D. DNAL Mileage

DNAL Mileage applies only to the DNAL BSA and provides for the transmission facilities between the serving wire center of the customer's designated premises and the Telephone Company end office switch where the DNAL terminates. DNAL Mileage is portrayed in mileage bands. There are two rates that apply for each band: a flat rate per band and a rate per mile.

6.1 General-(Continued)

6.1.3 Design Layout Report

(RT)

At the request of the customer, the Telephone Company will provide to the customer the makeup of the facilities and services provided from the customer's premises to the first point of switching. This information will be provided in the form of a Design Layout Report. The Design Layout Report will be provided to the customer at no charge and will be reissued or updated whenever these facilities are materially changed.

6.1.4 Acceptance Testing

At no additional charge, the Telephone Company will, at the customer's request, cooperatively test, at the time of installation, the following parameters: loss, C-notched noise, C-message noise, 3-tone slope, d.c. continuity and operational signaling. When the Local Transport is provided with Interface Groups 2 through 10 and the Transport Termination is two-wire (i.e., there is a four-wire to two-wire conversion in Local Transport), balance parameters (equal level echo path loss) may also be tested.

6.1.5 Ordering Options and Conditions

Switched Access Service is ordered under the Access Order provisions set forth in Section 5, preceding. Also, included in that section are other charges which may be associated with ordering Switched Access Service (i.e., Service Date Change Charges).

6.1.5 Design Layout Report

The Telephone Company will provide to the IC the makeup of the facilities and services provided to the first point of switching. This information will be provided in the form of a Design Layout Report. The Design Layout Report will be provided to the IC at no charge.

6.1.6 Acceptance Testing

At no additional charge, the Telephone Company will, at the IC's request, cooperatively test, at the time of installation, the following parameters: loss, 3-tone slope, d.c. continuity and operational signaling. When the Access Connection is provided with a Type 2 interface and the Transport Termination is two-wire (i.e., there is a four-wire to two-wire conversion in Local Transport), balance parameters (equal level echo path loss) may also be tested.

If acceptance tests are not started within 30 minutes after the scheduled appointment time for such tests, as negotiated between the Telephone Company and the IC, additional charges will apply, as set forth in Section 13, Paragraph 13.2.6, following.

6.1.7 Ordering Options and Conditions

There are two ordering options available to the IC in the provision of Switched Access Service. These are:

- Access Order
- Planned Facilities Order

These options are set forth in detail in Section 5., preceding, as are the conditions under which the options may be elected. Cancellation charges associated with these options are also included in Section 5, preceding.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups

(RT) The provision of each Feature Group requires Local Transport facilities and
(CT) the appropriate Local Switching functions.

There are three specific transmission performances (i.e., Types A, B and C) that have been identified for the provision of Feature Groups. The specific performance provided is dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem.

Feature Groups are arranged for either originating, terminating or two-way calling, based on the IC end office switching busy-hour minutes of capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the IC terminal location. Terminating calling permits the delivery of calls from the IC terminal location to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Telephone Company will determine the type of calling to be provided unless the IC specifies in its order that a different type of directional calling is to be provided. In such cases, the Telephone Company will work cooperatively with the IC to determine directionality.

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

There are various features available with the Feature Groups. These additional features are provided as Local Transport, Common Switching, Transport Termination or Line Termination features.

Following are detailed descriptions of each of the available Feature Groups. Each Feature Group is described in terms of its specific physical characteristics and calling patterns, the transmission performances with which it is provided, the features available for use with it and the standard testing capabilities.

(AT) The Common Switching and Transport Termination features, which are described in Paragraphs 6.3, 6.4 and 6.5, following, unless specifically stated otherwise, are available at all Telephone Company end office switches.

6.2.1 Feature Group A (FGA)

A. Description

1. FGA is provided in connection with Telephone Company electronic and electromechanical end offices. At the option of the IC, FGA is provided on a single or multiple line group basis and is arranged for originating calling-only, terminating calling-only or two-way calling. FGA is arranged for use by the Interexchange Carrier in the provision of its FX/ONAL service or MTS/WATS-type Service.
2. FGA provides a line side termination at the first point of switching. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the IC.
3. The Telephone Company shall select the first point of switching, within the selected LATA, at which the line side termination is to be provided unless the IC requests a different first point of switching and Telephone Company facilities and measurement capabilities are available to accommodate such a request. The first point of switching must comply with Section 2, Paragraph 2.1.2., A.
4. A seven-digit local telephone number assigned by the Telephone Company is provided for access to FGA switching in the originating direction. The seven-digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX.

