

Exhibit No.:
Issues: Cross-Over
Witness: James M. Maples
Sponsoring Party: Sprint
Type of Exhibit: Direct Testimony
Case No.: TO-2004-0207
Date Testimony Prepared: December 18, 2003

**SPRINT MISSOURI, INC.
AND
SPRINT COMMUNICATIONS COMPANY, L.P.**

DIRECT TESTIMONY

OF

JAMES M. MAPLES

**IN THE MATTER OF A COMMISSION INQUIRY INTO
THE POSSIBILITY OF IMPAIRMENT WITHOUT
UNBUNDLED LOCAL CIRCUIT SWITCHING WHEN
SERVING THE MASS MARKET**

CASE NO. TO-2004-0207

Jefferson City, Missouri
December 2003

**BEFORE THE PUBLIC SERVICE COMMISSION
STATE OF MISSOURI**

In the Matter of a Commission Inquiry)
into the Possibility of Impairment without)
Unbundled Local Circuit Switching When)
Serving the Mass Market)

Case No. TO-2004-0207

AFFIDAVIT OF JAMES M. MAPLES

STATE OF KANSAS)
) ss:
COUNTY OF JOHNSON)

I, James M. Maples, being of lawful age and duly sworn, dispose and state on my oath the following:

1. I am presently Senior Manager, Regulatory Policy for Sprint Missouri, Inc.
2. I have participated in the preparation of the attached Direct Testimony in question and answer form to be presented in the above entitled case;
3. The answers in the attached Direct Testimony were given by me; and,
4. I have knowledge of the matters set forth in such answers and that such matters are true and correct to the best of my knowledge and belief.

JAMES M. MAPLES

Subscribed and sworn to before me on this 18th day of December, 2003.

NOTARY PUBLIC

My Appointment Expires:

1 **BEFORE THE PUBLIC SERVICE COMMISSION**
2 **OF THE STATE OF MISSOURI**
3 **DIRECT TESTIMONY**
4 **OF**
5 **JAMES M. MAPLES**
6
7

8 **Q. Please state your name, business address, employer and current position.**

9 A. My name is James M. Maples. My business address is 6450 Sprint Parkway,
10 Overland Park, KS 66251. I am employed as Senior Manager – Regulatory
11 Policy for Sprint/United Management Company.
12

13 **Q. Please summarize your qualifications and work experience.**

14 A. I received a Bachelor of Science degree from East Texas State University,
15 Commerce, Texas, in December 1973 with majors in mathematics and industrial
16 technology. During that period, beginning in 1968, I was also employed by
17 Sprint/United Telephone Texas as an installer/repairman of residential, simple and
18 complex business systems and as a central office switchman. I completed the
19 company's Management Training program in 1974 and was promoted to the
20 position of Revenue Requirement Analyst later that same year.
21

22 For the next seventeen (17) years I held positions of increasing responsibilities in
23 state, regional and corporate Sprint organizations. During that period, I prepared

1 or was responsible for jurisdictional separation studies, revenue budgets, demand
2 forecasts, access charge rates, and financial reporting to various regulatory
3 agencies.

4
5 From 1991 through 1995, as Manager Cost Allocations at Sprint/United
6 Management Corporation, I developed financial models for alternative regulation,
7 participated in a two year project to develop a system-wide product costing
8 model, developed and trained personnel on revenue budget models, and
9 standardized systems for separations costing through system design, development,
10 testing and implementation.

11
12 In 1995 I accepted the position of Manager-Pricing/Costing Strategy and for 17
13 months coordinated several system-wide teams that were charged with the
14 identification and development of methods, procedures, and system changes
15 required to implement local competitive services. During that period, I
16 coordinated the technical support needed to establish and maintain relationships
17 with Competitive Local Exchange Carriers (CLECs).

18
19 From September 1996 through July 1999 I held the position of manager of
20 Competitive Markets – Local Access with the responsibility for pricing unbundled
21 network elements, supporting negotiations with new competitive carriers, and
22 assisting in implementation issues.

