SUMMARY AND CONCLUSIONS 9

1 REBUTTAL TESTIMONY

2 OF

3 JEFFREY SMITH

4 KANSAS CITY POWER & LIGHT COMPANY
5 CASE NO. ER-2018-0145

6 and

7 KCP&L GREATER MISSOURI OPERATIONS COMPANY
8 CASE NO. ER-2018-0146

9 Q. Please state your name.

10 A. My name is Jeffrey Smith.

11 Q. Are you the same Jeffrey Smith who prepared the Rate of Return Section of
12 the Staff's Cost of Service Report?

13 A. Yes.

14 Q. What is the purpose of your rebuttal testimony?

15 A. The purpose of my rebuttal testimony is to respond to the direct testimony
16 of Robert B. Hevert (Mr. Hevert), and Michael P. Gorman (Mr. Gorman). Mr. Hevert
17 sponsored rate-of-return ("ROR") testimony on behalf of Kansas City Power & Light
18 Company, and KCP&L Greater Missouri Operations Company ("KCPL" and "GMO",
19 respectively). Mr. Gorman sponsored ROR testimony on behalf of The Midwest Energy
20 Consumers Group ("MECG"). I will address the issues related to a fair and reasonable capital
21 structure and allowed ROR to be applied to KCPL's and GMO's electric utility rate base for
22 ratemaking purposes in this proceeding.

1 EXECUTIVE SUMMARY

2 Q. What are the fundamental disagreements you have with Mr. Gorman's and
3 Mr. Hevert's testimony?

4 A. I have fundamental disagreements with each of the witnesses' recommended
5 capital structures, as well as their recommended embedded costs of debt for KCPL. I also
6 disagree with Mr. Gorman's recommended cost of debt for GMO. Each of these issues is
7 expanded upon within its respective section of this testimony. Although I have fundamental
8 disagreements with the inputs and results of each witness's cost of equity ("COE") analyses,
9 their recommended ROEs are within the range of reasonableness; therefore, I will not expand
10 on those fundamental disagreements.

11 Q. Have events in the capital markets the past two months caused a change in the
12 utility industries' cost of capital?

13 A. No. Broader markets have maintained earnings momentum against the
14 backdrop of international trade disputes. Although trade issues have added to uncertainty and
15 volatility in the markets, they have had a minor impact on the cost of capital. Increased
16 volatility has helped utility stocks perform well, marginally increasing their valuation levels.
17 Although this could imply a marginal decrease in the cost of equity, increases in utility bond
18 yields imply an increase in capital costs. I will provide a brief update on the capital markets
19 later in this testimony.

20 SUMMARY OF MR. GORMAN'S AND MR. HEVERT'S COST OF EQUITY
21 ESTIMATES

22 Q. Please summarize Mr. Gorman's estimated COE and resulting recommended
23 allowed ROE.

Rebuttal Testimony of
Jeffrey Smith

1 A. Mr. Gorman's recommended allowed ROE is 9.30%, which is the midpoint of
2 his estimated COE range of 9.10% to 9.50%. Mr. Gorman's COE methodologies included a
3 Discounted Cash Flow ("DCF") model, a Multi-Stage DCF, a Sustainable Growth DCF,
4 a Risk Premium Approach, and a Capital Asset Pricing Model ("CAPM"). Mr. Gorman
5 bases the low end of his range on his DCF and CAPM results, and bases the high end of his
6 range on his risk premium results. Mr. Gorman notes that his recommendation "must be
7 inherently reasonable" because it is the ROE agreed to in the comprehensive settlement of the
8 GPE/Westar merger in Kansas.¹

9 Q. Please summarize Mr. Hevert's estimated COE and the resulting ROE
10 recommendation.

11 A. Mr. Hevert's recommended ROE is 9.85%, which is the low end of his range
12 of COE estimates of 9.75% to 10.50%. Mr. Hevert's COE methodologies included a
13 Constant Growth DCF, a Multi-Stage DCF, a CAPM, and a Bond Yield Plus Risk Premium
14 Approach. Mr. Hevert does not state the basis of the low or high end of his range. However,
15 he does state that he gives more consideration to his CAPM and Risk Premium approaches.²
16 Mr. Hevert notes that, in his opinion, his recommendation is a conservative estimate of
17 the companies' COE, but that he has taken into consideration this Commission's
18 recent decisions.³

19 **CAPITAL MARKET UPDATE**

20 Q. Have there been significant capital market issues in the past two-months?

¹ Gorman, Direct Testimony, p. 5, ll. 8-9.

