PRIVATE LINE SERVICE

2.1 Services and Rates

2.1.1 In addition to the regulations set forth in Sections 1 and 2 of this Tariff applicable to Private Line Services, additional regulations are set forth throughout this Section.

2.1.2 Channels are classified by series and further classified within each series by type. The various series and types are described in terms of circuit characteristics and/or use.

2.1.3 The customer is responsible for the selection of the services, i.e., type of circuit signaling options, jacks and terminating interfaces required to meet his needs. The customer premises equipment, station apparatus and premises wiring must be compatible with the services provided by the Company. The Company has overall responsibility for the Private Line Service (up to the demarcation point on the customer premises at which the interface appears), including the selection of all local channels.

2.1.4 Local Exchange Service rates, rules and regulations apply for the local exchange portion of the total service when Private Line Services are used in connection with Local Exchange Service.

2.1.5 When the number of Private Line Services is such that cable service components are required, such cable service components may be provided specifically for the customer's use and not as a part of the Company's general distributing plant, at charges based upon cost, in lieu of tariff charges, where to do so will result in lower charges to the customer.(1)

2.1.6 The Network Interface for the connection of premises services consists of a standard registration jack or its equivalent and is provided as part of the Private Line Service.

(1) Obsolete to existing service installations at existing locations for existing customers. For existing United States Military establishments, additional cable service components may be provided on a cost basis to meet the National Security and Emergency Preparedness needs of the Military.

PRIVATE LINE SERVICE

2.2 Description of Services

2.2.1 Special Signaling Service-Series 100

- A. These channels are suitable for use with Two-Point or Multi-Point Service within the same LATA subject to the number of point limitations indicated for each type and are provided for use with customer-provided power and signaling equipment and other special signaling services.

It is expressly declared that metallic interoffice service components for this type of service are in continually decreasing supply, and the Company is not obligated to continue to make such additional service components available.

Those local channels used to provide a transmission path to connect with customer premises equipment at a premises are defined in terms of electrical interfaces. Interconnection protection criteria and regulations as described in Section 1.6 shall apply.

The type of local channel offered for termination at a premises for termination in customer premises equipment and systems is:

Type 102 - Transmission Characteristics in Section 2.2.1, C., following.

- B. Type 102 service is provided on an intraLATA interexchange two-point or multi-point (maximum of 26 points) basis.

Service is restricted to no more than three serving offices, including the serving office of the central station all within the same LATA.

- C. Transmission characteristics of Type 102 are as follows:

Type 102 service has a two-wire interface with two-wire service components suitable for low speed, unidirectional series operated signaling and may be implemented by either metallic channels or by other means at the Company's option. If provided by "other means", the transmission specifications are described in the Bell System Technical Reference for low-speed signaling channels.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.2 Sub-Voice Grade Service-Series 200

- A. Sub-Voice Grade service provides, and is designed for, transmission of low speed data at rates up to 75 and up to 150 baud within certain technical specifications. These channels are furnished for half-duplex and duplex operations. The service is not suitable for the transmission of alternating current tones.
- B. The types of local channels and the transmission characteristics offered for termination at a premises for termination in customer premises equipment and systems are as follows:
 - 1. Type 250 - An interface engineered for binary signals at rates up to 75 baud, 20 ± 1 or 62.5 2.5 milliamperes neutral signals (1). The terminal equipment shall deliver no more than 8 percent telegraph distortion and shall be capable of processing received data signals with up to 35 percent telegraph distortion.
 - 2. Type 251 - E1A standard RS232C type interface engineered for binary signals at rates up to 150 baud and the terminal equipment shall deliver no more than 5 percent telegraph distortion and shall be capable of processing received data signals with up to 40 percent telegraph distortion.
 - 3. Type 250 and Type 251 channels are furnished for teletypewriter, data, supervisory control and miscellaneous signaling use.

