

Exhibit No.:  
Issue: Cash Working Capital Lead/Lag Study, Property  
Tax Tracker  
Witness: Michael Adams  
Type of Exhibit: Direct Testimony  
Sponsoring Party: Evergy Missouri West  
Case No.: ER-2022-0130  
Date Testimony Prepared: January 7, 2022

**MISSOURI PUBLIC SERVICE COMMISSION**

**CASE NOS.: ER-2022-0130**

**DIRECT TESTIMONY**

**OF**

**MICHAEL ADAMS**

**ON BEHALF OF**

**EVERGY MISSOURI WEST**

**Kansas City, Missouri  
January 2022**

**DIRECT TESTIMONY**

**OF**

**MICHAEL ADAMS**

**Case No. ER-2022-0130**

1                                    **INTRODUCTION AND WITNESS QUALIFICATIONS**

2    **Q.    Please state your name and business address.**

3    A.    My name is Michael Adams. My business address is 293 Boston Post Road West, Suite  
4            500, Marlborough, Massachusetts 01752.

5    **Q.    By whom are you employed and in what position?**

6    A.    I am a Senior Vice President with Concentric Energy Advisors, Inc. (“Concentric”).

7    **Q.    Please describe Concentric.**

8    A.    Concentric is a management consulting and economic advisory firm focused on the North  
9            American energy and water industries. Concentric specializes in regulatory and litigation  
10            support, transaction-related financial advisory services, energy market strategies, market  
11            assessments, energy commodity contracting and procurement, economic feasibility  
12            studies, and capital market analyses and negotiations.

13   **Q.    What are your responsibilities in your current position?**

14   A.    As a consultant, my responsibilities include assisting clients in identifying and addressing  
15            business issues. My primary areas of focus have been regulatory-, financial- and  
16            accounting-related issues.

1 **Q. Please describe your education.**

2 A. I have an MBA in Finance from the University of Illinois – Springfield and a BS in  
3 Accounting from Illinois College. I am a member of the American Institute of Certified  
4 Public Accountants and the Illinois Society of Certified Public Accountants.

5 **Q. Please describe your work experience.**

6 A. I have worked for an investor-owned utility, a regulatory agency, and most recently as a  
7 consultant to the energy industry. A statement of my background and qualifications is  
8 attached as **Schedule MJA-1**.

9 **Q. Have you ever testified in a regulatory proceeding?**

10 A. Yes. I have provided expert testimony or reports before the Arkansas Public Service  
11 Commission; the City of El Paso; the Connecticut Public Utilities Regulatory Authority,  
12 the Federal Energy Regulatory Commission (FERC); the Georgia Public Service  
13 Commission; the Hawaii Public Utility Commission; the Idaho Public Utilities  
14 Commission; the Illinois Commerce Commission; the Maine Public Utilities  
15 Commission; the Maryland Public Service Commission; the Massachusetts Department  
16 of Telecommunications and Energy; the Missouri Public Service Commission; the New  
17 Hampshire Public Utilities Commission; the New Mexico Public Regulation  
18 Commission; the State of New Jersey Board of Public Utilities; the Oklahoma  
19 Corporation Commission; the Ontario Energy Board; the Pennsylvania Public Utility  
20 Commission; the Tennessee Public Utility Commission; the Public Utility Commission  
21 of Texas; the State Corporation Commission of Virginia; and the Public Service  
22 Commission of West Virginia.

1 **PURPOSE AND SCOPE**

2 **Q. What is the purpose of your direct testimony?**

3 A. I have been asked by Evergy Missouri West, Inc. d/b/a Evergy Missouri West (“Evergy  
4 Missouri West” or the “Company”) to discuss a lead-lag study that was prepared and  
5 used to develop cash working capital (“CWC”) factors and ultimately to calculate the  
6 Company’s cash working capital requirements. I will also discuss a property tax tracker  
7 being requested by the Company.

8 **CASH WORKING CAPITAL REQUIREMENT AND LEAD-LAG STUDY**

9 **Q. Please define what you mean by the phrase “cash working capital.”**

10 A. Cash working capital is the amount of funds required to finance the day-to-day operations  
11 of the Company.

12 **Q. Are you sponsoring an schedules related to your analysis of cash working capital?**

13 A. Yes. **Schedule MJA-2** has been prepared under my direction and supervision and is  
14 accurate and complete to the best of my knowledge and belief. Specifically, the schedule  
15 shows Evergy Missouri West’s revenue lag and expense leads. Evergy Missouri West’s  
16 requested level of cash working capital is sponsored by Company witness Ronald Klote.

