff is recommending that the
17 Commission reduce the Company's rates in the range of approximately \$19 to \$21 million on
18 a total company basis after an allowance for true-up.

19 Q. Why is the Staff filing a complaint case at this time?

20 A. The Staff believes that its determination of the excess earnings produced by the
21 Company's current rates will continue to be significant, even after a partial or complete
22 resolution of the issues during the prehearing conference. Also, in its Suspension Order And
23 Notice, effective June 8, 2003, the Commission authorized the Staff to file a complaint

1 seeking a reduction in the Company's revenues if its audit reflected that the Company's
2 earnings were excessive. Therefore, it is appropriate for the Staff to immediately file a
3 complaint case to address the Company's excess earnings in an expeditious manner.

4 **ACQUISITION ADJUSTMENTS**

5 Q. Has MAWC acquired the service area of other water systems since its last rate
6 case?

7 A. Yes. MAWC acquired the assets owned and the customers served by the
8 municipally owned water systems of Webster Groves, Florissant and Valley Park
9 (Municipalities). The Company also acquired the assets and customers served by United
10 Water Systems (United), in Jefferson City (Jefferson City).

11 Q. Did MAWC acquire these service areas at net book value, original cost of plant
12 in service less accumulated depreciation?

13 A. No. MAWC paid in excess of net book value and incurred positive acquisition
14 adjustments for Webster Groves, Florissant and Jefferson City. The Company paid less than
15 net book value and incurred a negative acquisition adjustment for Valley Park.

16 Q. Please explain the term "acquisition adjustment."

17 A. An acquisition adjustment is incurred when the assets of another utility are
18 purchased at a price above or below the net book value. If a utility pays an amount in excess
19 of net book value, it incurs a positive acquisition adjustment, or acquisition premium. If a
20 utility pays an amount below net book value, it incurs a negative acquisition adjustment, or
21 acquisition discount.

22 Q. Has the Commission historically recognized acquisition premiums or discounts
23 in the determination of rates?

1 A. No. The Commission has consistently rejected an increase in rates to recover
2 acquisition premiums or a reduction in rates to reflect an acquisition discount. Recognition of
3 acquisition premiums and discounts would be counter to the Commission's adherence to
4 recovery of only the original cost of the investments made by utilities that provide service to
5 ratepayers. Recognition of acquisition premiums and discounts would also be counter to the
6 Commission's historical position of allowing utility shareholders to retain any gains, or bear
7 any losses, associated with the sale of utility property. The Commission has consistently
8 recognized that any deviation from original cost, associated with transactions engaged in by
9 utility companies, is the responsibility of the shareholders.

10 Q. Is the Staff opposed to the inclusion of acquisition adjustments in the
11 determination of revenue requirements for establishing rates in this case?

12 A. Yes. The Staff advocates that the Commission adhere to its traditional practice
13 of using only the original cost of the plant in service net of the associated accumulated
14 depreciation reserve in the determination of rates.

15 Q. Did the Commission have jurisdiction over the purchase of the Municipalities?

16 A. No. The Commission was not required to approve, and MAWC did not seek
17 approval of, the purchases of the municipal systems. Since the Commission had no
18 jurisdiction over the purchase transaction, it did not approve the purchase or have control over
19 any premium or discount that was incurred by MAWC for the municipal systems. It is
20 inappropriate to attempt to recover acquisition adjustments that result from a business
21 transaction over which the Commission has no jurisdiction.

22 Q. Does an acquisition adjustment represent a new investment in or a reduction in
23 the value of utility assets?

1 A. No. There is no new investment in plant or reduction in the value of the assets
2 serving ratepayers. The same assets will be serving the same customers.

3 Q. What kind of costs do acquisition costs represent?

4 A. Acquisition adjustments, like transaction costs, which are discussed later in my
5 testimony, are ownership costs. The decisions about whether to engage in the transaction and
6 the amount to be paid were made by the owners of MAWC, United and officials representing
7 the Municipalities. The transactions would not have taken place without the approval of these
8 individuals. Ratepayers, as customers, have no ownership rights in utility assets, no vote in
9 the decision to be part of a purchase and no influence in the structure of the terms and
10 conditions of the purchase. Therefore, these costs should not be directly reflected in the
11 Company's utility rates, which are borne by MAWC's customers.

12 **TRANSACTION COSTS**

13 Q. What are the "transaction costs" you are discussing in this testimony?

14 A. The Company incurred costs to complete the purchases of the Municipalities.
15 These costs include a study to determine the original cost of the plant purchased, a study to
16 analyze the financial condition of the system purchased and costs associated with informing
17 the customers of the change in ownership.

18 Q. How did the Company account for these costs?

19 A. The costs were incurred in 2001 and 2002. MAWC expensed a portion of the
20 costs and capitalized the remaining amounts.