- (1) The Company has the option of providing 20 or 62.5 milliamperes and will notify the customer of the current level to be supplied. The company will supply the line voltage and provide for the current adjustment. The maximum open circuit voltage across the send data leads at the interface will not exceed 270 volts.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.2 Sub-Voice Grade Service-Series 200 (Continued)

C. Parameters and specifications for sub-voice grade local channels used with customer premises equipment in Section 2.2.2.B, are as follows:

<u>BASIC PARAMETERS</u>	<u>SPECIFICATION OR LIMIT</u>
Channel Signals	Local channels used with customer premises equipment - as specified in Section 2.2.2, B. above. Note that the specifications of channel signals refer to the requirement of the total service offering and not the individual local channel.
Channel Distortion	Local channels used with customer premises equipment - as specified in Section 2.2.2, B. above. Note that the specifications for channel distortion refer to the requirement of the total service offering and not the individual local channel.
Power Requirement	For up to 75 Baud Type - Where the Company provides transmission equipment at the interface. Customer must provide a source of continuous 117 volt, 60 Hz ac power by means of a nonswitched outlet. For up to 150 Baud - Customer must in all cases provide a source of continuous 117 volt, 60 Hz ac power, nonswitched outlet.

The Company will in all cases supply all voltage and current adjustments to the local channel.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400

A. Series 300 local channels for voice grade service are furnished for half duplex (voice or data use) and duplex (data use) operations for oral communications and data communications which operate within certain technical specifications. Unless expressly provided for elsewhere, these are the only channels provided for voice grade transmission. The various types of local channels which are offered for termination are provided on a customer premises as follows:

1. Type 311- Furnished for two point or multipoint voice transmission, Private Line voice or intercommunication line or supervisory control use. Signaling options required to arrange Type 311 for suitable signaling are provided in Section 2 of this Tariff. Limited to five (5) local channels on multipoint service where two-way communication is required.
2. Type 312 - furnished for off-premises main and extension stations associated with premises PBX (or similar) switching systems. Technical specifications are a two-wire interface with effective two-wire service components engineered for 1000 Hz net loss of VLN +4dB.
3. Type 314 - Furnished for tie line use between two premises PBX (or similar) switching systems (314A).

(1) Obsolete-applicable to existing service installations at existing locations for existing customers.

November 7, 1992

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

A. (Continued)

4. Type 320 - Furnished for Type 311, multi-point voice service where more than five (5) local channels are involved and two-way communication is required.

Signaling options required to arrange Series 300 channels for suitable signaling are available at charges specified in Section 2.2.6, following. The application of signaling options currently provided to arrange Series 300 on premises, same building and additional point of termination services has been obsoleted to existing installations at existing locations for existing customers. Signaling charges do not apply to different buildings same premises PBX (or similar) stations.

Bridging charges, per channel bridged, apply when three or more voice grade channels connect at the same location. Bridging charges do not apply to Type 312.

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

B. Series 400 local channels are furnished for use as the customer elects and operate within certain technical specifications. The various types and transmission characteristics of local channels which are offered for termination at a premises for connection to only customer premises equipment and systems (except as provided in Section 2.1.5) are as set forth following:

1. Type 414B - Furnished for tie line use, between a customer's premises PBX (or similar) switching system and a customer's Centrex arrangement when the switching system is located in a Company central office. E&M signaling is included in the local channel.
2. Type 414C - Furnished for tie line use, between two customers' Centrex arrangements when both switching systems are located in a Company central office.
3. Type 415 - Furnished for voice transmission in the same serving office as the primary service, off-premises extension (non-PBX) and off-premises Centrex (with switching equipment located on Company premises) station and/or extension station use. Also for telephone answering service use. In addition, Type 415 meets the following technical specifications:

A two-wire interface with effective two-wire facilities engineered for 1000 Hz net loss of 6dB, loop signaling is included in the local channel.

4. Type 417 - Furnished for voice transmission for telephone answering service for service between the concentrator located in the Company central office and the customer premises identifier (417A). Also furnished for service between the electronic concentrator and the traffic director (417B).

(1) Obsolete-applicable to existing service installations at existing locations for existing customers.

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

B. (Continued)

- 5. Type 420 - A four-wire interface with four-wire service components engineered for 1000 Hz net loss of 16dB. Normally suitable for use as a full duplex data channel. (2)
 - 6. Type 422 - A two-wire interface with effective two-wire service components engineered for a 1000 Hz net loss of 16dB. Normally suitable for use as a half duplex data channel.(2)
 - 7. Type 423 - A two-wire interface with effective two-wire service components engineered for a 1000 Hz net loss of up to 10dB for two-point service and up to 20dB for multipoint service. Furnished for two-point or multipoint voice transmission, Private Line voice or intercommunication line or supervisory control use. Limited to five (5) local channels on multipoint service where two-way communication is required. (2)
 - 8. Type 424 - A two-wire or four-wire interface with effective four-wire service components engineered to VLN design specifications for tie line use. Normally suitable for use as a tie line between two premises PBX (or similar) switching systems.
 - 9. Type 425 - A four-wire interface with four wire service components engineered for a 1000 Hz net loss of 16dB. Normally suitable for use as a voice channel.
 - 10. Type 428 - A two-wire interface with effective two-wire service components engineered for a 1000 Hz net loss of VLBN +4dB. Normally suitable for use to provide an off-premises main or extension station of a premises PBX (or similar) switching system.
- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
- (2) Type 420 through Type 423 local channels are not suitable for, nor can they be used for, switching and/or tandem operations to the switched network or other private line services.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