17 **Q. For what period was the lead-lag study performed?**

18 A. The lead-lag study analyzed the Company’s cash transactions and invoices for the twelve  
19 months ended December 31, 2020. Transactions for coal were examined for the period  
20 January 2021 through June 2021, and natural gas transactions were examined for the  
21 period of July 2020 to December 2020, payroll and benefits transactions were examined  
22 for the period May 2020 to April 2021 and Accounts Payable – Other O&M transactions

1 were examined for the period July 2020 to June 2021. The leads and lags were applied to  
2 expense amounts for the test year ending June 30, 2021 and trued-up through May 31,  
3 2022. The periods examined reflect the current practices and thus timing of the  
4 provisioning/receipt of services and the payment for such services.

5 **Q. How should the results of the cash working capital analysis be treated for**  
6 **ratemaking purposes?**

7 A. For ratemaking purposes, the cash working capital requirements should be included as  
8 part of Evergy Missouri West's rate base. The Company's requested level of cash  
9 working capital is sponsored by Company witness Ron Klote.

10 **Q. Is the analysis of the revenue lags and expense leads typically referred to as a lead-**  
11 **lag study?**

12 A. Yes. Cash working capital requirements are generally determined by lead-lag studies that  
13 are used to analyze the lag time between the date customers receive service and the date  
14 customers' payments are received, processed and available to the Company. This lag is  
15 offset by a lead time during which the Company receives goods and services but pays for  
16 them at a later date. The "lead" and "lag" are both measured in days. The dollar-  
17 weighted lead and lag days are then divided by 365 to determine a daily CWC factor.  
18 This CWC factor is then multiplied by the annual test year cash expenses to determine  
19 the amount of cash working capital required for operations. The resulting amount of cash  
20 working capital is then included as part of the Company's rate base. The test year  
21 operating expenses to which the leads and lags were applied in this proceeding are  
22 described in the testimony of Company witness Ronald Klote.

1 **Q. What are the various leads and lags considered in your cash working capital**  
2 **analysis?**

3 A. Two broad categories of leads and lags should be considered: 1) lags associated with the  
4 revenues owed to the Company (“revenue lags”) for services provided to its customers  
5 (i.e., gas and electric services); and 2) lead times associated with the payments for goods  
6 and services received by the Company (“expense leads”).

7 **Q. What is a revenue lag?**

8 A. A revenue lag refers to the elapsed time between the delivery of the Company’s product  
9 (i.e., electricity or natural gas) and the receipt and availability of funds received via  
10 customer payments for the product.

11 **Q. What is an expense lead?**

12 A. In the context of the CWC study, an expense lead refers to the elapsed time from when a  
13 good or service is provided to the Company to the point in time when the Company pays  
14 for the good or service and the funds are no longer available to the Company.

15 **Q. What was the source of information you utilized to determine the leads and lags in**  
16 **your cash working capital analysis?**

17 A. Data from the Company’s Accounts Payable, Customer Service, Human Resources,  
18 Payroll, and Tax systems were used to calculate the revenue lag and expense leads. The  
19 information derived from these sources, together with analyses of specific transactions,  
20 led to the determination of the appropriate number of lead-lag days for Evergy Missouri  
21 West.

**Q. What are the components of the revenue lag?**

A. The revenue lag consists of the following four components: 1) the service lag which represents the midpoint of the period for which service was provided to customers; 2) the billing lag reflects the elapsed time from the end of the service period to when the Company mails bills to its customers; 3) the collection lag represents the length of time from the mailing of the bill to receipt of customers' payments; 4) the payment processing lag reflects the length of time from the receipt of customers' payments to when such funds are available to the Company.

**Q. How was the Company's revenue lag determined?**

A. The Company's actual billing and customer payment processing data for the twelve months ended December 31, 2020, was analyzed to calculate the lag for each component of the overall revenue lag. The lags include a service lag, billing lag, collections lag, and payment processing lag.

**Q. Please explain what is meant by the term "service lag".**

A. The service lag refers to the number of days from the mid-point of the service period to the meter reading date for that service period. Using the mid-point methodology, the average lag associated with the provisioning of service was determined to be 15.21 days (365 days in the year divided by 12 months divided by 2).

**Q. What is meant by billing lag?**

A. Billing lag refers to the average number of days from the date the customer's meter was read until the customer was billed. The billing lag was determined by analyzing the

1 Company's monthly billing schedules and meter reading records. The average billing lag  
2 was determined to be 1.47 days.

3 **Q. What is a collections lag?**

4 A. In the context of the cash working capital analyses, the collections lag refers to the  
5 average amount of time from the date the customer was billed for their energy service to  
6 the date that the Company received payment from its customers. For purposes of the  
7 cash working capital analyses, the Company's actual customer receivables during the  
8 twelve months ended December 31, 2020, were analyzed to determine the collections lag.  
9 Based on weighted average data from the Company and considering accounts receivables  
10 balances by days aged, the average collection lag was determined to be 8.51 days.

11 **Q. Does the Company sell portions of its accounts receivables?**

12 A. Yes. Evergy Missouri West sells an undivided percentage ownership interest in its retail  
13 electric accounts receivables to independent outside investors. These sales are accounted  
14 for as secured borrowings with accounts receivable pledged as collateral and a  
15 corresponding short-term collateralized note payable recognized on the balance sheet.

