(AT)

A. WATS Access Line Service

WATS Access Line Service is a line side connection that combines Switched Access Service with a dedicated Special Access connection between an end user's premises and the WATS serving office. WATS Access Line Service is available only with Feature Group C and D Switched Access Service. WATS Access Line Service is available in either the originating direction or terminating direction as specified below. WATS Access Line Service used in the terminating direction may only be used to complete 800 Access Service calls. WATS Access Line Service must be used when the customer terminates 800 Access Service calls over Feature Group C or D. WATS Access Line Service will be provided as follows:

- Jointly with the Telephone Company providing intraLATA and the customer providing interLATA calling as specified in the Telephone Company's Wide Area Telecommunications Service Tariff. Jointly provisioned WATS Access Line Service is available in either the originating or terminating direction. When the customer uses Feature Group C or D for the completion of 800 Access Service calling, jointly provisioned WATS Access Line Service must be used until such time as intraLATA 800 Access Service calls can be distinguished from interLATA 800 Access Service calls.

6.3 Common Switching and Transport Termination Optional Features

Following are descriptions of the various optional features that are available in lieu of, or in addition to, the standard features provided with the Feature Groups. They are provided as either Common Switching or Transport Termination options.

CANCELLED

6.3.1 Common Switching Optional Features

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating call within the LATA, and for the completion only of calls to 411, 911, 800, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electro-mechanical end offices.

OCT 16 1987  
BY *214 RS 439*  
Public Service Commission  
MISSOURI

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available in all Telephone Company electronic end offices and electro-mechanical end offices.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

E. Nonhunting Number for Use with Hunt Group or Uniform Call Distribution Arrangement .

This option provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with Feature Group A.

F. Automatic Number Identification (ANI)

This option provides the automatic transmission of a seven- or ten-digit number and information digits to the IC terminal location for calls originating in the LATA, to identify the calling station. The ANI feature is an end office software function which is associated on a call by call basis with (1) all individual transmission paths in a trunk group routed directly between an end office and an IC's terminal location or, where technically feasible, with (2) all individual transmission paths in a trunk group between an end office and an access tandem and a trunk group between an access tandem and an IC's terminal location.

The seven-digit ANI telephone number is available with Feature Groups B and C. With these Feature Groups, technical limitations may exist in Telephone Company switching facilities which require ANI to be provided only on a directly trunked basis. Where direct trunking would not have been provided except as required by the provision of ANI, additional charges will apply for Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following. ANI will be transmitted on all calls except those originating from multiparty lines, coin stations and coinless pay telephones using Feature Group B, or with ANI failure has occurred.

The ten-digit ANI telephone number is only available with Feature Group D. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information digit described below).

Provider will be identified from the dialed 800 number (i.e., 1+800+NXX+XXXX). The 800 Service Provider has the option of receiving the dialed 800 number (i.e., 1+800+NXX+XXXX) or a translated ten-digit POTS number (i.e., 1+NPA+XXXX). For 800 NPAS calls outside of the North American Numbering Plan (NANP), the 800 Service Provider will receive a six digit data base translation.

When an end user originates a 1+800+NXX+XXXX call, the Telephone Company will determine how the call is to be routed, based on the 800 number dialed. If an 800 NPAS call originates in an end office not SSP equipped to provide the customer identification function, the call will be routed to an SSP equipped Telephone Company access tandem. Once the 800 NPAS Provider has been identified, the 800 call, served by the Telephone Company's SSP, will be routed to the 800 Service Providers defined FGD/BSA-D trunk group.

Originating 800 NPAS traffic must be provided over FGD or BSA-D trunk groups. The 800 Service Provider may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate an 800 call. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate an 800 call, the customer is required to deliver 800 calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

800 Access Service Screening Office examining the 800-NXX digits to determine which customer should receive the call. If an 800 Access Service call originates at an office not equipped to provide the customer identification function, the call will be routed to an office at which the function is available.

800 Access Service may be provided as either a joint provided or a non-joint provided service. Under the joint provided option, customers must complete 800 traffic to WATS Access Line Service, while under the non-joint provided option customers may complete their 800 traffic to WATS Access Line Service, Special Access, common lines or other facility arrangements. When WATS Access Lines are utilized for the completion of terminating 800 Access Service traffic, the customer's 800 Access Services within the state of Missouri that terminate on these WATS Access Lines, must all be joint provided, or they must all be non-joint provided.