B. (Continued)

11. Type 432 - Furnished for half duplex data transmission for an Automatic Identified Outward Dialing (AIOD) data channel. For use between a premises PBX (or similar) switching system and a serving office.

12. Type 435 - A two-wire interface with four-wire service components engineered for a 1000 Hz net loss of 16dB. Normally suitable for use as a multipoint voice channel where more than five (5) local channels are involved and two-way communication is required.

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

B. (Continued)

Signaling options required to arrange Series 400 channels for suitable signaling are available at charges specified in Section 2.2.6, following. The application of signaling options currently provided to arrange Series 400 on premises, same building and additional point of termination services has been obsoleted to existing installations at existing locations for existing customers.

Bridging charges, per channel bridged, apply when three or more voice grade channels are connected at the same location.

Customers must insure that neither direct transmitted signal nor reflected signal energy is allowed to violate interconnection protection criteria and regulations as set forth in Section 1.

Specifications of net loss (or gain) refer to the requirement of the total channel offering, not the individual local channel. Gains or losses present in customer premises equipment have not been included.

C. Parameters and Specifications

Parameters and specifications for two-point service used with customer premises equipment and station equipment are as follows: Speech application specifications and limits apply to all local channels except Types 420 and 422. Data application specifications and limits apply only to Types 420 and 422.

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

2.2 Description of Services (Continued)

2.2.3 Voice Grade Service-Series 300(1) and 400 (Continued)

C. Parameters and Specifications (Continued)

BASIC PARAMETERS

SPECIFICATIONS OR LIMITS

Net Loss

Local channels used with customer-provided station equipment. Limit as specified in Standard Bell System Design Practices and/or Technical References. The specifications of net loss or gain refer to the requirements of the total channel service offering, not the individual local or interoffice channel. Losses or gains present in Customer Provided Equipment have not been included.

DC Resistance

Local channels used with customer-provided station equipment. Limit as specified in Standard Bell System Design Practices and/or Technical References does not imply or guarantee end-to-end DC continuity.

Frequency Error

± 5 Hz

Frequency Response

300-3000 Hz, -3dB to +12dB
500-2500 Hz, -2dB to + 8dB
("+ " means more loss and "- " means less loss)

Envelope Delay Distortion

For Speech Application, not controlled.

For Data Application, not less than 1000 microseconds, 1000-2400 Hz; less than 1750 microseconds, 800-2600 Hz.

(1) Obsolete-applicable to existing service installations at existing locations for existing customers.

D. Multipoint

The Company will provide bridging equipment in serving offices and primary serving offices to provide multipoint service. Bridging charges apply per channel (interoffice channel, local channel and interexchange channel) in offices where three or more channels are bridged. Bridging charges do not apply to Types 312(1), 415, 417 and 428. See Section 2.2.3, E.8. for intraLATA interexchange bridging charges.

Standard bridging equipment for two-way communication between all points will be provided unless the customer specifies another fixed bridging arrangement.

The transmission parameters specified in Section 2.2.3, C., preceding, are not applicable to multipoint service consisting of more than five points where local channels with two-wire service components and two-way communication are involved or more than 20 points otherwise.

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

F. Conditioning Options -Available for Types 414B, 414C, 420 and 422

The types and descriptions of the available conditioning options at rates and charges specified in 2.2.7, following, are as follows:

1. Type C - Conditioning provides assured transmission quality for frequency response and envelope delay distortion as specified below.

- a. Type C1⁽²⁾ - for a two-point or multi-point channel:

The envelope delay distortion shall not exceed:
Between 1000 and 2400 Hz, a maximum difference of 1000 microseconds.

