Response to Leaming Wrenn Interrogatories - DED_20160906

Date of Response: 9/21/2016

Question: DED-600

Please provide weather-normalized monthly billing data in an electronic format for a sample of at least one-half of one percent (0.5%) for each of these classes: Residential General Use, Residential General Space Heating, (1 & 2 meter applications), and Small General Service customers, (primary and secondary voltage customers), that received service from Kansas City Power & Light Company during the test year in this case. At a minimum, please include the following for each customer by month:

1. All applicable rates, riders, energy charge, facilities charge or others fees; if available, please provide this information for each rate block;
2. The minimum or customer charges;
3. The billed total sales (in kWh); if available, please provide this information for each rate block;
4. Connection, disconnection, reconnection, and late-payment charges; and
5. The total bill.

To the extent that any of the requested information is not available, please provide the remaining data where possible. If another party to this case issued a similar Data Request, please provide a copy of the response to that Data Request.

Response:

Weather normalized monthly billing data by individual customer does not exist. Therefore, we are unable to provide a sample of weather-normalized billing data by customer in an electronic format in any of the rate classes. Total KCP&L actual billing data, as well as, weather normalized, customer growth and annualized rate data by billing determinant, by block (where appropriate), by month, by rate code is provided in the workpapers of the direct filing.

In addition, actual billing data, by customer, by billing determinant, by block (where appropriate), by month for all customers in the Large Power Class has been provided in DR 0113 and DR 1-19 MCEG. Note: This information, while not normally prepared as part of a Direct Filing, has been provided through the DR process based on the limited number of customers included in the Large Power Class.

If a list of specific customers by account number is provided, actual customer data by customer, by billing determinant, by block (where appropriate), by month is available; otherwise, the dataset is too large to output the entire customer population into a spreadsheet in order to select a sample.

Connection, disconnection, reconnection and late payment charges may be produced if a specific account list is provided, but will be in a different format and in a separate list entirely from the above, as it will need to be queried from a different source.