² Hevert, Direct Testimony, p. 62, ll. 3-7.

³ *Ibid*, p. 5, ll. 3-7.

Rebuttal Testimony of
Jeffrey Smith

1 A. No. However, on June 13, 2018, the U.S. Federal Reserve Open Market
2 Committee raised the Federal Funds Rate from 1.50% - 1.75% to 1.75% - 2.00% as had
3 been anticipated.

4 Q. How have regulated utility stocks performed during the past two-months?

5 A. Similar to the broader markets, although slightly lagging. The average total
6 return for the electric utility proxy group ("electric proxy") and the S&P 500, from the
7 beginning of May to the end of June, were 1.18% and 2.78%, respectively. This compares to
8 average total returns for the first four months of 2018 of -0.76% and -1.20%, respectively.
9 Average dividend yields for the electric proxy group, from the beginning of May to the end of
10 June, increased 2 basis points, to 3.44% from 3.42%, compared to the first four months of
11 2018. From the beginning of May to the end of June, Average Price to Last Twelve Month
12 Earnings ("P/E") ratios for the electric proxy increased to 19.98x, compared to the average
13 P/E ratio of 19.61x for the first four months of 2018.⁴

14 Q. How have utility bonds performed in the past two-months?

15 A. Average utility bond yields have increased approximately 24 basis points,
16 since Staff filed its Cost of Service Report.⁵

17 Q. Have events in the capital markets since Staff filed Direct Testimony changed
18 Staff's recommendation?

19 A. No.

⁴ SNL Financial.

⁵ Mergent Bond Record.

1 CAPITAL STRUCTURE

2 Q. Do the parties agree on the appropriate capital structure for purposes of
3 determining a fair and reasonable allowed ROR to apply to KCPL's rate base?

4 A. No. Although Mr. Gorman and Mr. Hevert agree on KCPL's capital structure,
5 based on a *pro forma* estimate of KCPL's per books subsidiary capital structure as of June 30,
6 2018, Staff relied on the actual March 31, 2018, capital structure based on Great Plains
7 Energy's ("GPE") 10Q for its proposed capital structure. KCPL anticipates that Balance
8 Sheet information to June 31, 2018 will be available August 21, 2018. Staff will update its
9 recommended capital structure for KCPL in Surrebuttal Testimony to reflect updated
10 information and KCPL's actual capital structure as of June 31, 2018.

11 Q. Do the parties agree on the appropriate capital structure for purposes of
12 determining a fair and reasonable allowed ROR to apply to GMO's rate base?

13 A. No. Mr. Hevert's recommendation does not exclude goodwill from GMO's
14 capital structure, causing a higher than reasonable common equity ratio, excessively
15 burdening ratepayers. Although Mr. Gorman removes approximately \$169 million of
16 goodwill from GMO's capital structure, he removes the amount of goodwill reflected on
17 GPE's balance sheet, not the amount reflected on GMO's balance sheet. GMO's balance
18 sheet reflects ** _____ ** of goodwill. Mr. Gorman's failure to remove the correct
19 amount of goodwill from GMO's balance sheet results in a higher than reasonable common
20 equity ratio, excessively burdening ratepayers.

21 Q. Has the Commission ever ruled on whether or how much goodwill should be
22 removed from GMO's capital structure?

Rebuttal Testimony of
Jeffrey Smith

1 A. Yes. In the Report and Order of the Great Plains Energy/Westar Energy
2 merger case, Case No. EM-2018-0012, the Commission noted the key points of financing
3 conditions in the January 12, 2018 non-unanimous stipulation and agreement, specifically,
4 that goodwill shall not be included in the revenue requirement of KCPL or GMO.⁶

5 Q. Why is it important to remove goodwill from the capital structure?

6 A. From a regulatory perspective, it is important to remove goodwill from the
7 capital structure because it protects ratepayers from having to pay higher rates because of
8 changes to utility ownership. Ratepayers will be forced to unreasonably pay higher rates if
9 the goodwill balance from GMO's balance sheet is not removed because goodwill arbitrarily
10 inflates the value of assets on a company's balance sheet, distorting the value of equity in its
11 capital structure, leading to a capital structure unequally weighted with a higher cost of capital
12 component, resulting in a higher revenue requirement.