The loss deviation with frequency (from 1000 Hz, reference) shall not exceed:

Between 1000 and 2400 Hz, -1dB to +3dB.
Between 300 and 2700 Hz, -2dB to +6dB.
(+ means more loss)

⁽¹⁾ Obsolete-applicable to existing service installations at existing locations for existing customers.

⁽²⁾ Type C1 and C2 Channel Conditioning Service will be provided subject to these restrictions: with customer premises equipment, the conditioned channel is restricted to no more than five (5) points and/or 4000 miles on "two wire" service and no more than twenty (20) points and/or 4000 miles on "four-wire" circuits. These restrictions do not apply to one-way simultaneous transmission from a master service point to all other service points such as broadcast-type multi-point service.

The types and descriptions of the available conditioning options at rates and charges specified in 2.2.7, following, are as follows:

1. Type C - Conditioning provides assured transmission quality for frequency response and envelope delay distortion as specified below.

a. Type C1(2) - for a two-point or multi-point channel:

The envelope delay distortion shall not exceed:
Between 1000 and 2400 Hz, a maximum difference of 1000 microseconds.

The loss deviation with frequency (from 1000 Hz, reference) shall not exceed:

Between 1000 and 2400 Hz, -1dB to +3dB.
Between 300 and 2700 Hz, -2dB to +6dB.
(+ means more loss)

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
- (2) Type C1 and C2 Channel Conditioning Service will be provided subject to these restrictions: with customer premises equipment, the conditioned channel is restricted to no more than five (5) points and/or 4000 miles on "two wire" service and no more than twenty (20) points and/or 4000 miles on "four-wire" circuits. These restrictions do not apply to one-way simultaneous transmission from a master service point to all other service points such as broadcast-type multi-point service.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.5 Extension Service

In addition to the general regulations and definitions applicable to Private Line Service set forth in Sections 2 and 3 of this Tariff, the following regulations apply to Extension Service.

A. Voice Grade Service 300(1) and 400 Series Channels)

Extension service is that of furnishing service components for one or more service points for each authorized connection to a private line voice grade service equipped for communication among three or more service points at a time, and furnished to a branch or agency of the United States Government for the collection and dissemination of information relating to air traffic control activities and similar information of public interest in connection with supervision of the flight of aircraft along civil airways.

B. Sub-Voice Grade Service (200 Series Channels)

1. Extension service is that of furnishing service components to allow connection with a private line sub-voice grade service furnished to a branch or agency of the United States Government for the collection and dissemination of weather information or miscellaneous airways information pertaining to the supervision of flight of aircraft along civil airways.

2. Connection may be made as follows:

a. Receiving Only Service - for reception of weather and miscellaneous airways information transmitted over the Government service to which it is connected.

b. Sending and Receiving Service - for transmission of flight plans to and acknowledge of such plans from the Government service to which the connection is authorized.

(1) Obsolete-applicable to existing service installations at existing locations for existing customers.

PRIVATE LINE SERVICE

2.2 Description of Services (Continued)

2.2.6 Signaling

A. Rules and Regulations

1. The Type A, B and C Loop Signaling Arrangement for station ports of a premises PBX (or similar) switching system and the E&M Signaling Arrangement for tie-lines are furnished for grandfathered and registered PBX's in accordance with Part 68 of the Federal Communications Commissions's Rules and Regulations.
2. For connections to registered PBX (or similar) equipment, customer must specify the equipment capability of their registered equipment.
3. Customers with grandfathered customer-provided PBX (or similar) equipment may, at their option:
 - a. Continue to provide their own off-premises station signaling capability and utilize only the type 428 channel.
 - b. Request that off-premises station capability be provided by the Company. Where this option is selected, the customer must specify his/her equipment signaling capability.
4. Based on information provided by the customer, the Company will furnish the appropriate signaling arrangement. Where the requested signaling arrangement is furnished and determined to be of a lesser signaling range than required, and the customer requests the Company to furnish another signaling arrangement, such request will be treated as a new request for service and appropriate non-recurring charges will apply.

