1	REBUTTAL TESTIMONY
2 3 4	OF
- 5 6	JAMES M. RUSSO
7	MISSOURI AMERICAN WATER COMPANY
8 9	CASE NO. WR-2011-0337
10 11 12	Q. Please state your name and business address.
13	A. James M. Russo, P. O. Box 360, Jefferson City, Missouri 65102.
14	Q. Are you the same James M. Russo who prepared the Class Cost of Service
15	(CCOS) Study filed in Case No. WR-2011-0337?
16	A. Yes I am.
17	Q. Have you made any changes to your previously filed CCOS?
18	A. Yes. I have made a correction to Staff's hybrid Water District 2. Usage
19	originally was inadvertently calculated using cubic feet for the industrial customers in the
20	existing St. Joseph District instead of usage in gallons. I have changed the usage to
21	gallons and recalculated the CCOS study and all related schedules. The updated
22	schedules are attached to this Rebuttal Testimony as RebutSched1-District 2 thru
23	RebutSched6.3-District 2.
24	Q. What is the purpose of your Rebuttal Testimony?
25	A. The purpose of my Rebuttal Testimony is to rebut portions of the Direct
26	Testimony of Missouri-American Water Company's (MAWC or Company) witnesses
27	Paul R. Herbert and Greg A. Weeks, Intervenor Ag Processing's witness Donald E.
28	Johnstone, and the Office of the Public Council's (Public Counsel) witness Barbara A.
29	Meisenheimer.

-

.

### 1 **Company Witness Paul R. Herbert** Q. Does Staff agree with MAWC's proposed single-block rate structure? 2 Staff agrees with MAWC's single-block rate structure for certain districts 3 Α. 4 and customer classes. 5 What is a single-block rate structure? Q. A single-block rate structure is designed such that the price for water 6 Α. 7 remains the same regardless of the amount used. 8 Q. What is a declining-block rate structure? 9 Α. A declining-block rate structure is designed such that the unit price of 10 water decreases with greater volume consumption based upon various blocks of usage. 11 In other words, the price of water in each subsequent block is lower on a per unit basis 12 than in the previous block. A declining block rate structure allocates a smaller portion of 13 the costs of producing the additional water associated with the tail blocks. This method allows customers consuming large quantities of water to pay the lower costs associated 14 15 with producing that additional quantity of water when their usage moves them into the 16 lower priced blocks. 17 Q. Please explain Staff's recommendation regarding MAWC's proposed 18 single-block rate structure. 19 Α. Generally, the Company is requesting a single-block rate structure for all

of its customer classes, as is currently in effect for the St. Louis Metro District. The current customer classes in the St. Louis Metro District are as follows: Rate A, which includes residential, commercial, and small industrial customers; Rate B, which includes sale for resale customers such as water districts or other communities; and Rate J, which

includes large industrial customers. Essentially, the Company's proposal is to apply the
 existing rate structure for the St. Louis Metro district to all of its Missouri customers.

3 Staff recommends maintaining the existing single-block rate structure 4 currently in effect for Rates A, B and J in the existing St. Louis Metro for Staff's hybrid 5 Water District 1. However, for hybrid Water District 2, Staff recommends maintaining 6 the existing rate structure currently in effect for the St. Joseph District. The current rate 7 structure in effect in St. Joseph includes a single-block rate structure for residential 8 customers and a declining block rate structure for all other customer classifications. 9 Also, for hybrid Water District 3, Staff recommends maintaining the existing rate structure in effect in the Joplin District. The rate structure in effect for all classes in the 10 Joplin district is similar to the rate structure in St. Joseph. For an explanation of Staff's 11 hybrid-district proposal, please see the Direct Testimony of Staff Expert James A. Busch. 12

Q. Does the Staff agree with MAWC's proposal to share revenue
responsibility to the sewer districts?

15 Yes. Staff's initial rate design, without a sharing of revenue responsibility A. -16 for the sewer districts, resulted in increases of approximately 170% in Sewer District 1, 17 40% in Sewer District 2, 10% in Sewer District 3, and 200% in Sewer District 4. Staff 18 agrees that in order to mitigate the magnitude of some of these rate increases to MAWC's 19 sewer customers, some level of shared revenue responsibility needs to be provided to 20 these customers. Staff's proposed rate design actually lowers the rates in Sewer District 21 3 and moves the rates in the three remaining sewer districts closer to each Sewer 22 District's actual cost of service (COS).

1 Company Witness Greg A. Weeks

Q. Has Staff reviewed the Company's proposed miscellaneous fee changes
for connection fees, turn-on/turn-off fees, returned check charges, hydrant inspection
fees, etc., proposed in the Direct Testimony of the Company's witness Greg A. Weeks on
page 17, lines 8 thru 19, and listed on schedule GAW-1?