1 I began my current position in August 1999. My responsibilities include the
2 review of legislation, court rulings and state Commission orders affecting
3 telecommunications policy, interpreting the impact to the corporation, developing
4 positions, communicating them throughout the organization, and representing
5 them before regulatory bodies such as the Public Service Commission of the State
6 of Missouri.

7

8 **Q. Have you previously testified before state regulatory commissions?**

9 A. Yes. I have testified before the Florida, Nevada, and California regulatory
10 commissions regarding interconnection and network unbundling issues.

11

12 **Q. What is the purpose of your testimony?**

13 A. The purpose of my testimony is to present Sprint's position regarding the
14 appropriate policy for determining the multi-line customer cross-over between
15 mass market customers served via DS-0 (voice grade) loops and enterprise
16 customers served via DS-1 loops. My testimony also includes Sprint's
17 recommended approach for calculating the multi-line cross-over and the results
18 for the state of Missouri. This study is a subset of the economic analyses that
19 state commissions were directed to conduct as a result of the FCC's Triennial
20 Review Order (TRO) and codified in 47 CFR 51.319(d)(2)(iii)(B)(3).

21

22 **Q. Please define a DS-0 voice-grade loop, a DS-1 enterprise loop and the**
23 **difference between the two.**

1 A. A DS-0 voice-grade loop is a single line over which voice service is provided.
2 DS-0 loops are generally used to provide service to mass market customers. A
3 DS-1 enterprise loop provides 24 individual DS-0's and is generally used to
4 provide service to enterprise customers.

5

6 **Q. What is the multi-line customer cross-over?**

7 A. The multi-line customer cross-over is the point at which it is more economical for
8 a company to provide service to an end user with multiple analog voice grade
9 lines using a loop with greater capacity (DS-1) rather than a single loop (DS-0)
10 for each voice grade line. A simple analogy may be helpful. We all know that it
11 is cheaper to buy donuts by the dozen. Assume a baker charges \$0.30 per donut
12 or \$2.99 per dozen. If you want to purchase 9 or fewer donuts, it's cheaper to buy
13 them individually, but once you need 10 or more, it's cheaper to buy a dozen, and
14 you will probably buy a dozen, even if you really only need 10. The same holds
15 true between DS-0s and DS-1s.

16

17 **Q. What guidance does the TRO provide for determining the appropriate cut-**
18 **off?**

19 A. Paragraph 497 of the TRO presents several key points on this issue. First, the
20 TRO defined mass market customers as those customers that "are analog voice

1 customers that purchase only a limited number of POTS lines, and can be
2 economically served via DS-0 loops."¹

3 Second, the TRO recognized that, for certain customers, service providers are in a
4 position to make a decision as to whether they will provide service using DS-0 or
5 DS-1 facilities, based on the number of DS-0 loops needed to provide the
6 customer's voice services.² The FCC recognized that, for certain customers who
7 require multiple DS-0s, service providers are able to achieve better economics by
8 installing multiplexing equipment at the customer premises.³ Identifying the
9 quantity of DS-0 loops at which these economic benefits are realized—i.e., the
10 cross-over point—will, in essence, create a line of demarcation between the mass
11 market and the enterprise market.

12

13 **Q. Does Sprint agree with the FCC's use of an economic cross-over point as a**
14 **method for distinguishing between mass market and enterprise customers?**

15 A. Yes. Sprint has always recognized that some businesses have
16 telecommunications needs that are more similar to mass market residential
17 customers than large business customers. Indeed, many telecommunication
18 providers address a segment of the business market with the same marketing
19 techniques as they use for residential.

¹ TRO paragraph 497.

² TRO paragraph 497 states, "At some point, customers taking sufficient number of multiple DS-0 loops could be served in a manner similar to that described above for enterprise customers – that is, voice services provided over one or several DS-1s"

³ TRO footnote 1544 "The evidence in the record indicates that it may be viable to aggregate loops at a customer location and provide service at a DS-1 capacity or higher. Specifically, if a customer has enough lines to justify the expense of purchasing multiplexing equipment and a high-capacity line, it makes sense to aggregate the customer's loops..."