16 **Q. When determining the Company's cash working capital, should a service lag and  
17 billing lag be applied to the sold receivables?**

18 A. Yes. The Company still has a lag in recovery of its costs from the period of time during  
19 which service was provided to its customers up to the point in time at which the  
20 receivables were sold. Therefore, a service lag and billing lag were applied when  
21 calculating the Company's cash working capital requirement.

1 **Q. How was the sale of portions of the Company's accounts receivables treated in the**  
2 **lead-lag study?**

3 A. During the test period, approximately 69.68 percent of the Company's accounts  
4 receivables were sold. The sale of the receivables was presumed to occur instantaneously  
5 the day bills were issued, so no collection or payment processing lag was attributed to the  
6 sold receivables when determining the overall revenue lag.

7 **Q. How was the collection lag associated with the approximately 30.32 percent of**  
8 **Evergy Missouri West's receivables that were not sold determined?**

9 A. The collection lag associated with the receivables that were not sold was determined by  
10 an aging analysis.

11 **Q. Please explain how the aging of the receivables was calculated.**

12 A. The monthly accounts receivable data, excluding the sold receivables, was categorized  
13 into aging "buckets" of 0-30 days, 30-60 days, 60-90 days, 90-120 days, 120-150 days  
14 and 150+ days. For purposes of calculating the collection lag, I have assumed the  
15 customers pay their bills ratably over the month. Therefore, the midpoint of the first  
16 month is 15 days (*i.e.*, 30 divided by 2). I apply the same assumption that customers will  
17 pay their bills ratably over the course of the month to each aging bucket. It is assumed  
18 that customers will pay their bills ratably over the course of the second month (the month  
19 that is 30-60 days after the bill was issued). Therefore, the midpoint of payments that are  
20 received 30-60 days after the bill is issued is 45 days (*i.e.*, 30 days outstanding from the  
21 first month plus the 15-day midpoint of the second month = 45 days). This same theory  
22 applies to the use of 75 days for payments that are received 60-90 days after the bill is  
23 issued, 105 days for payments that are received 90-120 days after the bill is issued, 135

1 days for payments received 121-150 days after the bill is received. The study capped  
2 the days outstanding at 150 days. The accounts receivable dollars in each bucket are then  
3 multiplied by the midpoint of each bucket to calculate the collections lag.

4 **Q. Based upon your analysis, what collection lag should be assigned to retained**  
5 **receivables?**

6 A. The collection lag to be applied to receivables collected via customer payments was  
7 determined to be 28.07 days.

8 **Q. Have you calculated a weighted collection lag that should be reflected in**  
9 **determination of the total collection lag for purposes of determining the Company's**  
10 **cash working capital requirements?**

11 A. Yes. Given that the Company sold 69.68 percent of its receivables on day one and the  
12 remaining 30.32 percent of the receivables had an average collection lag of 28.07 days,  
13 the average collection lag was calculated to be 8.51 days, which is applied to the entire  
14 balance of the Company's accounts receivables.

15 **Q. Have you calculated the lag associated with processing of customer payments?**

16 A. Yes. The payment processing lag was calculated to be 0.92 days. The calculation takes  
17 into account the various methods of payments that Evergy Missouri West's customers  
18 used to pay their bills, and the time that it takes, on average, to process the various forms  
19 of payment.

1 **Q. What are the various forms of payments that Evergy Missouri West’s customers use**  
2 **to pay their bills?**

3 A. The forms of payment that Evergy Missouri West’s customers use include ACH (i.e.,  
4 electronic fund transfer), credit/bank card, cash, check, and other methods. The  
5 following table provides a breakdown of the methods of payments used and the  
6 percentage of payments by type.

<b>Payment Type</b>	<b>Weighting Factor</b>	<b>Average Lag Days</b>	<b>Weighted Payment Lag Days</b>
ACH	49.8%	1.00	0.50
Card	12.9%	3.00	0.39
Cash	0.9%	3.75	0.03
Check	36.3%	0	0.00
Other (i.e., money orders)	0.2%	0	0.00
Total	100.0%		0.92

7  
8 **Q. Based upon your study, what is the Evergy Missouri West’s total revenue lag?**

9 A. The total revenue lag was determined to be 26.11 days. A breakdown of the total revenue  
10 lag is shown in the following table.

<b>Component of Revenue Lag</b>	<b>Days</b>
Service Lag	15.21
Billing Lag	1.47
Collections Lag	8.51
Payment Processing	0.92
Total Days	26.11

11  
12 **Q. Was a separate revenue lag calculated for and applied to franchise taxes?**

13 A. Yes. The revenue lag applied to franchise taxes was calculated to be 10.90 days. The  
14 revenue lag for franchise taxes excludes the lag associated with the service period. All

1 other components of the revenue lag (i.e., the billing lag, collection lag, and payment  
2 processing lag) are the same as that included in the revenue lag applied to all other  
3 expenses.

