TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the PSC. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of various suspension periods, deferrals, etc. the PSC follows in their tariff approval process, the most current page number on file with the Commission is not always the tariff page in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

2.
2.1.
2.1.1.
2.1.1.A.
2.1.1.A.1.
2.1.1.A.1.(a).
2.1.1.A.1.(a).I.
2.1.1.A.1.(a).I.(i).

3.7 Operator Services (Cont'd.)

3.7.3 Operator services to privately owned payphones.

3.8 Timing of Calls

The customer's long distance usage charge is based on the actual usage of TransWorld Network's network. Usage begins when the called party picks up the receiver. When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. A call is terminated when either party hangs up.

3.9 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate center involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in their NPA-NXX V & H Coordinates Tape and Bell's NECA Tariff No. 4.

FORMULA:

$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

EXAMPLE: Distance between Miami and New York City -

| | <u>V</u> | <u>H</u> |
|------------|----------|----------|
| Miami | 8,351 | 529 |
| New York | 4,997 | 1,408 |
| Difference | 3,354 | -879 |

Square and add: $11,249,316 + 772,641 = 12,021,957$

Divide by 10 and round: $12,021,957 / 10 = 1,202,195.70$