21 Q. What treatment is the Staff proposing for these amounts?

22 A. The Staff is proposing no recovery of the transaction costs. Transaction costs
23 are those costs necessary to complete the purchase or merger transaction. They include a

1 variety of expenses, such as legal fees, consulting fees and the cost of informing customers of
2 the change in ownership. Transaction costs are not related to providing utility service more
3 efficiently, but are only incurred to protect the financial interests of the shareholders.

4 These are ownership expenditures incurred in consummation of the purchase. The
5 Staff believes these ownership costs should be borne by the shareholders. Transaction costs
6 are not necessary to provide safe and adequate service. These costs do not achieve
7 efficiencies and/or reduce operating costs. These costs are involved in consummating the
8 purchase and changing the identity of the owner rather than creating a more efficient
9 operating entity. The Staff believes these costs should stay with the owners of the Company
10 and be excluded from the cost of service.

11 Q. Has the Company experienced recovery of the acquisition adjustments and
12 transaction costs?

13 A. Yes. MAWC has received recovery of both the acquisition adjustments and
14 the transaction costs. MAWC previously served the Municipalities through wholesale tariffs.
15 Following the purchase, MAWC experienced an increase in the revenues received as a result
16 of collecting retail rate revenues from the individual customers instead of wholesale rates
17 from the Municipalities. In its response to Staff Data Request No. 418, the Company
18 provided the annual difference in revenue that will be realized by serving the Municipalities
19 through retail rates for individual customers as opposed to wholesale rates. Based on this
20 data, from the date of the purchase until the date rates will change as a result of this case, the
21 Company will realize \$4,613,345 of additional revenues from Florissant, \$3,313,671 from
22 Webster Groves and \$522,778 from Valley Park.

1 With regard to the purchase of Jefferson City, the Company also experienced recovery
2 of the acquisition adjustment and transaction costs. Just prior to the purchase of Jefferson
3 City, the Commission approved a substantial increase in rates. The net income generated by
4 the Jefferson City system, including the effects of the rate increase, was passed on to MAWC
5 following the purchase. In response to Staff Data Request No. 168, the Company identified a
6 reduction of over \$500,000 in payroll costs that was achieved as a result of the purchase of the
7 Jefferson City system. These payroll costs were included in the rates established by the
8 Commission just prior to the purchase, and continue to be paid by ratepayers today. MAWC
9 has enjoyed these savings since the purchase and will continue to keep this benefit until
10 April 2004, when rates are changed as a result of the current case. These savings provide
11 recovery of acquisition adjustments and transaction costs. From the date of purchase until the
12 date rates from this case become effective, MAWC will realize \$1,237,132 of payroll cost
13 savings.

14 In total, MAWC will realize over \$9.5 million in additional revenues and expense
15 savings. The total transaction costs and acquisition adjustments associated with the
16 Municipalities and Jefferson City is \$7,934,245. Therefore, the Company has completely
17 recovered the transaction costs and acquisition adjustments related to these purchases.

18 **DEPRECIATION**

19 Q. Please explain this section of your testimony.

20 A. This section of my testimony will discuss the following two depreciation-
21 related topics:

1 1) The affect of the Infrastructure System Replacement Surcharge (ISRS)
2 for the County Water service area (now part of MAWC) on the determination of
3 depreciation rates in this case; and

4 2) The regulatory treatment that should be afforded the depreciation fund
5 ordered by the Commission in the last County Water rate case, Case
6 No. WR-2000-844.

7 Q. In the last County Water rate case, did the Commission accept the Staff's
8 treatment of cost of removal and salvage?

9 A. No. In Case No. WR-2000-844, the Commission accepted the Company's
10 method of including estimated cost of removal and salvage in the determination of
11 depreciation rates and ordered an increase in depreciation expense to provide cash flow to
12 address the Company's infrastructure problems. In its Order the Commission stated:

13 The Commission's decision on this issue is guided by policy. There is
14 ample factual support to allow the Commission to choose either Staff's
15 approach or the Company's. Under the circumstances faced by the
16 Company, including its need for cash flow to address its infrastructure
17 issues, the Commission concludes that using the whole life method and
18 including estimated net salvage is in the public interest. The whole life
19 method collects net salvage cost ratably over the life of plant by
20 customers served by the plant. This approach is equitable based on the
21 circumstances of this case. The Commission's conclusion about the use
22 of the whole life method should not be taken as a final endorsement of
23 it, nor as a condemnation of Staff's approach. Both have merit, and the
24 Commission will use the one that fits the particular circumstances
25 under investigation. The Commission explicitly distinguishes its
26 holding on the net salvage issue here from its holding in Laclede Gas
27 Company's recent rate case, Case No. GR-99-315. The Commission's
28 holding that the Company's use of the whole life method of
29 determining depreciation rates is based on the record in this case, and
30 on the circumstances in which the Company finds itself.