#### 4 **EXPENSE LEADS**

5 **Q. What expense-related leads were considered in the lead-lag analysis?**

6 A. Lead times associated with the following expense categories were considered in the lead-  
7 lag study: a) payroll and withholdings; b) employee benefits; c) pensions; d) accrued  
8 vacation; e) incentive compensation; f) fuel; g) purchased power; h) other operations and  
9 maintenance (“O&M”) expenses; i) general taxes other than income taxes; j) federal  
10 income taxes; k) state income taxes; and l) interest on long-term debt.

11 **Q. When the Company paid an expense by check, was an incremental lead added to the  
12 overall expense lead to reflect a float time?**

13 A. Yes. When paid by check, an incremental bank float of 20.71 days was added to the  
14 expense overall expense lead.

15 **Q. Provide an explanation of the expense leads associated with the Company's payroll  
16 and withholdings expenses.**

17 A. Payroll is handled by Evergy Missouri Metro, therefore the same expense lead is used for  
18 both Evergy Missouri West and Evergy Missouri Metro. An expense lead of 13.21 days  
19 was calculated for payroll and withholdings expenses.

1 **Q. Are there other expense leads that use the same calculation as Evergy Missouri**  
2 **Metro, similar to the payroll and withholdings expense?**

3 A. Yes. Evergy Missouri West and Evergy Missouri Metro use the same expense leads for  
4 benefits provided to the Company's employees and contributions to the pension plan.

5 **Q. What expense lead was calculated related to the benefits provided to the Company's**  
6 **employees?**

7 A. A weighted expense lead of 13.29 days was calculated for the administration and claims  
8 payments associated with the Company's group health and 401k benefit programs.

9 **Q. Did the Company make contributions to its pension plan during the test year?**

10 A. Yes. The Company made quarterly pension contributions. Reflecting the midpoint of the  
11 service period and the date on which the contribution was made, a weighted average  
12 expense lead of 42.25 days was calculated for the pension contribution expense.

13 **Q. What expense lead was applied to the Company's vacation accrual expense?**

14 A. An expense lead of 365 days was applied to the Company's vacation accrual expense.

15 **Q. How was the expense lead associated with incentive compensation determined?**

16 A. Eligible Evergy employees are awarded incentive compensation for a given year which is  
17 then paid in mid-March of the following year. As such, the expense lead for incentive  
18 compensation expense consists of the mid-point of calendar year, or 182.50 days (i.e.,  
19 365 divided by 2), plus 75 days representing the payment date of March 15<sup>th</sup> of the  
20 following year. The sum of the midpoint of the year for which the incentive

1 compensation is earned and the payment in mid-March of the following year results in an  
2 expense lead of 257.50 days.

3 **Q. What expense lead was calculated related to the Company's purchase of coal?**

4 A. Based upon an analysis of coal purchases from the Company's various suppliers and the  
5 cost of rail transport, an expense lead of 11.84 days was calculated. The expense lead  
6 reflects the midpoint of time during which product was provided, as well as the elapsed  
7 time from the service period until payment was made by the Company. The expense lead  
8 of each transaction was dollar weighted to arrive at the overall expense lead.

9 **Q. Was an expense lead also calculated related to the Company's purchase of natural**  
10 **gas?**

11 A. Yes. Based upon an analysis of the natural gas purchases from the Company's various  
12 suppliers an expense lead of 38.87 days was calculated. The expense lead reflects the  
13 midpoint of time during which product was provided, as well as a payment processing  
14 lead. The combined leads were dollar weighted to calculate the expense lead.

15 **Q. What is the expense lead time associated with the Company's purchases of**  
16 **electricity?**

17 A. Based on an examination of the service periods and payment dates for the Company's  
18 sources of purchased power, a weighted expense lead time of 36.25 days was determined.  
19 The expense lead includes a half month of service lead time.

1 **Q. What are other O&M expenses and what lead times were associated with such**  
2 **expenses?**

3 A. The Company engages in transactions with other vendors for a variety of purposes  
4 including facility maintenance, system maintenance, and customer service. Accounts  
5 payable data was analyzed in order to calculate a lead time associated with payment for  
6 services related to other operations and maintenance activities. The analysis indicates  
7 that, on average, invoices were paid by the Company 38.30 days after receipt. This lead  
8 time includes a half month of service lead time as well as bank float for invoices paid for  
9 by check.

10 **Q. How were property/real estate taxes treated in the analysis?**

11 A. The Company pays property taxes and/or payments in lieu of taxes to a number of taxing  
12 authorities in multiple states. The dollar weighted expense lead applied to property/real  
13 estate tax expense considered the beginning and ending date of the tax period by  
14 jurisdiction, as well as the date the taxes were paid to arrive at a dollar weighted lead of  
15 205.79 days applied to property tax expenses.

