RATE DESIGN: WATER OPERATIONS.....2

RATE DESIGN SEWER OPERATIONS.....6

MISCELLANEOUS SERVICE CHARGES.....8

SUMMARY9

1 **RATE DESIGN: WATER OPERATIONS**

2 Q. What is the purpose of Staff's rate design?

3 A. The purpose is to design rates that will be utilized to collect the appropriate
4 levels of revenue from each service territory and from each customer class based upon the
5 revenue requirement. Staff's rate design for Confluence's water operations is based on the
6 actual revenue requirement for each district. The rate structure that is utilized generally consists
7 of a fixed monthly customer charge and a commodity (usage) charge. The customer charge is
8 generally developed by comparing certain costs that are generally considered fixed,¹ and used
9 primarily to serve a particular customer (such as meters and service lines), and the number of
10 customers in each class. Commodity charges are generally composed of costs that vary with
11 water production, such as pumping, chemical use, etc. Staff's results of proposed reasonable
12 rates are provided in Attachments 1 – 7, attached to this testimony. It should be noted that a
13 number of customers are currently on flat rates for water, which means they pay a single
14 customer charge, and all costs are recovered via a fixed monthly charge. These flat rate
15 customers are in remote areas that do not yet have meters installed.

16 Q. Generally, Staff undertakes a class cost of service study to help guide its rate
17 design recommendations in large rate cases. Did Staff conduct a Class Cost of Service
18 ("CCOS") study in this proceeding?

19 A. No. Most of the systems that Confluence operates are small, distinct systems
20 that generally only serve residential customers. As such, there is no need to undertake further
21 analysis to separate costs among classes. Any larger customers that are connected to the
22 system generally have a larger meter, such as a 1-2" or larger in diameter meter, compared to

¹ Confluence has several water systems that have a flat monthly customer charge.

1 the standard 5/8" or 3/4" meter of a residential customer, and are charged based on that larger
2 meter size.

3 Q. What is Confluence's current water rate design structure?

4 A. Confluence currently has approximately 20 different customer charges for its
5 water utility systems ranging from \$13.23 to \$71.25. This is largely because of Confluence's
6 rapid acquisition of small systems over the past several years, and adoption of the acquired
7 systems existing rates. Further, as noted above, not all water systems have meters. For those
8 that do, there is an additional commodity charge per 1,000 gallons of water used, with the
9 exception of Port Perry. Port Perry's rate includes 2,000 gallons of water with the customer
10 charge, and a commodity charge that applies to usage above this amount.

11 Q. How did Staff design its proposed rates?

12 A. Staff proposes a single-block rate structure for all Confluence customers that
13 have meters in place. A single-block rate structure is one in which the commodity rate is
14 constant regardless of the volumes used. Staff is also proposing that all metered customers have
15 a monthly customer charge and commodity rate for usage, rather than a minimum amount of
16 water usage included in the customer charge, as Port Perry rates currently have. Confluence's
17 customers are almost entirely residential, and the few commercial customers' consumption is
18 not significantly different from the residential customers' consumption. Therefore, Staff did
19 not conduct a CCOS study or establish separate customer classes. Finally, Staff proposes a flat
20 monthly rate for residential customers that do not yet have meters.

21 Q. Is Staff proposing any consolidation of water rates among Confluence's
22 districts?

1 A. Yes, Staff is proposing consolidation into three (3) rate districts as shown in
2 Attachments 1 – 3, attached to this testimony. Staff recommends the Commission order three
3 (3) rate districts as follows:

- 4 • Water District #1 – Cedar Green, Fawn Lake, Missing Well, Spring Branch,
5 Branson Cedars, Prairie Heights, and Glen Meadows;
- 6 • Water District #2 – Hillcrest Manor, Elm Hills, and Port Perry; and,
- 7 • Water District #3 – Osage Utilities, Terre Du Lac, and Indian Hills; Confluence
8 Rivers (which consists of Auburn Lakes, Calvey Brooks, Eugene, Evergreen
9 Lakes, Gladlo, Majestic Lakes, Roy-L, Smithview, and Willows).

10 Q. What is a rate district?

11 A. For the purposes of this rate design, a rate district means all of the customers
12 within a district will have the same rate, based on their meter size.

13 Q. Why did Staff choose these groupings?

14 A. Staff has chosen these groupings with an attempt to keep systems with a similar
15 cost of service in the same district, achieve reasonable rates, and mitigate rate shock.

