3. Calculation of Charges and Distance

- 3.1 Usage charges are based on the actual usage of Company's Network.
- 3.2 Charges for Company's service(s) are based on the distance and duration of the call, monthly usage, and the rate period (Day, Evening, Night) when the call is placed.
- 3.3 Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call. For the purpose of determining airline mileage, vertical and horizontal grid lines have been established across the United States and Canada. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. This unit is the square root of 0.1, expressed in statute miles. A vertical (V) and a horizontal (H) coordinate is computed for each local exchange company primary serving office and serving office from its latitude and longitude location by use of appropriate map-projection equations. A pair of V-H coordinates locates a primary serving office or serving office for determining airline mileage, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two primary serving offices or serving offices is the airline mileage computed as follows:

FORMULA: 
$$\frac{\sqrt{(V_1 - V_2)^2 + (H_1 - H_2)^2}}{10}$$