16 **Q. What are the various general taxes considered in the analysis?**

17 A. The following general taxes were considered in the study: a) Gross Receipts Tax and  
18 Franchise Tax; and b) Missouri Sales Tax, Use Tax, and Heavy Vehicle Tax. The  
19 Company pays such taxes either on a monthly, quarterly, semi-annual or annual basis,  
20 depending upon the jurisdiction. Based upon the tax period the weighting and timing of  
21 the payment of the various taxes, an expense lead of 55.64 days was calculated for Gross  
22 Receipts Tax and Franchise Tax and an expense lead of 5.17 days was calculated for  
23 Missouri Sales Tax, Use Tax, and Heavy Vehicle Tax.

1 **Q. How did your study address federal income taxes?**

2 A. The lead time associated with federal income tax payments was based on the provisions  
3 of the Internal Revenue Code that require estimated tax payments of 25 percent of total  
4 income taxes due each quarter of the current year. Taking this schedule into  
5 consideration a lead time of 38.00 days for federal income taxes was determined.

6 **Q. How did the study address state income taxes?**

7 A. The Company makes quarterly payments to the state. Taking this statutory payment  
8 schedule into consideration, a weighted expense lead time of 38.00 days for state income  
9 tax payments was determined. Since payments are made electronically, no additional  
10 float time was included.

11 **Q. Provide a description of how lead times associated with the Company's long-term  
12 interest expenses were addressed by the study.**

13 A. The Company made semi-annual long-term interest payments on its long-term debt  
14 throughout the test year. Payment was made on the last day of each period, so no  
15 payment lead was applied. Using the midpoints of the semi-annual service periods, a  
16 dollar-weighted lead of 91.50 days for long-term interest payments was determined.

17 **Q. Based upon the results of the lead-lag study and the level of expenses sponsored by  
18 Company witness Ronald Klote, what level of cash working capital requirements  
19 should be included in Evergy Missouri West's rate base?**

20 A. Company witness Ronald Klote sponsors the requested level of cash working capital that  
21 should be included in Evergy West's rate base.

1 **PROPERTY TAX TRACKER**

2 **Q. Is Evergy requesting the approval of a tracker related to recovery of property**  
3 **taxes?**

4 A: Yes, the Company is requesting the approval of property tax tracker to recover property  
5 tax expenses above those reflected in the base rates set in this proceeding. The request  
6 for the property tax tracker is discussed by Company witnesses Darrin Ives and Melissa  
7 Hardesty. The property tax tracker will capture the differences between the Company's  
8 actual property tax expense and the level of property tax expense that is included in base  
9 rates as a result of this proceeding.

10 **Q. Why is such a tracker appropriate?**

11 A. The level of most expenses incurred can be influenced, managed and controlled by the  
12 Company. Traditional cost of service ratemaking is appropriate for costs which can be  
13 managed and influenced by the Company. For costs that are not directly manageable by  
14 the Company, however, a tracker such as that proposed by the Company is appropriate.  
15 In the case of property taxes, the Company essentially has no control over the level of  
16 property taxes assessed by taxing bodies/authorities. The valuation and assessed tax rate  
17 are assessed solely by the taxing body. Further, the level of property taxes paid by the  
18 Company is material and tends to only trend upward.

19 **Q. Have you reviewed the historical trends related to the level of the Company's**  
20 **property taxes paid?**

21 A. Yes, on page 12 of Company witness Melissa Hardesty's testimony, she compares the  
22 historical trajectory of property tax expenses paid by the Company. As the schedule

1 shows, property tax expenses have increased approximately \$4.2 million over the period  
2 from when rates last went into effect to estimated 2021 levels. This represents an  
3 approximate 10 percent increase in property tax expense over that period. The  
4 projections shown in Ms. Hardesty's testimony show the upward trend is expected to  
5 continue with significant increases expected for Evergy Missouri West. As a result of the  
6 lack of control over the level of property taxes assessed, the materiality of the expense,  
7 and the variability of the expense, the Company's request for approval of a mechanism  
8 by which to track and recover actual incurred property tax related expenses is reasonable  
9 and prudent. The request for approval of the rider/tracker is discussed in the direct  
10 testimony of Company witnesses Darrin Ives and Melissa Hardesty.

11 **Q. Has the Company historically been able to recoup the level of property taxes paid**  
12 **from rates established in prior rate proceedings?**

13 A. No. The Company is not currently allowed to recover any under collection between the  
14 actual level of property tax expense paid and the amount allowed in the Company's last  
15 rate proceeding.

