The user can activate/deactivate Call Forward and define a telephone number where all calls will be forwarded. Calls cannot be forwarded to an International Direct Distance Dialing (IDDD) number.

B Call Forward Busy Line

This optional feature forwards calls to a busy station to a predetermined number. Calls cannot be forwarded to an International Direct Distance Dialing (IDDD) number. The user is charged any applicable usage charges for the forwarded call.

SECTION 2 – SERVICE DESCRIPTIONS
(CONT'D)

2.2 Features (cont)

2.2.1 General (cont)

D Call Return

Allows a customer to automatically redial the telephone number of the last incoming call to that line, regardless of whether the call was answered, unanswered, or busy. After the recall is activated, and unless the number is blocked as described below, an announcement of the number is provided to the customer, who then has the choice of either continuing the recall by entering a code, or terminating the recall by hanging up. If the redialed number is busy, a distinctive ring alerts the customer when the number becomes available. If the telephone number of the last incoming call has been blocked through the use of a service such as Caller ID Blocking, the number cannot be redialed.

E Call Trace

Call Tracing allows for the identification and recording of the telephone numbers of some or all of the incoming calls to the telephone line of a customer.

F Call Transfer

Allows Customer to transfer an incoming call to a third party or to add a third party to an existing call, forming a three-party connection. The original party can then leave the call without disconnecting the other parties. Calls can be transferred to any number in the North American Dialing Plan (1-NPA-NXX-XXXX type numbers).

G Call Waiting

Provides a tone to notify customer on an existing call that a second call is waiting.

SECTION 2 – SERVICE DESCRIPTIONS
(CONT'D)

2.2 Features (cont)

2.2.1 General (cont)

H Caller ID

Allows for the automatic delivery of a calling party's number to the called customer. The telephone number is displayed on customer-provided equipment.

I Continuous Redial

Allows a customer to automatically redial the last telephone number dialed. If the called number is busy, the number is redialed for a limited period of time.

J Direct Connect Line

Allows a customer to automatically dial a pre-designated number whenever the originating telephone goes off-hook. This feature is assigned to a phone which is used only for this purpose.

K Hunting

This optional feature routes a call to an idle line in a prearranged group when the called telephone number is busy. Typically this feature is used with the customer's main telephone number and several subtending lines so that the customer can receive calls on several lines, although all calls are placed to the same number. Hunting will not work with Call Forward Busy and Don't Answer

2.9.1 Description

2.10 Direct Inward Dial (DID) Service¹

2.10.1 DID Service is an optional feature which can be purchased in conjunction with Company-provided PBX trunks. DID Service transmits the dialed digits for all incoming calls allowing the Customer's PBX to route incoming calls directly to individual stations corresponding to each individual DID number. Charges for DID central Office termination and DID number blocks apply in addition to charges specified for PBX Trunks. One additional termination charge applies for each DID-equipped PBX Trunk. Telephone numbers are furnished in blocks of 20. Blocks of number groups will be determined at the sole discretion of the Company's resources. Whenever possible, the Company will attempt to provide telephone numbers arranged consecutively in a group, but will not guarantee nor accept responsibility for provision of such an arrangement within or between a block of numbers. In addition, the Company reserves the right to review vacant DID stations or stations not in use to determine efficient telephone number utilization. Should the Company determine, based on its own discretion, that there is inefficient number utilization, the Company may reassign the DID numbers.

¹ Where all numbers in a group have not been connected for service, the Customer is responsible for providing interception of calls to vacant or non-working assigned station lines or telephone numbers by means of attendant intercept or recorded announcement service. The Company will not terminate these numbers to an intercept message on the Customer's behalf.

2.12 Measurement of Service

- 2.12.1 When charges for calls are mileage sensitive, airline mileage is computed as described below. Calls are measured and rounded to the higher full minute from the serving wire center of the Customer's originating location to the serving wire center of the destination of the call, regardless of Company routing. The distance between the serving wire center origination point and that of the destination point is calculated by using the "V" and "H" coordinates as defined by Bell Communications Research (BellCore) and NECA Tariff FCC No. 4 in the following manner:

Step 1 Obtain the "V" and "H" coordinates for the originating and terminating wire centers.

Step 2 Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.

Step 3 Square the differences obtained in Step 2.

Step 4 Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 Divide the sum of the squares obtained in Step 4 by ten (10). Round to the next higher whole number, if any fraction results.

Step 6 Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number, if any fraction is obtained. This is the airline mileage of the call.

Formula:

$$\sqrt{\frac{(V_1V_2) + (H_1H_2)}{10}}$$
