Re: Access Traffic Terminating over Local Trunks – Missouri

Dear Mr. Bales:

In response to your June 17, 2008 letter, Socket reviewed the routing in our switch located in St. Louis and determined there were two issues that caused intraLATA interexchange traffic to be inadvertently routed with a CIC code and interLATA interexchange traffic to be inadvertently routed over the LEC-to-LEC network. As of July 2, 2008, these issues have been corrected. No interexchange traffic is being routed over the LEC-to-LEC network.

Your June 17, 2008 letter indicates that CenturyTel will calculate the amount proposed to be back-billed. Please send any invoices and associated call records to my attention. If we can be of any assistance, please let me know

Sincerely,

Matt Kohly  
Socket Telecom, LLC