Joint provided 800 Access Service is an offering which requires 800 traffic to complete on either intrastate WATS Access Line Service as described in (A) preceding, or on interstate WATS Access Line Service which carries both interstate and intrastate 800 traffic as described in the Telephone Company's Interstate Access Tariff PCC No. 68. Under joint provided 800 Access Service, the Telephone company will bill the 800 Access Service customer Switched Access rates for intrastate interLATA 800 usage, and the Telephone Company will bill the end user intrastate 800 Service rates for intrastate intraLATA 800 usage as described in the Wide Area Telecommunications Service Tariff.

Non-joint provided 800 Access Service is an offering which allows 800 traffic to complete on either intrastate WATS Access Line Service as described in (A) preceding, interstate WATS Access Line Service which carries both interstate and intrastate 800 traffic as provisioned in the Telephone Company's Interstate Access Tariff PCC No. 68, common lines, Special Access, or customer provided facilities. Under non-joint provided 800 Access Service, the Telephone Company will bill the 800 Access Service customer Switched Access rates for originating intrastate 800 usage.

(AT) When a customer's end user originates a 1+900+NXX-XXXX or 0+900+NXX-XXXX call, the Telephone Company will perform the customer identification function at a 900 Access Service Screening Office to determine the customer to which the call is to be routed. The customer identification function will consist of the 900 Access Service Screening Office examining the 900-NXX digits to determine which customer should receive the call. If a 900 Access Service call originates at an office not equipped to provide the customer identification function, the call will be routed to a tandem at which the function is available.

(AT) Unless prohibited by technical limitations, originating 1+900 Access Service traffic may, at the option of the customer, be combined in the same FGB, FGC, FGD, BSA-B, BSA-C or BSA-D trunk group with the customer's other Access Service traffic. Where such technical limitations do exist, the Telephone Company will provide notification to the customer prior to

(AT) establishment of 1+900 Access Service. At the option of the customer,  
(AT) 1+900 Access Service traffic which originates from a non-equal access end office may be combined with a customer's equal access Feature Group D or BSA-D Switched Access Service. The arrangement is only available when a customer utilizes tandem-routed Feature Group D or tandem routed BSA-D Switched Access Service.

(AT) When Feature Group D or BSA-D becomes available in an end office, originating 1+900 Access Service traffic from that end office must be provided with Feature Group D or BSA-D.

(AT) 0+900 Access Service is available only when combined with 1+900 Access  
(AT) Service provided with FGD or BSA-D.

The customer may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C, or BSA-D to terminate a 900 Access Service call. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C, or BSA-D is used to terminate 900 Access Service, the customer is required to deliver 900 Access Service calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

Customer report requirements for 900 Access Service media stimulated mass calling events are as specified in Paragraph 6.9.1, B.3., following.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

6.2.5 Miscellaneous Switched Access Service-(Continued)

D. Advanced Carrier Identification Service (ACIS)

General

Advanced Carrier Identification Service (ACIS) is an originating offering utilizing trunk side Switched Access Services from both equal access and non-equal access offices and provides the ability for calls to be delivered to access customers based on the dialed Personal Communication Service (PCS) subscriber number. ACIS will use the dialed PCS subscriber number (e.g., 1+500+NXX-XXXX) to identify the access customer (i.e., the transport carrier) to whom the call will be delivered and then deliver the call to the access customer.

The ACIS functionality will be available in suitably equipped end offices or access tandems. If an ACIS routed call originates in an office not equipped to provide the identification function, the call will be routed to an office where the function is available.

ACIS allows the PCS subscriber to originate calls using one-plus (1+), zero plus (0+) and from public coin phones. The Telephone Company will block an ACIS originated call if it originates through a 101XXXX access code, zero minus (0-) dialing or 0- Transfer Service.

(CT)

Provisioning

Unless prohibited by technical limitations, originating traffic that is routed using ACIS may, at the option of customer, be combined in the same FGB, FGD, BSA-B, BSA-C or BSA-D trunk group with the customer's other Access Service traffic. Where such technical limitations do exist, the Telephone Company will provide notification to the customer prior to establishment of ACIS. At the option of the customer, ACIS routed traffic originating from a non-equal access office may be combined with a customer's equal access FGD or BSA-D Service. This arrangement is only available when a customer utilizes tandem routed FGD or BSA-D. Premium access charges will apply for such originating ACIS usage. When FGD or BSA-D becomes available in an end office, originating ACIS routed traffic from that end office must be provided with FGD or BSA-D.