1 **Q. Is there a simple example of the difference in marketing techniques between**
2 **those that providers use to address mass market customers and those that**
3 **providers use to address enterprise customers?**

4 A. The complexity and the volume of service required by any given customer are
5 two of the variables that determine which marketing methods have historically
6 been successful in acquiring new customers. For example, mass media
7 advertising is less effective than an extensive face-to-face sales visit would be for
8 a business with very complicated communications needs. But for a smaller
9 business with less complex needs, mass media advertising is often sufficient.

10

11 **Q. Does Sprint agree with the FCC statements that service providers must make**
12 **provisioning choices once they understand the customer's needs?**

13 A. Certainly. The service needs of a business customer at a specific physical
14 location determine the minimum facility capacity required to provide those
15 services. Based on the customer's needs, the service provider determines the most
16 efficient (i.e. least costly) facilities required to provide the services the customer
17 desires. The provider is rewarded with higher profit margins by minimizing
18 facility costs.

19

20 **Q. Is an economic cross-over analysis the best way for a service provider to**
21 **determine the most efficient, least-cost provisioning option?**

22 A. Yes. The service provider needs will determine the most efficient method of
23 serving the customer. Based on those service needs, the CLEC determines if it is

1 cost effective to serve the customer with DS-0 loops or aggregate the service
2 needs over a DS-1 loop facility at the customer premises. At some level of
3 service need, the provider is better off serving the business customer with a DS-1
4 facility instead of multiple DS-0s.

5

6 **Q. Has Sprint developed an analysis of this cross-over?**

7 A. Yes. Exhibit JMM-1, attached to my testimony, shows the results from Sprint's
8 study. The average economic cross-over point, the point at which a multi-line
9 DS-0 customer is served more efficiently using a DS-1 capacity loop, was
10 calculated for Southwestern Bell, CenturyTel, and Sprint ILEC territories in the
11 state of Missouri.

12

13 **Q. What is the appropriate cut-off for multiline DS-0 customers (where it is**
14 **more economic to serve a multiline voice customer with a DS-1 loop)?**

15 A. The model results indicate that up to 10 DS-0s at a customer's location,
16 purchasing individual loops is more cost effective than purchasing single DS-1.
17 Above 10 DS-0s, the DS-1 becomes the more cost effective means of providing
18 service to the customer.

19

20 **Q. What are the cost components in the economic cost cross-over model for the**
21 **provision of service over a DS-1 facility?**

22 A. Our model includes the monthly recurring charges of the unbundled network
23 element DS-1 loops, the unbundled network element non-recurring charges for

1 DS-1 loops, and the monthly costs of a channel bank installed at the customer's
2 premises used to multiplex multiple voice channels onto a DS-1 loop facility.

3

4 **Q. What are the cost components in the economic cost cross-over model for the**
5 **provision of service over a DS-0 facility?**

6 A. The model includes the monthly recurring charges of the unbundled network
7 element DS-0 loops and the non-recurring charges for unbundled network element
8 DS-0 loops. The non-recurring charges reflect the charges for the initial DS-0
9 loop and each additional loop ordered, assuming that all of the loops are installed
10 at the same time.

11

12 **Q. What are the sources of unbundled network element prices for the monthly**
13 **recurring services and the non-recurring services?**

14 A. The prices for Southwestern Bell are taken from the existing Interconnection
15 Agreement between Southwestern Bell and Sprint. CenturyTel's prices are from
16 the latest Interconnection Agreement filed with the Public Service Commission.⁴
17 Sprint's recurring prices and non-recurring prices are those that are currently
18 offered to carriers seeking interconnection and access to network elements under
19 section 251 of the Telecommunications Act in Missouri.