PRIVATE LINE SERVICE

3.1 Foreign Exchange Service (Business Only) (C)

3.1.1 Scope

- A. This Section sets forth regulations and related charges for Foreign Exchange (FX) Service furnished by the Company. (These are in addition to other applicable rules, regulations and charges as set forth in other sections of this Tariff.) The regulations of the connecting company apply to the portion of the FX Service which it furnishes at "other line" charges.
- B. FX Service is defined as the furnishing of facilities for telecommunications between two or more designated points, furnished by means of a circuit connecting a customer's service point to a primary serving office of another exchange, all of which are within the same Local Access and Transport Area (LATA). This service is provided based upon the availability of necessary facilities.
- C. The Company does not undertake to transmit messages, but offers the use of its service components, where available, to customers for such purposes.

3.1.2 Limitations

- A. FX Service is provided only by means of facilities which are not needed by the Company in the furnishing of both Local Exchange Service and Message Telecommunications Service. The use and restoration of FX service shall be in accordance with Part 64, Subpart D, Appendix A of the Federal Communications Commission's Rules and Regulations, which specifies the priority system for users of such services.
- B. Subject to compliance with rules and regulations of Sections 1 and 2 preceding and 3.1.2 A., the Company may refuse to furnish new or additional FX service and may suspend, in whole or in part, the furnishing of existing service whenever such facilities are needed in the furnishing of Local Exchange Service and Message Telecommunications Service. No liability whatsoever shall attach to the Company in such cases where the Company refuses to furnish new or additional FX service. The only liability of the Company shall be an abatement of the charge for such service for the period of interruption.
- C. FX service will be limited to **individual** line service, Key System trunks, or PBX/PABX trunks, when facilities and equipment for its provision are available. (C)

PRIVATE LINE SERVICE

3.1 Foreign Exchange Service

3.1.1 Scope

- A. This Section sets forth regulations and related charges for Foreign Exchange (FX) Service furnished by the Company. (These are in addition to other applicable rules, regulations and charges as set forth in other sections of this Tariff.) The regulations of the connecting company apply to the portion of the FX Service which it furnishes at "other line" charges.
- B. FX Service is defined as the furnishing of facilities for telecommunications between two or more designated points, furnished by means of a circuit connecting a customer's service point to a primary serving office of another exchange, all of which are within the same Local Access and Transport Area (LATA). This service is provided based upon the availability of necessary facilities.
- C. The Company does not undertake to transmit messages, but offers the use of its service components, where available, to customers for such purposes.

3.1.2 Limitations

- A. FX Service is provided only by means of facilities which are not needed by the Company in the furnishing of both Local Exchange Service and Message Telecommunications Service. The use and restoration of FX service shall be in accordance with Part 64, Subpart D, Appendix A of the Federal Communications Commission's Rules and Regulations, which specifies the priority system for users of such services.
- B. Subject to compliance with rules and regulations of Sections 1 and 2 preceding and 3.1.2 A., the Company may refuse to furnish new or additional FX service and may suspend, in whole or in part, the furnishing of existing service whenever such facilities are needed in the furnishing of Local Exchange Service and Message Telecommunications Service. No liability whatsoever shall attach to the Company in such cases where the Company refuses to furnish new or additional FX service. The only liability of the Company shall be an abatement of the charge for such service for the period of interruption.
- C. FX service will be limited to business and residence individual line service, Key System trunks, or PBX/PABX trunks, when facilities and equipment for its provision are available.

PRIVATE LINE SERVICE

3.1 Foreign Exchange Service (Business Only) (Continued) (C)

3.1.3 Description of Service

- A. This service is furnished to a maximum of two exchanges (in addition to the exchange in which the Local Exchange Service is furnished). Service connection is provided from one exchange only. The Company will only provide this service when both service points (the open end and the closed end) are within the same LATA.
- B. Service is furnished on the condition that additional costs to the Company may be necessary to provide a type of signaling suitable for operation with the exchange from which service is furnished, or to provide, at the customer's request, a type of signaling other than the Company would elect to furnish. In such cases, additional charges shall apply.
- C. Off-premises extensions are provided only where service components and conditions permit. Local Channel Type 415 from Section 2 of this tariff will apply for off-premises extensions.
- D. Customers, for the local exchange portions of the service, are subject to the Local Exchange Service charges, rules and regulations; and for the FX portion of the service, are subject to FX charges, rules and regulations in this Tariff.

Customers to FX service are required to take service of the local exchange from which service would normally be rendered.

- E. Calls beyond the local calling area of the serving exchange, the exchange from which the foreign dial tone is provided, will not be permitted. Local calling area is considered to be the main stations served by the serving exchange, plus any extended area service which may be provided from the serving company.

