### Data Request

<b>Data Request No.</b>	0716
<b>Company Name</b>	Union Electric Company-Investor(Electric)
<b>Case/Tracking No.</b>	ER-2021-0240
<b>Date Requested</b>	7/23/2021
<b>Issue</b>	General Information & Miscellaneous - Other General Info & Misc.
<b>Requested From</b>	Geri Best
<b>Requested By</b>	Jeff Keevil
<b>Brief Description</b>	Identification of sources or repositories of data

**Description**

Part A. Please generally explain and describe each ledger, data system, map, accounting system, or other source or repository of data to which the company records information associated with the distribution system, distribution plant, or distribution characteristics, or relies upon for operation or accounting concerning the distribution system, distribution plant, or distribution characteristics. The response should include but not be limited to the General Ledger, the Continuing Property Record, the Customer Information System, the GIS system, and distribution operations or maintenance systems or ledgers. Nonexclusive example (1) are meter numbers included in the Customer Information System a number that can be found on a physical meter? Does the CIS system include information about the model, size, or operational characteristics of a meter or information that allows cross reference to another system containing that information? Nonexclusive example (2) What purpose do asset numbers visible on poles, transformers, and substation assets serve? Where are those numbers recorded, what other information is contained in that source or ledger, and what other systems may it be cross referenced with? Nonexclusive example (3) Where a customer has been financially responsible through application of the facilities extension tariff or similar tariff provision for some or all of the cost of plant additions, and/or retirements, and/or associated labor or other expenses or costs, what information is retained and in what form and for how long? Is the rate schedule of the originally requesting customer known and/or retained? Is the plant for which contribution was obtained identified in any manner in any source, system, or ledger? Part B. For each system, ledger, or other data repository, please describe what data concerning the distribution system is contained in that system, and how it is accessible, how it is internally organized, and what other systems or ledgers it may be cross-referenced with, either directly or indirectly. For each system, ledger, or other data repository and, if applicable, for each type of information within each source, please identify the

date at which the information was last updated, and the schedule or criteria for updating information. Part C. (1) Please provide an example or examples of what information would be entered into each system associated with a new customer at a new location requesting secondary service under a scenario(s) of the company's choosing, and the approximate timeline that would typically be associated with entry of that information. (2) Please provide an example or examples of what information would be entered into each system associated with a new customer at a new location requesting primary service under a scenario(s) of the company's choosing, and the approximate timeline that would typically be associated with entry of that information. (3) Please provide an example or examples of what information would be entered into each system associated with an existing primary circuit being rebuilt with new conductors and poles under a scenario(s) of the company's choosing, and the approximate timeline that would typically be associated with entry of that information. (4) Please provide an example or examples of what information would be entered into each system associated with a new circuit being rebuilt with new conductors and poles under a scenario(s) of the company's choosing, and the approximate timeline that would typically be associated with entry of that information.