The customer may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate a call that was routed using ACIS. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate a call that was routed using ACIS, the customer is required to deliver ACIS originated calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (CT) 6.3 Basic Serving Arrangement Descriptions

(AT) BSAs are differentiated by their technical characteristics, e.g., line side or trunk side connection at the Telephone Company entry switch. The trunk side BSA is further differentiated into three Alternatives based upon the manner in which an end user would access the BSA for originating calling, e.g., with or without an access code.

There are various Local Transport features, Local Switching features and Basic Service Elements available with a BSA. Local Transport and Local Switching features are described in Paragraphs 6.1.2, A.2, and 6.4. Basic Service Elements are described in Paragraph 6.6. Unless specifically stated otherwise, these features and BSEs are available at all Telephone Company end office switches.

BSAs are arranged for either originating, terminating or two-way calling, based upon the customer's order specifications. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the customer's premises. Terminating calling permits the delivery of calls from the customer's premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously.

Following are detailed descriptions of each Basic Serving Arrangement and Alternatives. Each BSA is described in terms of its specific physical characteristics and calling patterns. BSA transmission specifications are described in Paragraph 6.3.5. Descriptions of available features are located in Paragraphs 6.1.2, A.2, and 6.4. Descriptions of available BSEs are located in Paragraph 6.5.

#### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)

##### A. General

1. Circuit Switched - Line Side BSA is provided in connection with Telephone Company electronic and electromechanical end offices.
2. Circuit Switched - Line Side BSA provides network access in the form of a line side termination at the first point of switching and provides the basis for selection of Basic Service Elements. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the customer.
3. The customer shall specify the first point of switching within the selected LATA at which the line side termination is to be provided. The first point of switching must comply with Section 2, Paragraph 2.1.2, A., preceding

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA, and for the completion only of calls to 411, 911, 800, 900, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices.

(AT)

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)

###### A. General-(Continued)

4. When an individual customer's Circuit Switched - Line Side BSA is discounted at an end office, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

###### B. Originating Circuit Switched - Line Side BSA (BSA-A)

1. Originating Circuit Switched - Line Side BSA may be utilized in conjunction with the following access services provided under this tariff:

WATS Access Line Service

2. A seven-digit local telephone number assigned by the Telephone Company is provided for access to Circuit Switched - Line Side switching and provides the calling area associated with the exchange in which the local telephone number is assigned. The seven digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX. If the customer requests a specific seven digit telephone number and that number (as well as the necessary facilities and equipment) is available, the requested number will be assigned to the customer.
3. No address signaling is provided by the Telephone Company. If address signaling is required by the customer, it must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### C. Terminating Circuit Switched - Line Side BSA-A

1. Terminating Circuit Switched - Line Side may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 NPAS
- 900 Access Service
- Directory Assistance
- ACIS

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)-(Continued)

##### C. Terminating Circuit Switched - Line Side BSA-A-(Continued)

2. Circuit Switched - Line Side may be used to access valid NXXs in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of the Telephone Company, community information services of an information service provider, and other customers' services may also be accessed by Circuit Switched - Line Side services (by dialing the appropriate digits). Charges for Circuit Switched - Line Side terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available.
3. Circuit Switched - Line Side switching is arranged with dial tone start-dial signaling. Circuit Switched - Line Side switching may be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When Circuit Switched - Line Side switching is provided in a hunt group or uniform call distribution arrangement, all Circuit Switched - Line Side switching will be arranged for the same type of address signaling.

##### 6.3.2 Circuit Switched - Trunk Side BSA

##### A. General

1. Circuit Switched - Trunk Side BSA is provided in connection with Telephone Company electronic end offices and, where facilities permit, electromechanical end offices on a direct trunk basis or via Telephone Company designated access tandem switches.
2. Circuit Switched - Trunk Side BSA is differentiated into three Alternatives which are distinguished by their technical characteristics and the manner in which an end user accesses them in originating calling, e.g., with or without an access code.
3. Each Circuit Switched - Trunk Side Alternative BSA provides the customer with a trunk side access to the Telephone Company's network and provides the basis for the selection of available Basic Service Elements (BSEs).

