

Ameren Pilot for EV Charging Automated Emissions Reduction

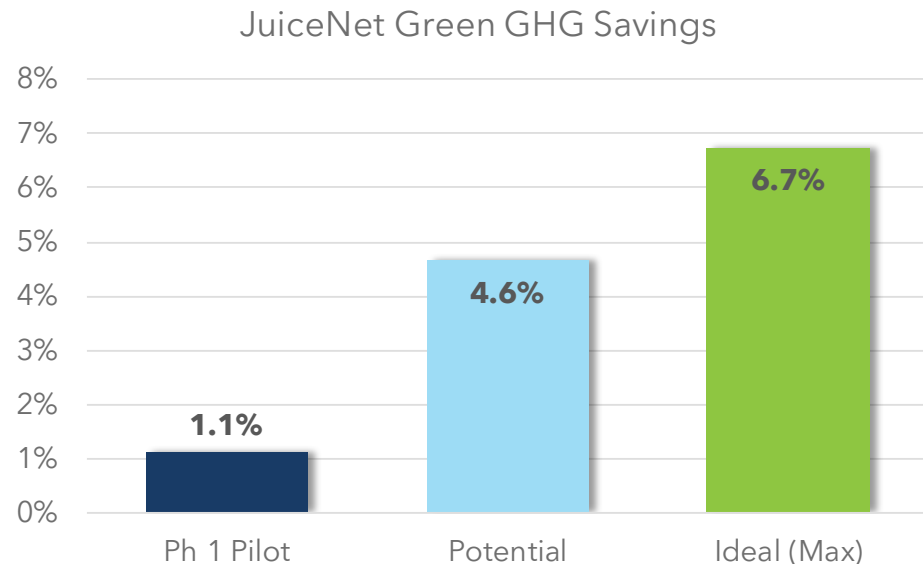

March 2021

Pilot Update, March 2021

Phase 1 Recap

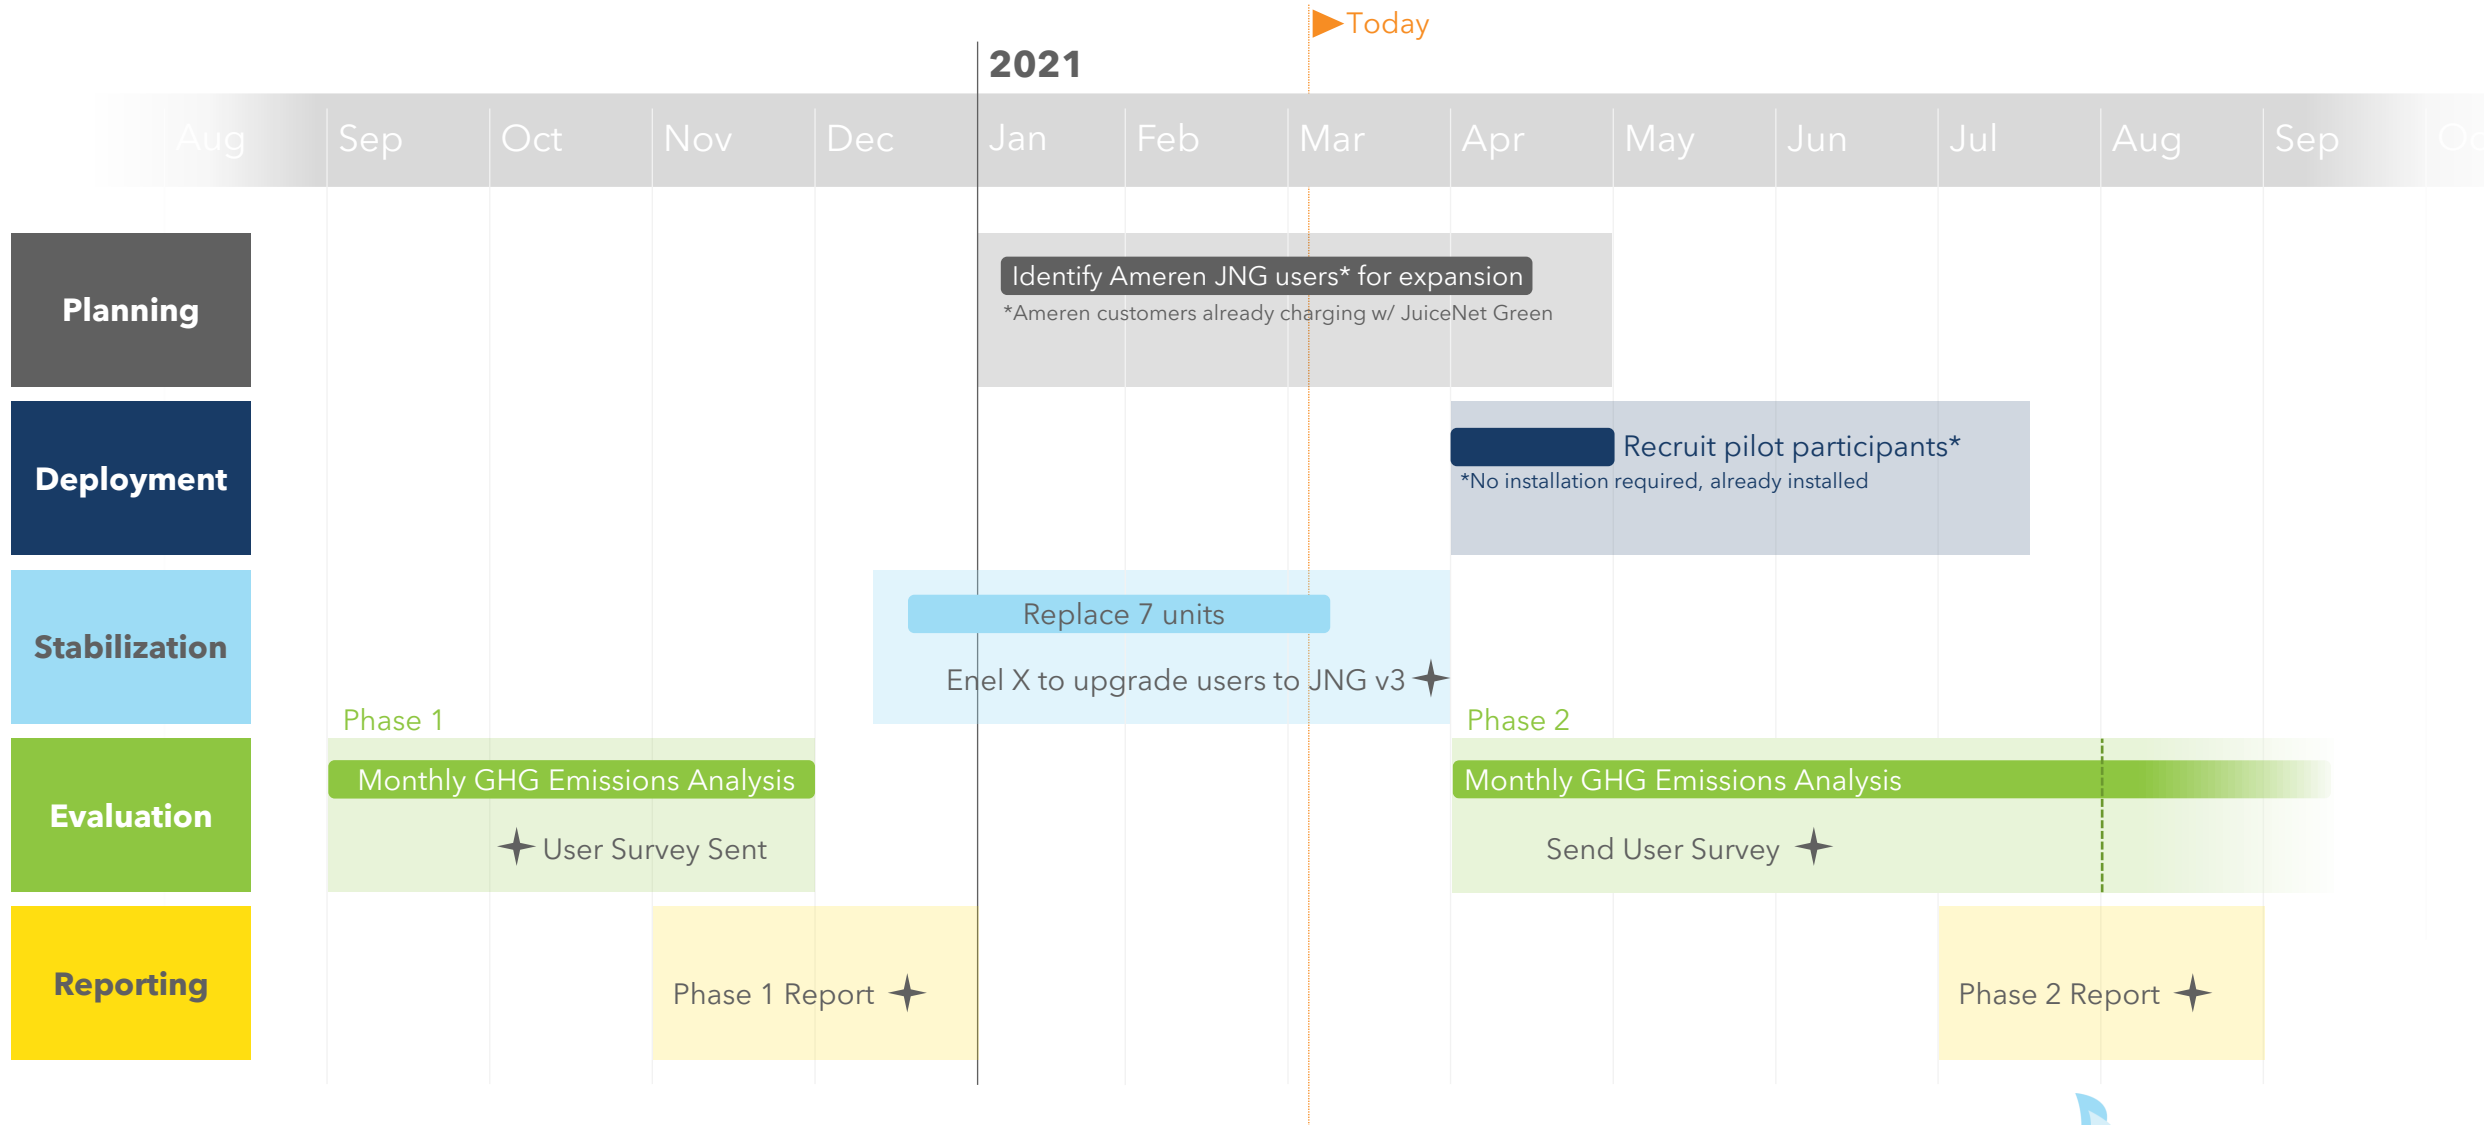

- GHG savings was 1.1%
 - Functionality confirmed
- Potential GHG savings is 4.6%+
- Max expected GHG savings is 6.7%+

Next Steps (Proposed)

1. Monthly performance evaluation has been on hold until Enel X upgrades the units to the new version of JuiceNet Green.
2. JNG V3 release in March 2021
3. In parallel, the team is identifying Ameren customers that are already using JuiceNet Green. We may be able to expand the pilot to these users during Phase 2.
4. Phase 2 evaluation expected to start in April 2021. This evaluation could last 3-4 months. Ameren has also suggested extending this through the end of 2021.

Pilot Phase 2 Timeline (Draft/Proposed)

Thank You