Following are detailed descriptions of each of the available Feature Groups. Each Feature Group is described in terms of its specific physical characteristics and calling patterns, the transmission performances with which it is provided, the optional features available for use with it and the standard testing capabilities.

The Common Switching and Transport Termination optional features, which are described in Paragraph 6.3, following, unless specifically stated otherwise, are available at all Telephone Company end office switches.

6.2.1 Feature Group A (FGA)

A. Description

1. FGA is provided in connection with Telephone Company electronic and electromechanical end offices. At the option of the IC, FGA is provided on a single or multiple line group basis and is arranged for originating calling-only, terminating calling-only or two-way calling. FGA is arranged for use by the IC in the provision of its foreign dial tone service, second dial tone service or switched private network service.
2. FGA provides a line side termination at the first point of switching. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the IC.
3. The Telephone Company shall select the first point of switching, within the selected LATA at which the line side termination is to be provided unless the IC requests a different first point of switching and Telephone Company facilities and measurement capabilities are available to accommodate such a request.

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

6.2.1 Feature Group A (FGA)-(Continued)

A. Description-(Continued)

4. (Continued)

If the customer requests a specific seven-digit telephone number that is available and the necessary facilities and/or equipment are available to the customer, the requested number will be assigned to the customer.

5. FGA switching, when used in the terminating direction, is arranged with dial tone start-dial signaling. When used in the terminating direction, FGA switching may, at the option of the IC, be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.
6. No address signaling is provided by the Telephone Company when FGA Switching is used in the originating direction. Address signaling in such cases, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.
7. FGA switching, when used in the terminating direction, may be used to access valid NXX's in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits) may also be accessed by FGA services. FGA may be used for the termination of ACIS, 800 and 900 Access Service calls. FGA may also be used for completion of calls to WATS Access Line Service. Charges for FGA terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available. Additional non-access charges will also be billed on a separate account for (1) an operator surcharge, as set forth in the Local Exchange Tariffs, for local operator assistance (0- and 0+) calls; (2) calls to certain community information services, for which rates are applicable under Telephone Company exchange service

When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.

6. No address signaling is provided by the Telephone Company when FGA Switching is used in the originating direction. Address signaling in such cases, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

7. FGA switching, when used in the terminating direction, may be used to access valid NXX's in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits) may also be accessed by FGA services. FGA may be used for the termination of 800 and 900 Access Service calls. FGA may also be used for completion of calls to WATS Access Line Service. Charges for FGA terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available. Additional non-access charges will also be billed on a separate account for (1) an operator surcharge, as set forth in the Local Exchange Tariffs, for local operator assistance (0- and 0+) calls; (2) calls to certain community information services, for which rates are applicable under Telephone Company exchange service

A. Description-(Continued)

4. (Continued)

If the customer requests a specific seven-digit telephone number that is available and the necessary facilities and/or equipment are available to the customer, the requested number will be assigned to the customer.

- 5. FGA switching, when used in the terminating direction, is arranged with dial tone start-dial signaling. When used in the terminating direction, FGA switching may, at the option of the IC, be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.
- 6. No address signaling is provided by the Telephone Company when FGA Switching is used in the originating direction. Address signaling in such cases, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

A. Description-(Continued)

- 5. FGA switching, when used in the terminating direction, is arranged with dial tone start-dial signaling. When used in the terminating direction, FGA switching may, at the option of the IC, be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.
- 6. No address signaling is provided by the Telephone Company when FGA Switching is used in the originating direction. Address signaling in such cases, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of Access Connections and Local Transport provided.
- 7. FGA switching, when used in the originating direction, may be used to access valid NXX's in the LATA, local operator service (0- and 0+), directory assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair (611 where available), time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits). Charges for FGA terminating calls requiring operator assistance or calls to 611 or 911 will only apply where sufficient call details are available. For calls to services of other IC's, additional charges may apply. Additional charges will also be billed for (1) an operator surcharge, as set forth in the Local Exchange Tariffs, for local operator assistance (0- and 0+) calls; (2) calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, e.g. 1976 (DIAL-IT) Network Services, and, (3) IC call charges in accordance with the tariffs in force when the Telephone Company performs the billing for such IC calls. For calls to Directory Assistance (411 where available and 555-1212), Local Transport rates for FGA Switched Access Service will not apply. Instead, Local Transport for calls to this service is subject to a per call rate as set forth in Paragraph 9.6, B., following. Additionally, calls to Directory Assistance are subject to the Directory Assistance Service Call rate set forth in Paragraph 9.6, A., following.