STATEMENT OF MAXIMUM ALLOWABLE RATES

Presented in this section are the Maximum Allowable Rates that Sprint Missouri, Inc. may charge for its services for the 12 month period beginning December 18, 2003 and ending December 17, 2004, pursuant to Section 392.245 RSMo. Under Section 392.245 RSMo the maximum allowable rates for basic services are adjusted annually by the change in the Telephone Services component of the Consumer Price Index. The maximum allowable rates for non-basic services are adjusted annually by 8%. The actual rates for Sprint's services are found in the applicable sections of this tariff as referenced below.

(C)

Service	Service Classification	Tariff Reference	Maximum Allowable Rate	
			Monthly	NRC
1. IntraLATA Interexchange Type 102

PRIVATE LINE SERVICE

REC'D OCT 22 2002

5.1 LightLink® Service

Service Commission

5.1.1 General

- A. LightLink® Service is furnished for Private Line IntraLATA Intraexchange and Interexchange communications by the Telephone Company and is a dedicated, non-switched service.
- B. LightLink® Service is a service for the transmission of digital signals and uses digital transmission facilities.
- C. LightLink® Service provides for the simultaneous two-way transmission of isochronous digital signals at speeds of 44.736 Mbps (DS3), where facilities exist.
- D. To ensure satisfactory operation, the terminal equipment provided by the customer must be compatible with the LightLink® Service channel facility provided by the Telephone Company.
- E. Unless specified following, the regulations for LightLink® Service specified herein apply in addition to the regulations set forth in other sections of this tariff.
- F. The rates specified for LightLink® Service in 5.1.7 following contemplate the provision of a digital quality facility utilizing existing interoffice carrier equipment and/or exchange cable facilities compatible with this service. If equipment, new facilities or changes to existing facilities are required for the provision of this service, then charges as specified in Section 8 of the P.S.C. MO No. 22 General Exchange Tariff, Construction and Installation Charges, will apply in addition to the rates for LightLink® Service.
- G. Temporary Suspension of Service (Vacation Service) at the customer's request, as defined in Section 24 of the P.S.C. MO No. 22 General Exchange Tariff, is not allowed.

5.1.2 Regulations

A. Description of Service

- 1. LightLink® Service provides a high capacity channel for the transmission of 44.736 Mbps isochronous serial data having a line code of bipolar three zero substitution (B3ZS). LightLink® Service is provided between two points located within a LATA. LightLink® Service is available utilizing an electrical interface. The interface will have the characteristics of its respective signal at the point of demarcation. The required format and interface specifications are contained in Technical Reference Publications GR-54 and GR-342.
- 2. Multipoint service is not available with LightLink® Service.

5.1 LightLink® Service (Cont'd)

REC'D OCT 22 2002

5.1.2 Regulations (Cont'd)

A. Description of Service (Cont'd)

Service Commission

3. A Channel Service Unit (CSU) or appropriate termination equipment provided by the customer is required at a customer's or authorized user's premises to perform such functions as:

- proper termination of the service
- amplification
- signal shaping
- remote loop-back

4. The design, maintenance and operation of LightLink® Service contemplates communications originating and terminating as (1) a customer premises to customer premises channel via the Telephone Company's Serving Wire Center and/or through remote Serving Wire Centers; (2) a customer premises to the Serving Wire Center and/or remote Serving Wire Centers - partial channel (link); or (3) a central office to central office (interoffice) partial channel (link).

5.1 LightLink® Service (Cont'd)

REC'D OCT 22 2002

5.1.2 Regulations (Cont'd)

Service Commission

B. Definitions

1. Channel Mileage - Channel Mileage provides for the end office equipment and the transmission channel between the Serving Wire Centers associated with two customer designated premises. Channel Mileage is comprised of Channel Mileage Facility (per mile) and Channel Mileage Termination (fixed) rates.
 - (a) Channel Mileage Facility (Per Mile) - The Channel Mileage Facility (per mile) recovers the cost for the transmission path that extends between the Telephone Company Serving Wire Centers and includes primarily outside plant used to provide the facility.
 - (b) Channel Mileage Termination (Fixed) - Channel Mileage Termination (fixed) recovers the cost for end office equipment associated with terminating the facility (i.e., basic circuit equipment and terminations at Serving Wire Centers).
2. Channel Service Unit (CSU) - The term "Channel Service Unit (CSU)" denotes equipment provided by the customer to terminate a digital facility on the customer's premises.
3. Channel Termination - The local facility from the customer's designated premises to the Serving Wire Center.
4. DS3 - This denotes a channel service expressed in terms of its digitally encoded data bit rate in accordance with the North American hierarchy of digital signal levels. It has a 44.736 Mbps transmission data rate, and provides for the two-way simultaneous transmission of randomized Non-Return-to-Zero (NRZ) signals with B3ZS format.