16 **Q. Have you reviewed the property tax recovery mechanism proposed by the**  
17 **Company?**

18 A. Yes, I have.

19 **Q. Please provide your thoughts and observations regarding the Company's proposed**  
20 **mechanism.**

21 A. Property taxes support the communities in which the Company operates, and the  
22 Company is required to pay those taxes. In recent years, however, property tax expenses

1 billed to the Company by the various communities/taxing authorities, while associated  
2 with critical services for citizens and businesses, are not associated with the services  
3 provided by the Company, and the level of expense billed to the Company by the taxing  
4 bodies is beyond the Company's control. Therefore, a tracker is an appropriate method  
5 by which to allow the Company to recoup its actual incurred property tax expenses. The  
6 tracker will be a two-way mechanism, so if the actual amount of property tax expense  
7 turns out to be less than the amount included in the forecast, customers will be protected  
8 by adjustments to amounts recovered via the tracker. Therefore, the Company should not  
9 experience a lag in collecting those taxes from customers.

10 **Q. Are you aware of other State regulatory jurisdictions that have approved similar**  
11 **property tax tracker mechanisms?**

12 A. Yes. The following are examples of State regulatory commissions that have approved  
13 recovery mechanisms such as the one proposed by Evergy Metro/West:

- 14 • Arizona - Southwest Gas ("SWG") was permitted to implement a Property Tax  
15 Mechanism that establishes a regulatory asset account to defer any changes in property  
16 tax expense for recovery in the Company's next general rate case.<sup>1</sup> The mechanism  
17 tracks differences in annual property tax expense versus the amount of property tax  
18 expense in the authorized cost of service.
- 19 • **Arkansas** - Southwestern Electric Power Company's Residential Tariff includes a  
20 Tax Adjustment which states "In addition to all other charges, the amount of the  
21 Customer's bill will be increased by proportionate part of any new tax or increased

---

<sup>1</sup> Docket No. 2019.08.047. August 7, 2019.

1 rate of tax in accordance with the Tax Adjustment Rider – Arkansas.”<sup>2</sup> The tariff  
2 schedule provides for the Company to pass directly to its customers within a  
3 municipality the proportionate part of any franchise or street rental taxes levied or  
4 imposed on the Company by that municipality on gross revenues from those  
5 customers.

- 6 • **Colorado** - The Public Service Company of Colorado proposed to continue the  
7 property tax tracker based upon the forecasted amount of property tax expense in  
8 2022. The deferral is based upon an amount set in the test year in the 2019 Electric  
9 Phase I. Property taxes incurred beginning in 2022 that are greater or lower than the  
10 property tax baseline level will be deferred in a regulatory asset or regulatory liability  
11 account, and any regulatory asset or liability would be recovered or refunded in a  
12 future rate case.

- 13 • **Kansas** - Kansas Statute 66-117 states: Whenever, after the effective date of this act,  
14 an electric public utility, a natural gas public utility or a combination thereof, files  
15 tariffs reflecting a surcharge on the utility's bills for utility service designed to collect  
16 the annual increase in expense charged on its books and records for ad valorem taxes,  
17 such utility shall report annually to the state corporation commission the changes in  
18 expense charged for ad valorem taxes. For purposes of this section, such amounts  
19 charged to expense on the books and records of the utility may be estimated once the  
20 total property tax payment is known. If found necessary by the commission or the  
21 utility, the utility shall file tariffs which reflect the change as a revision to the

---

<sup>2</sup> Southwestern Electric Power Company, Arkansas Electric Rates, Tariff, Sheet No. R-2.2 Sheet 2 of 2.

1 surcharge. Upon a showing that the surcharge is applied to bills in a reasonable  
2 manner and is calculated to substantially collect the increase in ad valorem tax expense  
3 charged on the books and records of the utility, or reduce any existing surcharge based  
4 upon a decrease in ad valorem tax expense incurred on the books and records of the  
5 utility, the commission shall approve such tariffs within 30 days of the filing. Any  
6 over or under collection of the actual ad valorem tax increase charged to expense on  
7 the books of the utility shall be either credited or collected through the surcharge in  
8 subsequent periods. The establishment of a surcharge under this section shall not be  
9 deemed to be a rate increase for purposes of this act. The net effect of any surcharges  
10 established under this section shall be included by the commission in the establishment  
11 of base rates in any subsequent rate case filed by the utility.

- 12 • **Minnesota** - CenterPoint Minnesota has an approved property tax tracker designed to  
13 ensure recovery of actual property tax paid by the Company less the amount included  
14 in rates, and less any amounts recovered in litigation that the Company has filed or  
15 may file regarding its property tax assessments.
  
- 16 • **Montana** - Section 69-3-308 of the Montana Code Annotated 2021 requires the  
17 Commission to allow a public utility to file rate schedules containing provisions for  
18 the automatic adjustment and tracking of Montana state and local taxes and fees,  
19 except state income tax, paid by the public utility. The resulting rate schedule changes  
20 must include: (A) adjustments for the net change in federal and state income tax  
21 liability caused by the deductibility of state and local taxes and fees; (B) retroactive  
22 tax adjustments; and (C) adjustments related to the resolution of property taxes paid  
23 under protest.