Following are detailed descriptions of each of the Alternatives available with the Circuit Switched - Trunk Side Basic Serving Arrangement

Issued: March 26, 1993

Effective: April 11, 1993

By R. D. BARRON, President-Missouri Division  
Southwestern Bell Telephone Company  
St. Louis, Missouri

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.2 Circuit Switched - Trunk Side BSA-(Continued)

#### B. Alternative Trunk Side BSA Descriptions

##### 1. Alternative B (BSA-B)

###### a. General

1. When directly routed to an end office (i.e., provided without the use of an access tandem switch), Alternative B is provided at appropriately equipped Telephone company electronic end office switches. When provided via Telephone company designated electronic access tandem switches, Alternative B switching is provided at Telephone Company electronic and electromechanical end office switches.
2. Alternative B is provided as trunk side switching. The switch trunk equipment is provided with wink start address signaling or immediate dial pulse address signaling as well as answer and disconnect supervisory signaling. Alternative B switching is provided with multifrequency address signaling in both the originating and terminating directions.
3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative B switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative B switching arrangement provided, e.g., 900 Access Service. Different types of Alternative B switching may be combined in a single trunk group at the option of the Telephone Company.
4. When all Alternative B switching arrangements are discontinued at an end office or in a LATA, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

(RT)

###### b. Originating Alternative B (BSA-B)

1. Originating Alternative B may be utilized in conjunction with the following access services provided under this tariff:

B. Alternative Trunk Side BSA Descriptions--(Continued)

1. Alternative B (BSA-B)--(Continued)

c. Terminating Alternative B (BSA-B)--(Continued)

2. When directly routed to an end office, only those valid NXX codes served by that end office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. Calls will also be completed to time or weather announcement services of the Telephone Company, community information services of an information service provider and other customers' services (by dialing the appropriate digits), as well as to Directory Assistance (NPA-555-1212 or 555-1212) when Alternative B switching is combined with Directory Assistance switching.

3. Calls in the terminating direction will not be completed to 950-OXXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 10XXX access codes. Alternative B may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative B in the same LATA.

2. Alternative C (BSA-C)

a. General

1. Alternative C is provided in all Telephone Company Access end office switches on a direct trunk basis or via Telephone Company designated access tandem switches. Alternative C is only provided to the provider of MTS/WATS and only at an end office switch until Alternative D is provided in the same office. When Alternative D switching becomes available, Alternative C will not be provided.

3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative C switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative C switching arrangement provided. Different types of Alternative C or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
4. Alternative C is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by the Telephone Company equipment to the customer's premises where the Switched Access Services terminates. Such called party number signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### b. Originating Alternative C (BSA-C)

1. Originating Alternative C may be utilized in conjunction with the following access services provided under this tariff:
  - WATS Access Line Service
  - ACIS
  - 900 Access Service
  - Operator Call Processing Service
2. No access code is required for Alternative C switching. The telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside

(AT) 2. The uniform access code for Alternative D switching is 10XXX or 101XXXX (where XXX or XXXX represents a unique three or four digit number for each access customer). This uniform code will be the assigned access number for all Alternative D Access Service provided to the customer by the Telephone Company. When the 10XXX or 101XXXX access codes are used, Alternative D switching also provides for dialing the digit 0 for access to the customer's operator, 911 for access to the Telephone Company's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the customer's premises. Alternative D Switched Access Service may be originated by using the 950-XXXX access code if the customer requests the FGD or BSA-D with 950 Access feature.

(AT) 3. When a customer changes an existing Alternative B to Alternative D in the same end office, end users (if facilities are available) may dial either the previous Alternative B access code or the new Alternative D access code for a maximum period of 90 days. This arrangement will be provided at the

Calls will also be completed to time or weather announcement services of the Telephone Company, community information services of an information provider, and other customers' services (by dialing the appropriate codes) when the services can be reached using valid NXX codes, as well as to Directory Assistance (NPA-555-1212 or 555-1212) when Alternative D switching is combined with Directory Assistance switching.

