Ed,

Enclosed is a sketch of the treatment plant expansion from 23,000 G.P.D. to 35,000 G.P.D. We would add 2 stacks of castings as shown. The existing 5 H.P. motors would be change to 7 H.P. motors. After the new castings are set the adjacent castings will have to be pumped down and transfer holes cut in the ends. The price for this is \$25,830.00 pending the engineer's drawings. Tank pumping cost is not included in this price.

Thanks,

Don Friede