16 Q. Please explain why having multiple districts is more beneficial than single-tariff
17 rates.

18 A. There are several reasons why having multiple districts is beneficial. The
19 primary benefit to having multiple districts in this proceeding is to spread out the costs of
20 investment without causing customers who did not receive the same level of investment in their
21 systems to experience unnecessary and substantial rate increases. All water systems will
22 eventually need significant investment of some kind. Confluence, in particular, has purchased
23 several systems that require upgrades, though not all upgrades have been completed. Keeping
24 the systems that have had recent investments and have very few customers as stand-alone
25 systems could result in very high rates, as there are so few customers upon which to spread this

1 cost recovery. For example, Prairie Heights' current customer charge is \$20.00 per month, and
2 would increase to \$107.50 per month if it were not consolidated with other systems. By
3 consolidating Prairie Heights with other systems, the customer charge will only increase to
4 \$58.57, helping to mitigate rate shock. Combining these small systems into districts with larger
5 systems mitigates this potential rate shock. Further, those systems with lower cost of service
6 are not subject to unnecessary increases in rates. Some of the systems that have already had a
7 previous rate case after upgrades, and therefore already have very high rates, will receive a
8 decrease in rates under Staff's proposal. It is Staff's position that these rate districts result in
9 the most reasonable rates for the customers.

10 Q. For those systems that have unmetered customers, how are flat monthly rates
11 calculated?

12 A. There are a couple of different ways to calculate flat rates for unmetered
13 customers. For example, the simplest way is to divide the total cost of service by the number
14 of customers receiving service from that system if every customer in that system is unmetered.
15 However, Staff utilized a different method when calculating flat rates for unmetered customers,
16 because each district proposed by Staff has a mixture of metered and unmetered customers.
17 Staff has calculated flat rates for unmetered customers by applying a factor ranging from 1.62 to
18 1.89 (depending on the district), against the number of unmetered customers in the district to
19 calculate the customer equivalent. This factor is then multiplied by the customer charge, which
20 was calculated by dividing the customer charge portion of the cost of service by the total number
21 of customer equivalents.

22 Q. Why did Staff utilize a different factor for each district when calculating the
23 flat rate?

1 A. The goal when establishing flat rates in these situations is to have the resulting
2 rate mimic the expected average bill that a metered customer would pay. Because the customer
3 and commodity charges vary among the districts, utilizing a single factor for all flat rate
4 customers among all of the districts would not mathematically result in flat rates that
5 approximate a metered customer's monthly bill. Utilizing a factor of 1.89 for Staff's proposed
6 District #1, develops a flat rate that mimics the expected average bill that a metered customer
7 would pay in District #1. Utilizing a factor of 1.62 for Staff's proposed District #2, develops a
8 flat rate that mimics the expected average bill that a metered customer would pay in District #2.
9 Utilizing a factor of 1.67 in Staff's proposed District #3, develops a flat rate that mimics the
10 expected average bill that a metered customer would pay in District #3. By utilizing the factor
11 chosen for each individual district, the bills an unmetered customer pays compared to what a
12 metered customer pays, based on the assumption of 5,000 gallons of usage per month, should
13 be similar.

14 Q. In his Direct Testimony, Staff witness Curt B. Gateley described problems with
15 the quality of Confluence's water sales data. Did this affect Staff's rate design?

16 A. Yes. Due to the quality of Confluence's water sales data, Staff has utilized an
17 estimate of 5,000 gallons per customer per month.

18 Q. Why did Staff choose 5,000 gallons per month?

19 A. Staff used this number based on its experience with customer usage among the
20 various water systems in the state. It is Staff's position that this is a reasonable assumption of
21 water usage.

22 **RATE DESIGN: SEWER OPERATIONS**

23 Q. How did Staff develop rates for sewer operations?

1 A. Confluence’s sewer operations are relatively small and generally consist of only
2 residential customers. Staff based its rates for Confluence’s sewer operations on both the results
3 of Staff’s audit and the development of COS for Confluence’s sewer operations, based on the
4 Water, Sewer, & Steam Department’s small company rate design method.

5 Q. What is Confluence’s current sewer rate design structure?

6 A. Confluence currently has several different flat rate charges for its sewer utility
7 systems ranging from \$16.67 for a residential customer to \$99.88 per month. Similar to
8 Confluence’s water systems, this is largely because of Confluence’s rapid acquisition of small
9 systems over the past several years, and adoption of the acquired systems existing rates.

10 Q. Is Staff proposing any consolidation of sewer rates?

11 A. Yes. Similar to Staff’s proposal regarding water rate design, Staff is proposing
12 consolidation into four (4) districts, as shown in Attachments 4 – 7, attached to this testimony.
13 Staff recommends the Commission order four (4) rate districts as follows:

- 14 • Sewer District A – Deer Run, Missing Well, Prairie Heights, DeGuire, Glen
15 Meadows, Freeman Hills, and Cedar Green;
- 16 • Sewer District B – Branson Cedars, Clemstone, and Hillcrest;
- 17 • Sewer District C – Port Perry, Osage Utilities, and Terre Du Lac; and,
- 18 • Sewer District D – Raccoon Creek, Confluence Rivers, and Elm Hills.