1 • **New Hampshire** - Liberty Utilities (EnergyNorth Natural Gas Corp.) requested  
2 approval of a property tax recovery mechanism to capture the impact of annual  
3 property tax increases that were beyond the Company’s control as a result of the  
4 implementation of the statutes.<sup>3</sup> Part of the referenced statutes required the  
5 Commission to establish by order a rate recovery mechanism for the property taxes  
6 paid by a public utility. In 2019, the Legislature passed, and the Governor signed HB  
7 700, which established a new method for municipalities to assess utility property and  
8 provided for a new mechanism for utilities to adjust rates annually to recover (or  
9 refund) changes in property taxes. The guidelines for the new mechanism are codified  
10 at Revised Statutes Annotated (“RSA”) 72:8-b.

11 ○ 72:8-e Recovery of Taxes by Electric, Gas and Water Utility Companies. For  
12 the implementation period of the valuation of utility company assets under  
13 RSA 72:8-d, VI and terminating with the property tax year effective April 1,  
14 2024, the public utility commission shall by order establish a rate recovery  
15 mechanism for any public utility owning property that meets the definition of  
16 utility company assets under RSA 72:8-d, I [1] Such rate recovery mechanism  
17 shall either:

- 18 1. Adjust annually to recover all property taxes paid by each such utility on  
19 such utility company assets based upon the methodology set forth in of  
20 RSA 72:8-d; or
- 21 2. Be established in an alternative manner acceptable to both the utility and  
22 the public utility commission.

23 A settlement was reached resolving all the issues in the proceeding  
24 except the recovery of cost associated the Granite Bridge project. The  
25 Settlement Agreement included a local property tax adjustment  
26 mechanism consistent with RSA 72:8-e. The mechanism allowed Liberty  
27 recovery or refund of local property expense that differ from the amount  
28 included in the base rates, beginning with the April 1, 2020, tax year.  
29 (Order on Settlement Agreement and Permanent Rates No. 26,505. July  
30 30, 2021).

---

<sup>3</sup> Docket DG 20-105, July 30, 2020

- 1       • **Oregon** - Pacific Power Schedule 104 (Oregon Corporate Activity Tax Recovery  
2       Adjustment, or OCAT) facilitates recovery of the annual forecast amount of the OCAT  
3       and a true-up of the previous year's over- or under-recovery via an Automatic  
4       Adjustment Clause. A balancing account is maintained to accrue any difference  
5       between the Company's actual OCAT expense and the amount collected from  
6       consumers through the adjustment rate. Any over- or under-collection of the OCAT  
7       expense is considered when the OCAT Rate is periodically reviewed.
- 8       • **Pennsylvania** - The Pennsylvania Public Utility Commission approved an order  
9       that allows Emporium Water Company to increase rates associated with the  
10      assessment imposed on utilities by the Pennsylvania Department of Revenue. Utilities  
11      can apply to the PUC for the right to pass on to customers the Public Utility Realty  
12      Tax Assessment ("PURTA") tax which is a tax in lieu of property taxes.
- 13     • **South Dakota** - The South Dakota Public Utilities Commission established an  
14      Infrastructure Rider for Northern States Power Company dba Xcel Energy as a means  
15      to recover specific major capital additions that were placed into service in late 2012 or  
16      were expected to be placed into service in 2013, and additionally, any changes in 2013  
17      property taxes from the property taxes included in the 2011 test year. These specific  
18      projects were nearing completion, significant in cost, and were not included in the  
19      2011 rate base used to develop final rates in Docket No. EL12-046. The Infrastructure  
20      Rider adjustment factor to recover the South Dakota jurisdictional portion of the  
21      revenue requirements related to the Rider's seven specific capital projects located  
22      throughout its service territory, in addition to incremental 2013 property taxes over the

1 2011 approved level included in base rates.<sup>4</sup> Given property taxes are assessed by  
2 government agencies and not within the Company’s control, inclusion of the 2013  
3 incremental property taxes was also approved for inclusion within the rider.<sup>5</sup>

- 4 • **Washington** - Puget Sound Energy’s Property Tax Tracker (Schedule No. 140)-  
5 passes through the cost of all property taxes incurred by the Company. The  
6 mechanism acts as a tracker schedule wherein it collects the total amount of property  
7 taxes assessed, as billed by counties or states from the last tax cycle. With  
8 implementation of the tracker mechanism, in addition to removing the cost of all  
9 property taxes from general rates, the tracker is adjusted each year in May based on  
10 that year’s Assessed Property Taxes. If the current year’s property taxes exceed that  
11 of the previous year, the difference will result in an overall increase to customer rates.<sup>6</sup>

12 **Q. Have some State regulatory jurisdictions expanded the tracker concept to effectively**  
13 **true-up the regulated companies’ actual level of operating expenses?**

14 A. Yes. Below are a few examples of State regulatory jurisdictions that have approved  
15 broader cost recovery mechanisms to allow recovery of actual prudently incurred  
16 expenses:

- 17 • **Alabama** - Energy companies operate under a “Rate Stabilization and Equalization  
18 Factor (RSE)” which is designed to lessen the impact, frequency and size of retail rate  
19 increase requests by permitting the Company, through the operation of a filed and  
20 approved rate, to adjust its charges more readily to achieve the rate of return allowed it

---

<sup>4</sup> Docket No. EL12-046, pp. 1-2.

