CenturyTel Carrier Relations
Attn: Joey Bales
100 CenturyTel Drive
Monroe, LA 71203

Dear Mr. Bales:

When our mediation in Case No. TC-2008-2005 ended, Socket reviewed the interconnection traffic volumes for the traffic being exchanged between Socket and CenturyTel of Missouri, LLC ("CenturyTel"). Socket did this using its methodology, which counts actual traffic. This is the same methodology that we previously discussed with CenturyTel representatives.

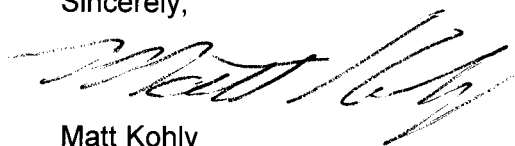

According to our review, the volume of traffic actually exchanged between Socket and CenturyTel exceeds the applicable Point of Interconnection (POI) thresholds in four exchanges. Therefore, Socket is obligated to establish additional POIs in the following exchanges:

Bland
Jonesburg
Marthasville
Summersville

Consistent with its obligations, Socket requests to establish additional POIs in each of the exchanges using dedicated interconnection facilities leased from CenturyTel. As this will require Socket to order new facilities and both parties to coordinate migrating traffic onto those new facilities, Socket requests that this be made a network project. Socket also requests that we meet via conference call to begin this process.

Please let me know your availability for a call next week so that we may begin this process. You can reach me at 573.777.1991, ext. 551 or via e-mail at rmkohly@sockettelecom.com.

Sincerely,

Matt Kohly