2. Responsibility of the Telephone Company

- (a) The responsibility of the Telephone Company shall be limited to the furnishing and maintenance of LightLink® Service to a network interface on the customer's premises where provision is made for the connection of local service.
- (b) The Telephone Company shall not be responsible for installation, operation or maintenance of any terminal equipment or communications systems provided by the customer. LightLink® Service is not represented as adapted for the use of such equipment or system. Where such equipment or system is connected to Telephone Company facilities, the responsibility of the Telephone Company shall be limited to the furnishing of facilities suitable for LightLink® Service and to the maintenance and operation in a manner proper for such digital service. The Telephone Company shall not be responsible for:
 - The through transmission of signals generated by such equipment or system, or for the quality of, or defects in, such transmission, or
 - The reception of signals by such equipment or systems, or
 - Damage to terminal equipment or communications systems provided by a customer or authorized user due to testing.
- (c) The Telephone Company shall not be responsible to the customer if changes in any of the facilities, operations or procedures of the Telephone Company utilized in the provision of LightLink® Service render any facilities or equipment provided by a customer obsolete, or require modification or alteration of such equipment or system or otherwise affects its use or performance.

2. Responsibility of the Telephone Company (Cont'd)

(d) The Telephone Company is responsible for maintaining and repairing the facilities it furnishes. The customer may not rearrange, disconnect, remove or attempt to repair any equipment installed by the Telephone Company without prior written consent of the Telephone Company.

(e) LightLink® Service is designed to meet or exceed a performance objective of 99% error-free seconds of transmission per 1000 seconds on a daily basis and 99.9% availability on an annual basis when measured through the digital termination equipment.

(f) In order to maintain the quality of LightLink® Service, the Telephone Company reserves the right to perform preventative maintenance and software updates to the network. The Telephone Company has classified maintenance as follows:

(1) Scheduled Maintenance

Scheduled maintenance is performed for functions such as hardware and software upgrades and network optimization. The Telephone Company will perform these tasks in a maintenance window that is anticipated to minimize disruption of customer service and activity. The Telephone Company will provide advance notice of all scheduled maintenance.

(2) Demand Maintenance

Demand maintenance may occur as a result of unexpected events and is performed when LightLink® Service network elements are in jeopardy. The Telephone Company will perform this type of maintenance at its discretion. Due to the nature of demand maintenance, prior notification may not be possible; however, the customer will be informed when the maintenance has been completed.

3. Responsibility of the Customer

(a) The customer is responsible for installing and testing the customer premises equipment or facilities to insure that when they are connected to LightLink® Service such equipment or facilities are operating properly.

C. Connections (Cont'd)

3. Responsibility of the Customer (Cont'd)

(b) The operating characteristics of the customer premises equipment or facilities shall be such as to not interfere with any of the services offered by the Telephone Company. Such use is subject to the further provisions that the equipment provided by a customer does not: endanger the safety of Telephone Company employees or the public; damage, require change in or alteration of the equipment or other facilities of the Telephone Company; interfere with the proper functioning of such equipment or facilities; impair the operation of the Telephone Company's facilities or otherwise injure the public in its use of the Telephone Company's services. Upon notice that the equipment provided by a customer is causing or is likely to cause such hazard or interference, the customer shall take such steps as shall be necessary to remove or prevent such hazard or interference.

(c) The customer's responsibility shall include cooperative testing with the Telephone Company as may be necessary. Where regeneration and/or equalization adjustments or changes may be required to compensate for rearrangements and/or changes in outside plant facilities, the customer will be responsible for all expenses incurred in changes to his customer premises equipment.

4. Connection of Customer-Provided Terminal Equipment, Customer-Provided Derivation Equipment and Customer-Provided Communications Systems

(a) The following provisions will apply:

(1) Customer-Provided Terminal Equipment and/or Customer-Provided Communications Systems may be connected at the premises of the customer to LightLink® Service.