<sup>5</sup> Id., p. 3.

<sup>6</sup> Puget Sound Energy, Inc. Schedule No. 140, Property Tax Tracker, WN U-60.

1 in the rate order of the Commission. By provisions in the rate, the charges are  
2 increased if projections for the upcoming year show that the designated rate of return  
3 range will not be met and are decreased if such projections show that the designated  
4 rate of return range will be exceeded.

- 5 • **Indiana** - Indiana Michigan Power Company received approval of a rate schedule  
6 entitled Transmission, Distribution, and Storage System Improvement Charge  
7 (TDSIC) rider that allows the periodic adjustment of I&M's basic rates and charges to  
8 provide for the timely recovery of eighty percent of approved capital expenditures and  
9 TDSIC costs including the pre-tax return on electric plant in service TDSIC capital  
10 investment, associated depreciation expense, property tax expense, and operation and  
11 maintenance (O&M) expense associated with the TDSIC capital investments, as well  
12 as other TDSIC O&M expense related to I&M's 7-year electric plan.

- 13 • **Massachusetts** - The Massachusetts Department of Public Utilities' Grid  
14 Modernization Factor provides for the recovery of incremental costs associated with  
15 the Company's Grid Modernization Plan. Property taxes will be excluded in the GMP  
16 Revenue Requirement in the first Recovery Year following the GMP Investment Year  
17 in which the eligible taxable plant went into service. Property taxes will be included in  
18 the GMP Revenue Requirement beginning in the second Recovery Year at 50% of the  
19 annual property tax amount. In subsequent years, the GMP Revenue Requirement will  
20 reflect a full year of property taxes.

1 **Q. When the Tax Cuts and Jobs Act (“TCJA”) was passed, did Commissions approve**  
2 **tracking mechanisms or rate adjustments to reflect changes in income tax expenses?**

3 A. Yes. Most State regulatory jurisdictions promptly adjusted regulated utilities’ authorized  
4 income tax expenses when the TCJA was passed. Commissions across the country  
5 adjusted regulated companies’ rates to reflect the changed income tax rates and required  
6 that collected income tax above the revised federal tax rate be returned to customers. The  
7 rationale adopted by most State regulatory jurisdictions in response to the TCJA being  
8 passed, applies to property tax expenses.

9 **Q. What is your recommendation regarding the Company’s requested property tax**  
10 **tracker?**

11 A. The Company’s proposed property tax tracker is reasonable and appropriate and should  
12 be approved by the Commission. The tracker will allow the Company to recover its  
13 actual incurred level of property taxes paid, an expense over which the Company has no  
14 control. Such a mechanism is consistent with those approved by other State Regulatory  
15 Commissions.

16 **Q: Does this conclude your direct testimony?**

17 A. Yes, it does.

## **MICHAEL J. ADAMS**

Senior Vice President

---

Mr. Adams has over thirty-five years of direct experience in the public utility industry. He has worked for an investor-owned utility, a regulatory agency, and most recently as a consultant to the utility industry.

While employed by Illinois Power Company, Mr. Adams monitored project expenditures associated with gas and electric distribution, transmission and generation capital projects.

While employed by the Illinois Commerce Commission, Mr. Adams initially evaluated the rate filings of regulated utilities and provided expert testimony regarding the reasonableness of the requests. Mr. Adams was subsequently charged with developing and managing a management and operations audit program to evaluate company management policies, procedures and performance, as well as operational efficiency and effectiveness. Mr. Adams served as the Deputy Executive Director of the agency at the time of his departure. As a consultant, Mr. Adams has provided consulting services to regulatory agencies and regulated utilities on an array of operational and financial issues since 1995.

Prior to joining Concentric, Mr. Adams was a Managing Director of Navigant Consulting, Inc. Mr. Adams is a Certified Public Accountant, a graduate of Illinois College and holds an M.B.A. from the University of Illinois, Springfield.

Mr. Adams provides financial, regulatory, strategic, operational and litigation support to his energy clients. provides a wide array of services to his energy clients in preparation for, and support of regulatory filings. He has assisted clients with regulatory/legislative initiatives related to the approval and implementation of alternative regulation plans as well as the preparation and support of regulatory filings under alternative rate plans. Mr. Adams also provides advisory services in the areas of mergers and acquisitions. As a consultant, Mr. Adams has provided expert testimony or reports before State and Federal regulatory agencies.