19 Q. Please explain why having multiple districts is more beneficial than single-tariff
20 rates.

21 A. As previously discussed with the water districts, the primary benefit to having
22 multiple districts in this proceeding is to spread out the costs of investment without causing
23 certain customers who did not receive the same level of investment to experience substantial
24 rate increases. It is beneficial to consolidate the sewer systems into districts in order to spread

1 costs amongst a larger customer base. Confluence has made significant investment in some of
2 the sewer systems, but eventually other systems will need a large capital investment.
3 By consolidating the sewer systems into districts, it will help smaller systems to mitigate rate
4 shock. For example, Freeman Hills currently has a customer charge of \$16.67 per month, but
5 the customer charge would increase to \$213.90 per month if Freeman Hills continued as a
6 stand-alone system and was not consolidated. By consolidating Freeman Hills with other
7 sewer systems, the customer charge will only increase to \$60.64 per month, helping to mitigate
8 rate shock.

9 **MISCELLANEOUS SERVICE CHARGES**

10 Q. What are Miscellaneous Service Charges?

11 A. Miscellaneous Service Charges are designed to recover the actual costs to the
12 company associated with performing the services listed, such as disconnecting or reconnecting
13 water service, that are caused by a particular customer.

14 Q. Why does Staff review the Miscellaneous Service Charges during each
15 rate case?

16 A. Miscellaneous Service Charges are intended to ensure that the cost-causer for
17 these infrequent, but recurring services bears the Company's actual cost of performing the
18 specific service. If adequate compensation is not obtained, then other ratepayers bear the
19 remaining costs through higher rates. If excessive compensation is obtained, it could contribute
20 to over earning by a company.

21 Q. Is Staff proposing any changes to Confluence's Miscellaneous Service Charges
22 in the effective tariffs?

1 A. Yes. Staff proposes the Commission order the same miscellaneous service
2 charges be utilized across all water systems and the same miscellaneous service charges be
3 utilized across all sewer systems. Staff proposes these charges be based on the costs to perform
4 the services, as described in Confluence's response to Staff Data Request No. 0250. Please see
5 Attachment 8, attached to this testimony for Staff's proposed charges.

6 Q. Why does Staff propose the same charges for all systems, rather than different
7 charges among the districts?

8 A. Confluence did not report differences in the cost to perform these services at
9 different systems. Generally, Confluence owns many systems in rural areas, scattered across a
10 large geographical area. Staff finds it reasonable that mobilization costs, travel time, and labor
11 for these activities would not vary significantly among the districts.

12 **SUMMARY**

13 Q. Can you please summarize Staff's position?

14 A. It is Staff's position that the rate design and cost of service calculations discussed
15 previously in this testimony correctly allocates the cost of providing water and sewer service to
16 the individual customers served within each specific district. It is Staff's position that the rates
17 calculated for water and sewer service provide a reasonable opportunity for Confluence to
18 recover the revenue requirement, while mitigating rate shock to the extent possible.

19 Q. Does this conclude your direct testimony?

20 A. Yes it does.

BEFORE THE PUBLIC SERVICE COMMISSION

OF THE STATE OF MISSOURI

In the Matter of Confluence Rivers Utility)
Operating Company, Inc.'s Request for) Case No. WR-2023-0006
Authority to Implement a General Rate)
Increase for Water Service and Sewer)
Service Provided in Missouri Service Areas)

AFFIDAVIT OF KERI ROTH

STATE OF MISSOURI)
) ss.
COUNTY OF COLE)

COMES NOW KERI ROTH and on her oath declares that she is of sound mind and lawful age; that she contributed to the foregoing *Direct Testimony of Keri Roth*; and that the same is true and correct according to her best knowledge and belief.

Further the Affiant sayeth not.

Educational, Employment Background and Credentials

I am currently a Senior Research/Data Analyst in the Water, Sewer and Steam Department, Industry Analysis Division for the Missouri Public Service Commission (Commission). I joined the Commission in August 2021. Prior to joining the Commission, I was employed by the State of Missouri – Office of the Public Counsel from September 2012 to August 2021 as a Senior Utility Regulatory Auditor.

I earned a Bachelor of Science degree in Accounting from Lincoln University in Jefferson City, MO in May 2011. In earning this degree I completed numerous core Accounting and business classes.

Summary of Case Testimony Filed

Utility	Case Number	Testimony Issues
Empire District Electric Company	ER-2012-0345	Rate Case Expense, 2007 Ice Storms Cost