- IntraLATA Extensions

C. Transmission Performance

FGA is provided with either Type B or Type C Transmission Performance. The parameters associated with these performances are guaranteed to the first point of switching. Type C Transmission Performance is provided with Interface Group 1 and Type B is provided with Interface Groups 2 through 10. Type DB Data Transmission Parameters are provided with FGA to the first point of switching.

first point of switching except when optional extensions are provided. Type C Transmission Performance is provided with Interface Group 1, and Type B is provided with Interface Groups 2 through 10. Type DB Data Transmission Parameters are provided with FGA to the first point of switching.

D. Testing Capabilities

FGA is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100 type) test line and milliwatt (102 type) test line. In addition to the tests described in Paragraph 6.1.4, preceding, which are included with the installation of service, Additional Cooperative Acceptance Testing and Nonscheduled Testing are available for FGA as set forth in Paragraph 13.3.5, following.

6.2.2 Feature Group B (FGB)

A. Description

(FC)

1. FGB, when directly routed to an end office (i.e., provided without the use of an access tandem switch), is provided at appropriately equipped Telephone Company electronic end office switches. When provided via Telephone Company designated electronic access tandem switches, FGB switching is provided at Telephone Company electronic and electromechanical end office switches.
2. FGB is provided as trunk side switching. The switch trunk equipment is provided with Wink Start Address Signaling or Immediate Dial Pulse Address Signaling and answer and disconnect supervisory signaling.
3. FGB switching is provided with multifrequency address signaling in both the originating and terminating directions. Except for FGB switching provided with the automatic number identification (ANI) or rotary dial station signaling arrangements as set forth in Paragraph 6.4, following, any other address signaling in the originating direction, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

- 4. The uniform access code for FGB switching is either 950-0XXX or 950-1XXX. These uniform access codes will be the assigned access numbers of all FGB Switched Access Service provided to the customer by the Telephone Company. FGB Switched Access may also be used to originate 800 and 900 Access Service until such time as FGD becomes available in the end office. FGB may also be used for completion of calls to WATS Access Line Service. The customer's end user is not required to dial an access code for originating 800 and 900 Access Service provided with Feature Group B Switched Access Service. FGB may be used to terminate 800 and 900 Access Service calls.

- 5. FGB switching, when used in the terminating direction, may be used to access valid NXX's in the LATA, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits). When directly routed to an end office, only those valid NXX codes served by that end office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from an FGB trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-0XXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411 where available and 555-1212), service codes 611 and 911 or 10XXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGB switching is combined with Directory Assistance switching. The combination of FGB Switched Access Service with DA service is provided as set forth in Section 9., following. FGB, in the terminating direction, may not be (1) switched to access another Feature Group B, C or D in the same LATA and (2) switched to access a BSA-B, BSA-C or BSA-D in the same LATA and (3) used to terminate originating FGC, FGD, BSA-C or BSA-D calls.

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

6.2.2 Feature Group B (FGB)-(Continued)

A. Description-(Continued)

(CT)

- 5. FGB switching, when used in the terminating direction, may be used to access valid NXX's in the LATA, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits). When directly routed to an end office, only those valid NXX codes served by that end office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from an FGB trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411 where available and 555-1212), service codes 611, 911 or 101XXXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGB switching is combined with Directory Assistance switching. The combination of FGB Switched Access Service with DA service is provided as set forth in Section 9., following. FGB, in the terminating direction, may not be (1) switched to access another Feature Group B, C or D in the same LATA and switched to access a BSA-B, BSA-C or BSA-D (3) used to terminate originating FGC, FGD, BSA-C or BSA-D calls.
- 6. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGB switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGB switching arrangement provided, e.g., 900 Access Service. Different types of FGB or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

Testing capabilities are the same as those set forth in Paragraph 6.2.4.D., following.

