SECTION 3: APPLICATIONS OF RATES3.1 Introduction

The regulations set forth in this section govern the application of rates for services contained in other sections of this tariff.

3.2 Charges Based on Duration of Use

Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A) Calls are measured in durational increments identified for each service. All calls which are fractions of a measurement increment are rounded-up to the next whole unit.
- B) Timing on completed calls begins when the called party answers the call. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.
- C) Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.
- D) Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E) All times refer to local time.

SECTION 3: APPLICATIONS OF RATES3.3 Rates Based Upon Distance

Where charges for a service are specified based upon distance, the following rules apply:

- A) Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in the Local Exchange Routing Guide issued by Bellcore, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as a dedicated Toll Free Service or WATS access line), the Company will apply the rate center of the Customer's main billing telephone number.

- B) The airline distance between any two rate centers is determined as follows:

- 1) Obtain the "V" (vertical) and "H" (horizontal) coordinates for each rate center from the above-referenced Bellcore document.
- 2) Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.
- 3) Square each difference obtained in step (2) above.
- 4) Add the square of the "V" difference and the square of the "H" difference obtained in step (3) above.
- 5) Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
- 6) Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

7) FORMULA =
$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

5.8 ISDN Primary Rate Interface (PRI) Service

ISDN PRI is a competitive digital business telecommunications service offered to all customers located within St. Louis, Missouri LATA 520. ISDN PRI is a switched service that provides the end user with clear channel signaling (64Kbs) in increments of 24 channels formatted within a T1 (1.544 Mbps) allowing such uses as carrying voice traffic, packetized data, or acting as common trunks. ISDN PRI end users will connect their CPE equipment to The Company's central office via T1 connections. All Customer Provided Equipment (CPE) used with Company ISDN PRI is required to conform with the Bellcore Technical Reference Specifications as used by The Company: ISDN Primary Rate Access Transport System Requirements (a module of TSGR, FR-440), Issue Number 01; Technical Reference: TR-TSY-000754.

5.8.1. Standard Features for Circuit Switched Voice and Circuit Switched Data ServicesA) Call by Call for Trunk Groups

Allows Circuit Switched Voice and Circuit Switched Data Services to enable over the Company ISDN PRI trunk to share "B" channels and arrange them as a single trunk group.

This allows incoming and outgoing Circuit Switched Voice and Data calls to utilize "B" Channels on a call by call basis. (Without this capability, each service would require "B" channel.) "B" Channel Packet Switched Data Service cannot utilize this capability. ISDN PRI provides the end user with fractional T1 capabilities by using multiple B channels as required to support the request for aggregate bandwidth of each application thus using SS7 interconnection trunks between The Company and Southwestern Bell Telephone. All of the 23 channels (24 where technology permits) are usable as stand alone trunk groups. Trunk groups can be equipped with Direct Inward Dial (DID) functionality.

SECTION 5: LOCAL EXCHANGE SERVICE5.8 ISDN Primary Rate Interface (PRI) Service (cont'd.)5.8.1. Standard Features for Circuit Switched Voice and Circuit Switched Data Services (cont'd)

B) Caller Name and Number (Caller ID) Capability

All calling numbers presented to the services working on the ISDN PRI connection can be delivered to the customer's CPE, including calls made to Direct Inward Dialing Service telephone numbers.

C) Clear Channel Capability

ISDN PRI uses a standard 23b +D channel format providing "B" channels solely used for customer applications, since all signaling and control functions are handled by the "D" channel. This allows up to 64 Kbps access on each "B" channel and multiple B channels can be configured together in order to satisfy bandwidth requirements required to pass customer information to distant end terminations where technically feasible via Company ISDN PRI connections. ISDN PRI also allows multiple T1s to be configured as one user group using a single D channel for signaling support thus increasing available bandwidth.

D) Digital Voice Transmission

All voice calls are converted from an analog into a digital format to be transported across the network.

D) "D" Channel Control of Multiple Prime

	Monthly Recurring Charge	Non Recurring Charge
D-Channel	\$50.00	\$50.00

Utilizes a single "D" channel to provide signaling and control for multiple ISDN PRI connections within a defined group. This allows the end user an additional bandwidth of 1.544 Mbs for each additional PRI port connection.

F) Equal Access Calling

Allows the customer to predefine an interexchange carrier or randomly access an interexchange carrier for each Trunk Group enabled. The carrier designation can be changed for charges as filed for the State of Missouri with the F.C.C. in Broadwing Communications LLC Tariff F.C.C. No. 2.

5.8.2 Optional Features for Circuit Switched Voice and Circuit Switched Data Services

A) Backup "D" Channel Arrangement

Provides backup for a primary "D" channel under those circumstances where multiple ISDN Prime connections share a "D" single channel. A predetermined "D" channel on another PRI connection would automatically take over call control and signaling functions.

B) System Intercommunication Service

Allows Company ISDN PRI "B" channels to connect to a Centrex business system or another Company ISDN PRI that originates in the same central office. This feature is offered on a per trunk group basis only.

Basic Trunks or Digital Trunks. DID service transmits the dialed digits for all incoming calls allowing the Customer's PBX to route incoming calls directly to individual stations corresponding to each individual DID number. Charges for DID capability and DID number blocks apply in addition to charges specified for Basic Trunks or Digital Trunks in Sections 5.2, 5.4 and 5.6, respectively.

So the Company may efficiently manage its number resource, the Company, at its sole discretion, reserves the right to limit the quantity of DID number blocks a Customer may obtain. Requests for

30 or more DID number blocks must be provided to the Company in writing no less than five (5) months prior to activation. In addition, the Company reserves the right to review vacant DID stations or stations not in use to determine their utilization. Should the Company determine, based

on its own discretion, that there is inefficient number utilization, the Company may reassign the DID numbers.

The Customer has no property right to the telephone number or any other call number destination associated with DID service furnished by the Company, and no right to the continuance of service through any particular end office. The Company reserves the right to change such numbers, or the

end office designation associated with such numbers, or both, assigned to the Customer, whenever

the Company deems it necessary to do so in the conduct of its business.

¹ For Customers with multiple premises served by the Company, the Company will arrange for a listing of the main billing telephone number at each premise.