3. Calls in the terminating direction will not be completed to 950-OXXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 10XXX access codes. Alternative D may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative D, in the same LATA.

6.3.3 Dedicated Network Access Link (DNAL) BSA

A. General

1. DNAL BSA is provided in connection with Telephone Company electronic end offices where facilities permit.
2. DNAL BSA provides network access in the form of a dedicated two-wire channel using metallic or equivalent facilities and is capable of transmitting varying signals at transmission speeds of up to 30 baud.
3. DNAL BSA is only provided in conjunction with a line side or trunk side BSA to provide a separate link for transmitting signaling or control information required in the use of certain BSEs.
4. DNAL BSA is provided between the customer's designated premises and a Telephone Company switch. Interoffice DNAL mileage is limited in length to five miles.
5. DNAL BSA is subject to DNAL termination and DNAL Mileage as set forth in Paragraph 6.1.2, preceding.
6. DNAL is available with the technical specifications package MT-1 as set forth in Technical Reference TR-NPL-000336.
7. DNAL may be used in conjunction with the following BSEs provided under this tariff:
  - Remote Make Busy
  - Remote Make Busy - Trunk Side
8. There are no features available with DNAL.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.4 Basic Serving Arrangement Features

There are various features available with the Basic Serving Arrangements. These features are provided as Local Transport and Local Switching (i.e., common switching, transport termination or line termination) features.

Certain other features which may be available in connection with Basic Serving Arrangements are provided under the Telephone Company's local or General Exchange service tariffs. These are:

- Custom Calling features (BSA-A)
- Billed Number Screening (BSA-A and BSA-B)
- IntraLATA Extensions (BSA-A)
- TeleBranch<sup>R</sup> (BSA-A)

Following are matrices identifying the Basic Serving Arrangements and the Local Transport and Local Switching features available with each BSA. Descriptions of the features are set forth in Paragraphs 6.1.2, A.2, 6.4.1, 6.4.2, 6.4.3 and 6.4.4, following.

6.3.5 Service Provisioning

A. Design and Traffic Routing of Basic Serving Arrangements

When ordering line side or trunk side Switched Access Service BSAs, the customer may specify routing to be direct to a suitably equipped end office or routing to be through an access tandem switch. The customer is required to specify whether the service should be provided by originating only, terminating only or two-way lines or trunks.

For Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternative B, the line or trunk directionality and traffic routing of the BSA between the customer's premises and the entry switch are determined by the customer's order for service. The Telephone Company will compare the customers' requests with their own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For Circuit Switched - Trunk Side Alternative B, the customer may order the Customer Specification of Local Transport Termination Feature.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### A. Design and Traffic Routing of Basic Serving Arrangements-(Continued)

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment, and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining whether the services is to be routed directly to an end office or through an access tandem switch and the directionality of the service.

#### B. Transmission Specifications

Each line side and trunk side Switched Access Basic Serving Arrangement transmission path is provided with standard transmission specifications. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard specifications (Types A, B, and C). The standard for a particular transmission path is dependent on the BSA, the interface group and whether the service is directly routed or routed via an access tandem. For example, interface Group 1 is provided with Type C and interface groups 2 through 10 are provided with Type A or B transmission specifications. Data transmission parameters are also provided with each BSA transmission path. Upon notification by the customer that the data parameters set are not being met, the Telephone Company will conduct tests independently or in cooperation with the customer, and take any necessary action to insure that the data parameters are met.

For line side and trunk side BSAs, transmission specifications are specified in Technical Reference TR-NPL-000334 in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of Circuit Switched - Trunk Side Alternatives B, C and D are specified in Southwestern Bell Telephone Company Technical Reference PUB 76500.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### B. Transmission Specifications-(Continued)

The specific applications in terms of the BSAs and the interface groups with which the BSA standard transmission performances are provided are described below.

##### 1. Circuit Switched - Line Side

Circuit Switched - Line Side is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the first point of switching except when optional extensions are provided. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Line Side to the first point of switching.

##### 2. Circuit Switched - Trunk Side

#### a. Alternative B

Circuit Switched - Trunk Side Alternative B is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the end office when routed directly, or to the first point of switching when routed via an access tandem. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Trunk Side Alternative B to the first point of switching.