13 Q. How does the CFA Institute characterize goodwill?

14 A. The Chartered Financial Analyst curriculum states:

15 When one company acquires another, the purchase price is allocated
16 to all the identifiable assets (tangible and intangible) and liabilities
17 acquired, based on fair value. If the purchase price is greater than the
18 acquirer's interest in the fair value of the identifiable assets and
19 liabilities acquired, the excess is described as goodwill and is
20 recognized as an asset... The subject of recognizing goodwill in
21 financial statements has found both proponents and opponents
22 among professionals. The proponents of goodwill recognition assert
23 that goodwill is the present value of excess returns that a company is
24 able to earn. This group claims that determining the present value of
25 these excess returns is analogous to determining the present value of
26 future cash flows associated with other assets and projects.
27 Opponents of goodwill recognition claim that the prices paid for
28 acquisitions often turn out to be based on unrealistic expectations,
29 thereby leading to future write-offs of goodwill... The recognition

⁶ *In the Matter of the Application of Great Plains Energy Incorporated for Approval of its Merger with Westar Energy, Inc.* Case No. EM-2018-0012, (*Report and Order*, issued May 24, 2018) at p. 13.

and impairment of goodwill can significantly affect the comparability of financial statements between companies. Therefore, analysts often adjust the companies' financial statements by removing the impact of goodwill. Such adjustments include: excluding goodwill from balance sheet data used to compute financial ratios, and excluding goodwill impairment losses from income data used to examine operating trends.⁷

2 _____
3 _____
4 _____^{10 **}

5 **EMBEDDED COST OF DEBT**

6 Q. What embedded costs of debt are proposed by Mr. Gorman and Mr. Hevert?

7 A. Mr. Gorman does not state his recommended cost of debt for KCPL.
8 For GMO, Mr. Gorman recommends a cost of debt of 4.79%, based on his calculations of
9 hypothetical refinancing cost for affiliate loans payable to GPE. Mr. Hevert recommends a
10 cost of debt of ** _____ ** for both KCPL and GMO.

11 Q. Do you agree with Mr. Gorman's proposed cost of debt for GMO?

12 A. No. Mr. Gorman's proposal is not based on known and measurable costs.
13 I recommend the Commission adopt my updated cost of debt, updated to May 31, 2018,
14 reflecting GMO's actual cost of debt of ** _____ . **

15 Q. Do you agree with Mr. Hevert's cost of debt recommendation for KCPL
16 and GMO?

17 A. I agree with Mr. Hevert's proposed cost of debt for GMO. However,
18 I do not agree with Mr. Hevert that the cost of debt for KCPL is the same as that of GMO.
19 Although Mr. Hevert chose two separate and distinct capital structures for each company,
20 he failed to consider differences in their costs of debt, ascribing GMO's higher cost of debt of
21 ** _____ ** to both companies. KCPL's actual cost of debt, updated to May 31, 2018,
22 is ** _____ . **

_____ ^{10 **}
_____ **

1 SUMMARY AND CONCLUSIONS

2 Q. Please summarize the conclusions of your rebuttal testimony.

3 A. Mr. Hevert's and Mr. Gorman's recommended ROEs of 9.85% and 9.30%,
4 respectively, are within the range of what Staff considers fair and reasonable, considering the
5 Commission's recent ROE decision in the Spire rate cases.

6 The Commission should reject both Mr. Hevert's and Mr. Gorman's recommended
7 capital structures for KCPL because they were based on KCPL's *pro forma* estimated capital
8 structure. Actual capital structure data is available as of March 31, 2018. Staff will update its
9 capital structure recommendation for KCPL in Surrebuttal Testimony to reflect actual capital
10 structure data to June 31, 2018. The Commission should reject Mr. Hevert's and
11 Mr. Gorman's recommended capital structures for GMO because they do not consider the full
12 effects of goodwill on customers or GMO, and allow GMO excess returns.

13 The Commission should disregard Mr. Gorman's adjusted cost of debt for GMO
14 because it is not known and measurable. Instead, the Commission should set GMO's cost of
15 debt at its actual cost, ** _____. ** The Commission should disregard Mr. Hevert's
16 recommended ** _____ ** cost of debt for KCPL. Instead the Commission should set
17 KCPL's cost of debt at its actual cost, ** _____. **

18 Q. Does this conclude your rebuttal testimony?

19 A. Yes.
