Hi Barb,

This is a follow-up to our call earlier this week discussing DED's DR 600.1.

After noting DED's concern with the limited sample size of 100-200 customers and wanting to ensure a full year's usage, we looked into alternatives outside our UI tool. Kim Asbury on the team was able to work with Billing to identify a sample list of customers and do a straight query from the CIS system that should meet your needs.

Note that due to these being pulled directly from CIS today (or a couple of days ago), there may be differences between this information and what would've been included in our test year revenues. This is due to timing differences, because our test year revenues were pulled from CIS some time ago and prior period adjustments could have taken place since the time that test year revenues were pulled. However, given you are not attempting to tie out revenues, this should not impact the analysis you're trying to perform.

Please let us know if this will work for you. If so, let us know if it makes sense to just add this to the DR as a supplemental.

Thanks Barb and don't hesitate to reach out with further questions.

Here is 12 months of usage for about 780 customers for residential rate 1RS1A (which is the largest residential rate for KCPL-MO). This rate code has a total of approx. 190,000 customers.

I did leave the amount of the bill segment on here but it includes all riders (like DSIM).