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### B. Transmission Specifications-(Continued)

##### 2. Circuit Switched - Trunk Side-(Continued)

###### b. Alternative C

When BSA-C is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-C is routed via an access tandem, only Type B is provided. Type B transmission specifications are provided with interface groups 2 through 10 whether routed directly to an end office or to an access tandem. Type C transmission specifications are provided with interface group 1 when routed directly to an end office. Type B or Type C transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DB data transmission parameters are provided for the transmission path from the customer's premises to the end office when routed directly to the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office when routed via an access tandem.

###### c. Alternative D

When BSA-D is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-D is routed via an access tandem, only Type A is provided. Type A and B transmission specifications are provided with interface groups 2 through 10. Type C transmission specifications are provided with interface group 1. Type A transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DA data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the end office when directly routed to the end office.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### C. Testing Capabilities

In addition to the acceptance tests described in Paragraph 6.1.4, preceding, (which are included with the installation of the BSA), Additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing, and Nonscheduled Testing are available as described in Section 13, Paragraph 13.3.5 (Testing Services) for line side and trunk side BSAs. The following testing capabilities are available on an ongoing basis for the services provided under this tariff as described below:

#### 1. Circuit Switched - Line Side

In the terminating direction where equipment is available, Circuit Switched - Line Side is provided with seven digit access to balance (100 type) test line and milliwatt (102 type) test line.

#### 2. Circuit Switched - Trunk Side Alternatives B, C and D

In the terminating direction and where equipment is available, Circuit Switched - Trunk Side Alternatives B, C and D are provided with seven digit access to balance (100 type) test line, milliwatt (102 type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105 type) test line, data transmission (107 type) test line, loop around test line, short circuit test line and open circuit test line.

#### 6.3.6 Non-Access Charges

Rates and charges for services other than Switched Access Service, e.g., a customer's interLATA toll message service, may also be applicable when Switched Access Service is used in conjunction with these other services.

C. Hunt Group Arrangement

This feature, available with FGA, provides the ability to sequentially access one of two or more line side connections in the originating direction, when the access code of the line group is dialed. This feature is provided in all Telephone Company end offices. Hunt group arrangements are available for BSA-A as a BSE as described in Paragraph 6.6.2, following.

D. Uniform Call Distribution Arrangement

This feature, available with FGA, provides a type of multiline hunting arrangement which provides for an even distribution of calls among the available lines in a hunt group. Where available, this feature is provided in Telephone Company electronic end offices only. Uniform Call Distribution Arrangement is available with BSA-A as a BSE as described in Paragraph 6.6.2, following.

E. Nonhunting Number Arrangement

This feature, available with FGA, provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. Nonhunting Number Arrangement is available with BSA-A as a BSE as described in Paragraph 6.6.2, following.

F. Automatic Number Identification (ANI)

Available with FGB, FGC, FGD, BSA-B, and BSA-C. (Ten digit ANI/Charge Number Parameter for use BSA-D is provided as a BSE as specified in 6.6.1.

This feature provides the automatic transmission of:

Class of service information indicators, and

A seven or ten digit telephone number to the customer's premises to identify the calling station of calls originating in the LATA.

Public Service Commission

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

F. Automatic Number Identification (ANI)-(Continued)

With Feature Group C, ANI is provided from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required, as with 800 service. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment.

Where ANI cannot be provided, e.g., on calls from 4-party services, information digits will be provided to the IC.

The information digits identify: (1) telephone number is the station billing number - no special treatment required, (2) multiparty line - telephone number is a 4-party line and cannot be identified - number must be obtained via an operator or in some other manner, (3) ANI failure has occurred in the end office switch which prevents identification of calling telephone number - must be obtained by operator or in some other manner, (4) hotel/motel-originated call which requires room number identification, (5) coinless station, hospital, inmate, etc., call which requires special screening or handling by the IC, and (6) call is an Automatic Identified Outward Dialed (AIOD) call from customer premises equipment. The ANI telephone number is the listed telephone number of the customer and is not the telephone number of the calling party. These ANI information digits are available with Feature Groups B, C and D.

Additional ANI information digits are available with Feature Group D only. They include:

1. InterLATA restricted - telephone number is identified line
2. InterLATA restricted - hotel/motel line
3. InterLATA restricted - coinless, hospital, inmate, etc., line

These information digits will be transmitted as agreed to by the IC and the Telephone Company.