31 Q. Have the circumstances that guided the Commission's decision in the last
32 County Water rate case changed?

1 A. Yes. Recently, the Missouri Legislature passed a law allowing MAWC to
2 impose a surcharge to recover costs related to infrastructure system replacement of
3 plant (ISRS), in its County Water service area, outside the context of a rate case. This
4 mechanism allows MAWC to address the circumstances that guided the Commission's
5 decision in the last County Water rate case. This mechanism also allows MAWC to recover
6 the costs of facility relocations through the surcharge.

7 Q. How does the ISRS address infrastructure replacement?

8 A. The Company no longer needs to file a rate case, and wait 11 months to start
9 recovering the costs related to infrastructure plant replacements, as well as facility relocations.
10 A surcharge can be filed and become effective in 120 days. This mechanism promptly
11 provides recovery of the cost associated with infrastructure plant replacements and facility
12 relocations and also provides cash flow to address future construction needs.

13 Q. Please explain your reference to the depreciation fund ordered by the
14 Commission in the last County water rate case.

15 A. In Case No. WR-2000-844, the Commission ordered County Water to set aside
16 a portion of the additional depreciation expense recoveries in a depreciation fund that could
17 only be used for infrastructure plant replacements. The Commission's Order was later
18 clarified, as part of MAWC's Circuit Court appeal, to require the Company to either set aside
19 in a depreciation fund, or spend, \$4,809,134 annually for infrastructure plant replacement.
20 The Company has collected the amounts which are to be set aside in the depreciation fund and
21 has spent \$4,809,134 annually for infrastructure plant replacement.

22 Q. How does the Staff propose to treat the amounts associated with the
23 depreciation fund?

1 A. In the Staff's opinion, the Commission provided, through additional
2 depreciation expense, cash to address MAWC's infrastructure replacement problems in its
3 County Water service area. This up-front provision of cash is similar to a contribution in aid
4 of construction (CIAC) and should be treated, like CIAC, as a reduction to the rate base and
5 an offset to the net plant in service. The Uniform System of Accounts for Water Utilities
6 provides for the accumulation of contributed capital to offset construction costs in
7 Account 271, Contribution in Aid of Construction. Since CIAC provides cash to the utility to
8 fund construction, it is included in rate base as an offset to the plant in service and results in
9 less return on investment. The CIAC is also amortized as an offset to the depreciation
10 expense of the plant it funded.

11 Q. How has the Staff computed the CIAC associated with infrastructure plant
12 replacements?

13 A. The Staff has used the amount the Commission ordered to be set aside, in a
14 depreciation fund, as the annual amount of CIAC. The Staff included this CIAC in rate base
15 as a reduction to the net plant in service, and amortized it as an offset to the depreciation
16 expense computed on the \$4,809,134 of annual infrastructure plant replacements. I have
17 multiplied the \$4,809,134 by 2.13 years, the length of time the rates from Case
18 No. WR-2000-844 have been in effect through the Staff's June 30, 2003 update to compute
19 the CIAC balance, \$10,250,704. Because the Company has booked the amount associated
20 with the depreciation fund to the accumulated depreciation reserve, I have made an
21 adjustment to reduce the reserve, R-59-1, by the amount of the CIAC balance. The annual
22 amortization of this accumulated CIAC, \$171,187, was used as an offset to the annual
23 depreciation expense plant on infrastructure plant replacements through adjustment S-15.3.

SECURITY ACCOUNTING AUTHORITY ORDER (AAO)

Q. Please describe the Security AAO.

A. In Case No. WO-2002-273, the Commission approved the deferral of costs related to the improvement and enhancement of security at MAWC's facilities. The Company was allowed to accumulate the deferral for two years following the terror attacks of September 11, 2001. The Company has deferred various one-time security costs, the depreciation and carrying cost associated with security-related construction projects and the legal cost associated with the case that led to the establishment of the AAO.

Q. Is the Staff proposing recovery of all the cost deferred by MAWC?

A. No. The Staff opposes the recovery of the deferred legal costs and a portion of the carrying costs.

Q. Please explain the Staff's opposition to the inclusion of the legal expenses associated with Case No. WO-2002-273.

A. Ordered Item 5 of the Commission's Report And Order in Case No. WO-2002-273 states, "That Missouri-American Water Company is hereby granted authority to defer and book to Account 186 expenditures relating to security improvements and enhancements beginning September 11, 2001, and continuing through September 11, 2003." The legal costs associated with processing Case No. WO-2002-273 are not expenditures for security improvements or enhancements to MAWC's facilities and should not be included in the deferral.