20

⁴ Interconnection, Resale and Unbundling Agreement between CenturyTel of Missouri, LLC and Missouri Telecom, Inc. in the State of Missouri, February 2003

1 **Q. What is the source of the access line data used to determine the weighted**
2 **average UNE prices?**

3 A. The access line data are from the FCC Universal Service Fund model (HCPM)
4 Report for 2000 adjusted with the Universal Service Administrative Company
5 (USAC) lines in service for year-end 2001. For each company in the study, the
6 difference between the lines in HCPM and lines in USAC was applied to the wire
7 center level line counts to determine a more current estimate of access lines for
8 the studied ILECs.

9
10 **Q. What additional variables are included in the calculations?**

11 A. A weighted average cost of capital input is used for amortizing the non-recurring
12 charges. The 12.56% cost of capital was taken from the Sprint cost studies that
13 support its current UNE prices in Missouri.⁵

14
15 **Q. How are the non-recurring unbundled network element costs treated in the**
16 **economic cross-over analysis?**

17 A. The non-recurring unbundled network element charges for establishing DS-0 or
18 DS-1 services are amortized over a 24 month period using Sprint's weighted cost
19 of capital.

20

⁵ While 12.56% represents only Sprint's weighted cost of capital, it should be representative of the combined results of the three companies' cost of capital in Missouri. Further, substituting a specific company's data would not have a material impact on the resultant cross-over figure.

1 **Q. How is the monthly cost of the channel bank at a DS-1 customer premises**
2 **calculated?**

3 A. The monthly cost of the equipment is calculated by dividing the total material cost
4 of the channel bank over the life of the asset, accounting for Sprint's cost of
5 capital, eleven year depreciation life, income tax, and maintenance.

6
7 Material prices reflect the size of the channel bank and cards that would be
8 installed at a customer premises capable of multiplexing one DS-1 into DS-0s.
9 The material was amortized using Sprint's annual cost factors from the same Cost
10 of Local Exchange Telecommunications Services UNE cost studies mentioned
11 above. Labor related to the installation of the customer premises channel bank
12 was treated consistent with the UNE non-recurring charges for the DS1 loop and
13 amortized over 24 months.

14

15 **Q. How are these cost components used to calculate a state-wide average cross-**
16 **over between unbundled DS-0 and DS-1 loops?**

17 A. The model calculates the UNE provisioning costs of both DS-0 and DS-1
18 facilities as described above for each central office in the state of Missouri served
19 by the largest LECs (Southwestern Bell, CenturyTel and Sprint). A weighted
20 average cost for each MRC and NRC is computed by multiplying the central
21 office specific result by the percentage of access lines in that central office. The
22 weighted average cost of a DS-1 loop is then divided by the weighted average
23 cost of a DS-0 loop.

1 **Q. The cross-over calculations produce a state-wide average cross-over point.**
2 **Why does Sprint calculate a single, statewide average cross-over point,**
3 **rather than a market-specific cross-over point or even an ILEC-specific**
4 **cross-over point?**

5 A. The realities of the way that marketing efforts are conducted lead Sprint to believe
6 that a single statewide average cross-over point is more efficient and more useful.
7 For example, if a telemarketer is pursuing sales opportunities among small
8 businesses in Missouri the telemarketer will require a single point of distinction
9 that determines whether s/he is able to provide UNE-P based service to the
10 customer or not. The telemarketer does not know whether the customer being
11 called resides in one MSA or another, and quite possibly neither does the
12 customer. Similarly, a direct-visit salesperson making sales visits throughout the
13 St. Louis MSA is unaware of the point at which s/he moves from one UNE zone
14 to another. It is more efficient to have a single cross-over point that the
15 salesperson can apply to all potential customers, rather than maintain a veritable
16 roster of potential cross-over points based on a potential customer's MSA, or
17 market, or UNE zone, etc. Because Sprint's estimate is an average, the statewide
18 cross-over will, on average, be efficient for serving customers throughout the
19 state, even if it is slightly understated or overstated for any single customer.

20

21 **Q. Does this conclude your testimony?**

22 A. Yes.
