TARIFF FORMAT SHEET

- A. <u>Page Numbering</u> Page numbers appear in the upper-right corner of the sheet. Pages are numbered sequentially. However, new pages are occasionally added to the Tariff. When a new page is added, the page appears as a decimal. For example, a new sheet added between Sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers Revision numbers also appear in the upper-right corner of the page.

 These numbers are used to determine the most current page version on file with the Commission.

 For example, the 4th revised Sheet 14 cancels the third revised Sheet 14. Because of deferrals, notice periods, etc., the most current page number on file with the Commission is not always the Tariff page in effect.
- C. <u>Paragraph Numbering Sequence</u> There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.

4.1.7 Optional Call Control Features

REC'D JUN - 1 1999

4.1.7.A Caller ID Name & Number (Caller ID)

Caller ID. This feature enables the customer to view on a display unit the Calling Party Directory Name and/or Number (CPN) on incoming telephone calls. When Caller ID is activated on a customer's line, the CPN of incoming calls is displayed on the called CPE during the first long silent interval of the ringing cycle.

Per line blocking for the blocking of CPN will be available upon request, at no charge, only to the following entities for lines over which the official business of the agency is conducted, including those at the residences of employees/volunteers, where an executive officer of the agency registers a need for blocking and provides the required certification to the Company: a) private, nonprofit, tax exempt, domestic violence intervention agencies and b) federal, state, and local law enforcement agencies. The CPN will not be transmitted from a line equipped with this capability. Per line blocking is operational on a continuous basis but can be deactivated by the customer by dialing an access code (*82 on a touch tone pad or 1182 on a rotary phone) immediately prior to placing a call.

A customer may prevent the delivery of their calling name and/or number to the called party by dialing an access code (*67 on their touch tone pad or 1167 from a rotary phone) immediately prior to placing a call. The access code will activate per call blocking, which is available at no charge. If the calling party activates blocking, the CPN will not be transmitted across the line to the called party. Instead, Caller ID customers will receive an anonymous indicator. This anonymous indicator notifies the Caller ID customer that the calling party has elected to block the delivery of their name and telephone number.