A. Yes.

6

7

Q. What are miscellaneous fees?

A. Miscellaneous fees are the costs directly related to a specific activity such as those listed above. These events are directly caused and paid for by the customer causing the event. The revenue collected from miscellaneous fees is used to reduce the COS for all the customers in a district.

Q. What is Staff's position as it relates to the Company's proposed systemwide uniform miscellaneous fee changes?

A. Staff opposes the system-wide uniform miscellaneous fee changes
proposed by the Company. Miscellaneous fees should be based on the actual cost of
performing the service for the customer in each of Staff's proposed hybrid district. The
results of Staff's review indicate that higher fees should be charged for several items in
Staff's hybrid District 1 because of higher labor costs in the existing St. Louis Metro
District. Please see schedule Rebmiscfee-1 attached to this Rebuttal Testimony for the
results of Staff's study.

21 Q. Mr. Weeks discusses adjusting the miscellaneous charges, including a 22 service activation fee, on page 17, lines 10 thru 12 in his Direct Testimony. Does the

۶

Company presently have a service activation fee in any of the Company's existing
 tariffs?

A. No.

3

6

7

4 Q. Does the service activation fee appear in Schedule GAW-1 or the 5 proposed tariff sheets filed by the Company in this case?

A. No.

Q. Does Staff know what the service activation fee is?

A. MAWC does not specify what this service activation is in its direct testimony. However, after discussion with the Company, Staff has determined that the service activation fee is related to changes made to an existing account, such as a name change, and is also a fee related to initiating new service.

Q. Does Staff support the inclusion of a service activation fee in the currentcase before the Commission?

A. Not at this time. Before Staff can support a service activation fee the
Company would need to provide a cost study of the components included in the service
activation fee and provide the reasoning for and detailed explanation of the fee. In
addition, Staff would need to discuss this new fee in detail with the Company.

18

Q. What concerns does Staff have regarding the service activation fee?

A. Staff is concerned with the idea that the Company is proposing to charge a
customer a fee to change billing information on an existing account. This billing
information includes items such as a name change because of marriage, divorce, or death,
and a billing address change. Charging a fee in such circumstances appears to be

burdensome to the customer and to require very little action by the Company such that
 the fee would not be justified.

Q. Would Staff require specific conditions or circumstances to be established
for this fee before Staff could agree with some type of service activation fee?

A. Yes. Staff would want to make sure the conditions and circumstances for
charging any customer a service activation fee were clearly spelled out in the Company's
tariff, in addition to being supported by a cost study.

8 Intervenor Ag Processing Witness Donald E. Johnstone

9 Q. Does Staff agree with Mr. Johnstone's recommendation that any increase 10 in rates to the Industrial Customer class in Saint Joseph be limited at or near the average 11 increase for the St. Joseph District as stated on page 3, lines 19 thru 22 of his Direct 12 Testimony?

A. No. The results of Staff's CCOS should be implemented whenever
possible. The results of Staff's updated CCOS for hybrid Water District 2, which would
include St. Joseph, results in a District wide increase of 14.4% and an Industrial
Customer Class increase of 21.4%, resulting in a greater than average increase for the
industrial customers in hybrid Water District 2.

- 18 Public Counsel Witness Barbara A. Meisenheimer
- 19

Q. Does Staff agree with Public Counsel's proposed customer charge?

A. No. Public Counsel is proposing a different customer charge for the
different customer classifications in each district. For instance, the results of Public
Counsel's CCOS puts a greater portion of the costs related to the customer charge (meter,
services, and billing and collecting costs) to the commercial customers when compared to

the residential customers in all water districts except the Warren County District. In
 some cases, the customer charge for a commercial customer is over 85% greater than for
 a residential customer.

In contrast, Staff calculates the customer charge by allocating the costs equally to all customer classifications. Staff accomplishes this by allocating cost to meters based on meter equivalents with the 5/8" meter as the base. Staff calculates the customer charge to larger meters by factoring up the 5/8" meter based on the ratios Staff used in determining the meter equivalents.

- Q. Does this conclude your Rebuttal Testimony?
- 10

9

A. Yes, it does.

**UPDATED WATER DISTRICT 2**

Factor 3A

RebutSched4.4-District 2 Page: 1 of 6

Allocation of costs associated with facilities serving base, maximum day extra capacity and fire protection functions.					The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.34 and the average daily system sendout for 2008 of 2.15 MGD. The system demand for fire protection is 1,500 Gallons per minute for 2 hours.
Average Day	1.00	0.6849	20,500,000	0.6381	1
Maximum Day Extra Capacity	0.46	0.3151	9,430,000	0.2935	5