6.2.3 Feature Group C (FGC)

A. Description

(CT)
(CT)
(CT)
(CT)

1. FGC is provided at all Telephone Company end office switches on a direct trunk basis or via Telephone Company-designated access tandem switches. FGC is used for Local Exchange Company to Local Exchange Company traffic. FGC switching is provided to the IC (i.e., providers of MTS and WATS) at an end office switch unless FGD or BSA-D end office switching is provided in the same office. When FGD or BSA-D switching is available, FGC switching will not be provided except for Local Exchange Company to Local Exchange Company traffic.

2. FGC is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink start start-pulsing signals are provided in all offices where available. In those offices where wink start start-pulsing signals are not available, delay dial start-pulsing signals will be provided, unless immediate dial pulse signaling is provided, in which case no start-pulsing signals are provided.

FILED OCT 18 1999

3. FGC is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the IC's customer using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company to equipment to the IC terminal location where the Switched Access Service terminates. Such called party number

Public Service Commission

6.2.2 Feature Group B (FGB)-(Continued)

(MT) C. Transmission Performance

FGB is provided with either Type B or Type C Transmission Performance. The parameters associated with these performances are guaranteed to the end office when routed directly or to the first point of switching when routed via an access tandem. Type C Transmission performance is provided with Interface Group 1, and Type B is provided with Interface Groups 2 through 10. Type DB Data Transmission Parameters are provided with FGB to the first point of switching.

(MT)

D. Testing Capabilities

Testing capabilities are the same as those set forth in Paragraph 6.2.4.D., following.

6.2.3 Feature Group C (FGC)

A. Description

1. FGC is provided at all Telephone Company end office switches on a direct trunk basis or via Telephone Company-designated access tandem switches. FGC switching is provided to the IC (i.e., providers of MTS and WATS) at an end office switch unless Feature Group D end office switching is provided in the same office. When FGC switching is available, FGC switching will not be provided.
2. FGC is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink start start-pulsing signals are provided in all offices where available. In those offices where wink start start-pulsing signals are not available, delay dial start-pulsing signals will be provided, unless immediate dial pulse signaling is provided, in which case no start-pulsing signals are provided.
3. FGC is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the IC's customer using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company to equipment to the IC terminal location where the Switched Access Service terminates. Such called party number

6.2.3 Feature Group C (FGC)

A. Description

1. FGC is provided at all Telephone Company end office switches on a direct trunk basis or via Telephone Company-designed switches. FGC switching is provided to the IC (i.e., providing MTS and WATS) at an end office switch unless Feature Group D end office switching is provided in the same office. When FGD switching is available, FGC switching will not be provided.
2. FGC is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink start start-pulsing signals are provided in all offices where available. In those offices where wink start start-pulsing signals are not available, delay dial start-pulsing signals will be provided, unless immediate dial pulse signaling is provided, in which case no start-pulsing signals are provided.
3. FGC is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the IC's customer using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company to equipment to the IC-terminal location where the Switched Access Service terminates. When routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed. When routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed. For calls to services of other IC's, additional charges may apply. Where measurement capability exists, the IC will also be billed additional charges for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, e.g., 976 (DIAL-IT) Network Services. Calls in the terminating direction will not be completed to 950-10XX access codes, local operator assistance (0- and 0+), service codes (611 and 911 where available and 10XX access codes. Calls will not be completed to Directory Assistance, (411 where available and 555-1212) unless FGC switching is combined with Directory Assistance switching. FGC may not be switched, in the terminating direction, to Switched Access Service Feature Groups A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z.

appropriate codes) when such services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from a FGD trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (NPA-555-1212 or 555-1212) when FGD switching is combined with Directory Assistance switching. The combination of FGD Switched Access Service with DA Service is provided as set forth in Section 9., following. FGD may not be switched, in the terminating direction, to access another Feature Group B, C or D in the same LATA or switched to access a BSA-B, BSA-C, or BSA-D in the same LATA.

5. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

(CT)

6. The uniform access code for FGD switching is a 101XXXX. A single access code will be the assigned number of all FGD access provided to the customer by the Telephone Company. No access code is required for calls to a customer over FGD Switched Access Service (this includes MicroLink I Access Capability provided in conjunction with FGD) if the end user's telephone exchange service is arranged for presubscription to that customer, as set forth in Section 13, following. FGD Switched Access may be originated using the 950-XXXX access code if the customer requests the FGD or BSA-D with 950 Access feature.

6.2.4 Feature Group D (FGD)-(Continued)

A. Description-(Continued)

6. (Continued)

Where no access code is required, the number dialed by the IC's customer shall be a seven or ten-digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven- to twelve-digit number may be dialed. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 01 + CC + NN or 011 + CC + NN. When the 10XX access code is used, FGD switching also provides for dialing the digit 0 for access to the IC's operator, 911 for access to the Telephone Company's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the IC's terminal location.

7. FGD switching will be arranged to accept calls from telephone exchange service locations without the need for dialing 10XX uniform access code. Each telephone exchange service line may be marked with a presubscription code to identify which 10XX code its calls will be directed to for interLATA service. Presubscription codes are applied as set forth in Section 13, following.

Where no access code is required, the number dialed by the IC's customer shall be a seven or ten-digit number for calls in the North American Numbering Plan (NANP). FGD Switched Access Service may also be used to originate and terminate 800 NPAS and 900 Access Service. The customer's end user is not required to dial an access code for originating 800 NPAS and 900 Access Service provided with FGD Switched Access Service. 800 NPAS and 900 Access Service calls dialed with an access code will be blocked by the Telephone Company. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX. When the 10XXX access code is used, FGD switching also provides for dialing the digit 0 for access to the IC's operator, 911 for access to the Telephone Company's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the IC's terminal location.

7. When a customer changes an existing FGB to FGD in the same end office, end users may dial either the previous FGB access code or the new FGD access code. This arrangement will be provided at the customer's request, for a maximum period of 90 days where facilities are available. In addition, use of the FGB access code may continue from public coin, coinless and hotel classes of service, until the customer requests otherwise.

(CT) The customer must be prepared to differentiate between 950-XXXX calls and the other FGD calls on the same trunks by using the signaling described in Technical Reference PUB. TSY-000064 LATA Switching System General Requirements. All ~~access~~ minutes will be rated as FGD.

8. A WATS Access Line may, at the option of the customer, be provided for use with FGD Switched Access Service. A WATS Access Line provides a connection between a customer's end user's premises and a Telephone Company end office switch capable of performing the necessary screening functions for 800 Service, WATS or similar services and is provided only for use at the closed end of such services.

WATS Access Lines are arranged for either originating calling only or terminating calling only. They are provided with rotary dial or dual tone multifrequency address signaling and either loop start or ground start supervisory signaling. The choice of the type of signaling is at the option of the customer.

6.2.4 Feature Group D (FGD)-(Continued)

A. Description-(Continued)

8. (Continued)

WATS Access Lines are provided as either an effective two-wire or effective four-wire transmission path. Each transmission path is provided with Standard Transmission Specifications and Data Transmission Parameters as set forth in Paragraph 6.4., following. When optional extensions are provided, the echo control limits are not applicable. At the option of the customer, the WATS Access Line may be ordered with the Improved Two-Wire Voice Transmission Specifications or a DS1 digital interface.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features

6.3.1 Common Switching Optional Features

Following are descriptions of the various optional features that are available in lieu of, or in addition to, the standard features provided with the feature groups. They are provided as either common switching or transport termination options.

A. Call Denial on Line or Hunt Group

This option allows for the screening of terminating calls within the LATA, and for the completion only of calls to 411, 611, 911, 800, 555-1212, and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices. It is available with Feature Group A.

B. Service Code Denial on Line or Hunt Group

This option allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0- and N11 (e.g., 411, 611 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices. It is available with Feature Group A.

C. Hunt Group Arrangement

This option provides the ability to sequentially access one of two or more line side connections in the originating direction, when the access code of the line group is dialed. This feature is provided in all Telephone Company end offices. It is available with Feature Group A.

D. Uniform Call Distribution Arrangement

This option provides a type of multi-line hunting arrangement which provides for an even distribution of calls among the available lines in a hunt group. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with Feature Group A.