Q. To the best of your knowledge, have the costs of processing an AAO case ever been included in an AAO deferral?

A. No. The costs included in the deferral are those costs specifically incurred to address the purpose of the AAO. For instance, an application by County Water for an AAO

1 to defer costs related to infrastructure replacement was the subject of Case No. WO-98-223.
2 The costs associated with processing that case were not included in the deferred cost that the
3 Company sought to recover.

4 Q. Why is the Staff proposing to disallow a portion of the carrying cost associated
5 with the Security AAO?

6 A. The Company has calculated carrying cost using the allowance for funds used
7 during construction (AFUDC) rates. Staff Witness Lisa K. Hanneken has recommended a
8 change in the methodology the Company uses to calculate AFUDC rates. This same
9 methodology, which utilizes short-term debt as the primary funding source for construction,
10 should also be used to calculate the carrying costs associated with the deferral of security
11 costs.

12 Q. What regulatory treatment is the Staff recommending for the Security AAO
13 deferred costs it is proposing to allow?

14 A. The Staff is proposing to amortize the deferred security costs over a 10-year
15 period, with no rate base inclusion of the unamortized deferred balance. The Staff is
16 proposing this treatment, which was first prescribed by the Commission in its Order in Case
17 No. GR-98-140 involving Missouri Gas Energy's (MGE's) service line replacement deferrals.

18 In that case, the Commission approved:

- 19 1) A 10-year amortization of the deferrals;
- 20 2) No inclusion of the unamortized balance in rate base; and
- 21 3) Inclusion of a rate base reduction for the associated deferred taxes.

22 The Commission deemed it proper for the ratepayers and shareholders to share the
23 effect of regulatory lag by allowing the Company to earn a return of, but not a return on, the

1 deferred balance. The Staff believes this regulatory treatment, which has been accepted by
2 the Commission for other AAOs, should be used as the method for recovery of the security
3 deferrals.

4 **INFRASTRUCTURE REPLACEMENT AAO**

5 Q. Please describe the Infrastructure AAOs.

6 A. In Case Nos. WR-95-145 and WR-96-263, the Commission approved the
7 deferral of costs related to infrastructure replacement.

8 Q. What regulatory treatment is the Staff recommending for the Infrastructure
9 Replacement AAOs?

10 A. The Staff is proposing the same treatment it is recommending for the Security
11 AAO discussed above:

- 12 1) A 10-year amortization of the deferrals;
13 2) No inclusion of the unamortized balance in rate base; and
14 3) Inclusion of a rate base reduction for the associated deferred taxes.

15 **OLD ST. JOSEPH TREATMENT PLANT**

16 Q. Has the Staff included any recovery of the undepreciated balance associated
17 with the old SJTP in its determination of revenue requirement?

18 A. No.

19 Q. Has the Commission made a ruling regarding the undepreciated balance
20 associated with the old SJTP in a previous rate case?

21 A. Yes. In Case No. WR-2000-281, the Commission denied any recovery of the
22 undepreciated balance of the old SJTP.

1 Q. What is the Staff's position regarding this issue?

2 A. I have been advised by Counsel that this matter is the subject of a continued
3 court appeal process of a prior Commission Order and is, therefore, inappropriate for
4 inclusion in this case.

5 **NEW ST. JOSEPH PLANT DISALLOWANCES**

6 Q. Please discuss the adjustments for plant disallowances and the associated
7 accumulated depreciation for the new SJTP.

8 A. In Case No. WR-2000-281, the Commission made the following finding
9 regarding the Staff's proposed adjustment to the cost of the new SJTP included in rate base:

10 The Commission concludes that the method proposed by Staff is the
11 better method, because not all items included in rate base are equally
12 susceptible to a straight-line, percentage reduction for excess capacity.
13 The amount of \$2,271,756 shall be deducted from the value of the new
14 St. Joseph plant included in rate base.

However, the Company did make this adjustment to its books and records. As a
result, depreciation expense has accumulated on this portion of the plant since April of 2001.

15 Q. Is the Staff recommending an adjustment to the value of the new SJTP in this
16 case?

17 A. Yes. Staff witness James A. Merciel, Jr. is again sponsoring the Staff's
18 recommendation to deduct \$2,271,756 from the value of the new SJTP included in rates. I am
19 sponsoring Adjustment P-31.1 to reflect Staff witness Merciel's recommendation for the
20 disallowance of plant in the Accounting Schedules.

21 Since the Staff is not recognizing this portion of the new St. Joseph Treatment Plant in
22 its determination of revenue requirement, any associated accumulated depreciation must also

1 be deducted from the depreciation reserve. Adjustment R-31.1 eliminates the accumulated
2 depreciation associated with the Staff's adjustment to the cost of the new SJTP.

3 Q. Does this conclude your direct testimony?

4 A. Yes.
