So that Worldmetro can take the necessary steps to terminate and/or transition the Customer's Missouri Local Service in an orderly manner, Customer must notify Worldmetro at least 60 days prior to the end of the one-year term that Customer does not intend to purchase Missouri Local Service from Worldmetro after the end of the one-year term. If Customer continues to use Worldmetro-provided Missouri Local Service after the end of the one-year term, and Customer has not given Worldmetro the required notice that it does not intend to purchase Missouri Local Service from Worldmetro after the end of its one-year term, Customer will be deemed to have committed to a new one-year term for Missouri Local Service. If Customer has entered into a multi-year term commitment for Worldmetro services other than Missouri Local Service, and as part of that commitment, has agreed to an annual billing commitment based in part on Customer's one-year commitment for Missouri Local Service, then for any part of that multi-year term that Customer does not purchase Missouri Local Service, the Customer's annual billing commitment will be reduced proportionately, based on the amount billed for Missouri Local Service compared to the amount billed of other services under the Agreement up to the time of termination.

20.5 INTELENET FULL SERVICE T-1

20.5.1 Service Description

Intelenet (Digital PBX Trunk) Service provides a Customer with a digital connection operating at 1.544 Mbps which is time division multiplexed into 24 individual voice-grade telephonic communications channels, each of which can be used to place or receive one call at a time. Digital Trunks are provided for connection of compatible Customer-provided private branch exchanges (PBX) to the public switched telecommunications network. Each Digital Trunk is provided with dual tone multi-frequency (DTMF) or multi-frequency (MF) signaling, as specified by the Customer. Digital Trunks may be configured into hunt groups with other Company-provided Digital Trunks. The terminal interface for each Digital Trunk Service is a DSX-1 panel.

20.5.2 Direct Inward Dial Service (DID)

DID Service can be purchased as an optional feature in conjunction with Full Service T-1. DID service transmits the dialed digits for all incoming calls allowing the Customer's PBX to route incoming calls directly to individual stations corresponding to each individual DID number.

The Customer is required to purchase at least one DID number block for each DID-equipped trunk or trunk group, or DID-equipped channel or channel group⁽¹⁾. The Company reserves the right to limit the amount of DID numbers that will constitute a block of telephone numbers. Currently, blocks of 20 and 100 DID numbers can be selected. The amount of DID numbers included in a telephone number group will be determined at the sole discretion of the Company, and will reflect the efficient management of the Company's resources. In addition, the Company reserves the right to review vacant DID stations or stations not in use to determine efficient telephone number utilization. Should the Company determine based on its own discretion that there is inefficient number utilization, the Company may either reassign the DID numbers or charge an Underutilization Telephone Number Assignment Fee.

The Customer has no property right to the telephone number or any other call number destination associated with DID service furnished by the Company, and no right to the continuance of service through any particular end office. The Company reserves the right to change such numbers, or end office designation associated with such numbers, or both, assigned to the Customer, whenever the Company deems it necessary to do so in the conduct of its business.

(1) A "group" is a set of Basic Trunks or Digital Trunk channels which have been configured a hunt group.

MCI WORLDCOM ON-NET LOCAL EXCHANGE SERVICE

21.5 Local ISDN Primary Rate Interface (Local ISDN PRI): Local ISDN-PRI is an alternative arrangement for individual local exchange services such as Local Trunk Basic and Local Trunk DID. Local ISDN-PRI is provisioned at the 1.544 Mbps rate via the Primary Rate Interface standard of the Integrated Services Digital Network (ISDN). Local ISDN-PRI provides the Customer with the capabilities of simultaneous access, transmission and switching of voice, data and imaging services via channelized transport.

21.5.1 Local ISDN-PRI Service Arrangement - One or more Service Configurations can be combined to create a Local ISDN-PRI Service Arrangement. Customers may have multiple Local ISDN-PRI Service Arrangements per location, however for each Service Arrangement one Service Configuration 1 must be included. The controlling D channel will always reside on Service Configuration 1.

The D channel is a 64 Kbps channel that carries signaling and control for the B channels. The capabilities of the D channel are contained within the customer's Service Configuration.

The ISDN Digital Facility is ordered separately and not included as part of the Service Configuration.

21.5.1.1 Service Configuration 1 - The first Service Configuration for any Local ISDN-PRI Service Arrangement must be a Service Configuration 1. Service Configuration 1 provides twenty-three (23) 64 Kbps B channels and one (1) primary 64 Kbps D signaling channel. The primary D channel is an-out-of band signaling channel used to control and route all of the B channel traffic within the Local ISDN-PRI Service Arrangement.

21.5.1.2 Service Configuration 2 - This configuration is only available in conjunction with Service Configuration 1. It provides an additional twenty-four (24) 64 Kbps B channels which are controlled by the D channel on Service Configuration 1. Multiple Service Configuration 2s may be associated with a Service Configuration 1 subject to switching equipment limitations.

The bearer (or B) channels are used for information transfer between users. B channels provide the same features as Local Trunk Basic and Local Trunk DID. To receive the DID capability, customers must order separately DID telephone numbers, as found in Section 21.2.2.1 preceding.

21.5.1.3 Service Configuration 3 - This configuration is also only available to subscribers who have a Service Configuration 1. It provides a backup 64 Kbps D channel and twenty-three (23) additional 64 Kbps B channels. The backup D channel will control and route all of the B channel traffic of a single PRI Service Arrangement in the event the D channel on the primary configuration (Service Configuration 1) fails. A maximum of one Service Configuration 3 may be included with each Local ISDN-PRI Service Arrangement. Service Configuration 3 is available subject to switching equipment capabilities.

The bearer (or B) channels are used for information transfer between users. B channels provide the same features as Local Trunk Basic and Local Trunk DID. To receive the DID capability, customers must order separate DID telephone numbers, as found in Section 21.2.2.1 preceding.

21.7.8 Foreign Exchange (FX) Service⁽¹⁾ FX Service enables a Customer to receive Company-provided Local Exchange Access Service at a point(s) outside the Local Exchange Service Area, within that same LATA, that normally serves the customer's location. Customers are prohibited from using FX service to place outbound calls including, but not limited to "911" emergency numbers. This restriction is required in order to assure that emergency calls are routed to the Public Safety Answering Point serving the geographical area associated with the Customer's telephone number. The Company strongly recommends that each Customer maintain at least one telephone exchange service access line bearing an NPA-NXX designation associated with the Customer's actual geographic location for emergency use.

FX Service customers are not eligible to enroll in the On-Net Term Plan or Local On-Net Term Plan discount programs.