(2) The customers, by use of their own derivation equipment, may create digital bit streams from LightLink® Service and such equipment may be connected for transmission of such bit streams when connected through a customer-provided CSU.

(3) The undertaking of the Telephone Company is to furnish LightLink® Service as ordered and specified by the customer except as specified in (d) following.

5.1 LightLink® Service (Cont'd)

REC'D OCT 22 2002

5.1.2 Regulations (Cont'd)

Service Commission

C. Connections (Cont'd)

4. Connection of Customer-Provided ... (Cont'd)

- (f) The customer may not rearrange, disconnect, remove or attempt to repair any equipment installed by the Telephone Company without the prior written consent of the Telephone Company.
- (g) For maintenance purposes, upon request of the Telephone Company, the customer will be responsible for notifying the Telephone Company of the type of digital terminating equipment used.

5.1.3 Term Discount Plan (TDP)

- A. A Term Discount Plan (TDP) provides the customer with discounted rates for LightLink® Service. The minimum service period is twelve (12) months. LightLink® Service may be ordered under a TDP for fixed periods of 12 - 23 months, 24 - 35 months, 36 - 59 months, and 60 - 84 months. Month-to-month rates in this tariff may apply only after the expiration of a TDP. All rate elements within the same LightLink® Service facility must be ordered under the same commitment period and under the same service date. The customer must order the TDP in writing to the Telephone Company. A TDP may be ordered in one-month increments, (e.g. a 28-month commitment period or a 37-month commitment period).
- B. The customer must specify the length of the initial service period at the time the service is ordered. When a customer converts to a TDP, Nonrecurring Charges do not apply toward facilities in-service at that time. If a customer converts from month-to-month rates to a TDP or upgrades from one TDP to another, Nonrecurring Charges and Service Connection Charges do not apply.
- C. At the end of the TDP the customer may subscribe to a new TDP at the prevailing rates set forth in 5.1.7. following. If the customer does not select a new TDP, the rates will convert to the prevailing month-to-month rates.

5.1.3 Term Discount Plan (TDP) (Cont'd)

- D. Rate increases or decreases will automatically be applied to the monthly term plan rates for the remaining term of the TDP. If Telephone Company initiated rate increases to any rate element or combination of rate elements causes the charges for the entire LightLink® Service under the TDP to increase by 10% or more annually, then the customer may cancel the TDP without incurring termination liability charges provided the customer notifies the Telephone Company within 30 days after the effective date of the rate increase.
- E. The customer can extend TDP commitment periods at any time during the term of the plan, up to a maximum of 84 months. The number of remaining months in the original term plan will become part of the total term in the new term plan.

5.1 LightLink® Service (Cont'd)

Service Commission

5.1.4 Termination Liability Charges

- A. If a customer under a Term Discount Plan (TDP) disconnects all or a portion of LightLink® Service prior to the expiration of the TDP, then a Termination Liability Charge will apply to those services that are disconnected. The Termination Liability Charge will be a one-time charge equal to sum of 50% of the payments remaining for the rest of the TDP.
- B. Customers may move Channel Terminations and not be subject to Termination Liability Charges providing the terms of the TDP are maintained. If charges as specified in 5.1.1.F. were applied to the service being terminated or moved, any termination or move charges associated with that construction apply, as well as any construction charges at the new location.
- C. Termination Liability Charges will not apply when a service or rate element under a TDP is disconnected prior to the expiration of a selected service period as a result of a change in tariff jurisdiction and/or a customer requested upgrade to a next generation service offering, under the following conditions:
 - 1. The service period of the new TDP for the new service offering is a period equal to or exceeding the remaining service period of the disconnected TDP, and
 - 2. The service orders to install the new service and disconnect the old service are related together, and there is no lapse in service between the installation of the new service and the disconnection of the old service, and
 - 3. The service orders to install the new service and disconnect the old service are for the same customer at the same location.
- D. The Telephone Company will determine whether the replacement service qualifies as a next generation service offering.
- E. Nonrecurring charges and Service Connection Charges for the new service will apply according to the requirements of the new service.

PRIVATE LINE SERVICE

REC'D OCT 22 2002

5.1 LightLink® Service (Cont'd)

Service Commission

5.1.5 Rate Categories

There are three rate categories which apply to LightLink® Service:

- Channel Termination
- Channel Mileage
- Optional Features and Functions

A. Channel Termination

The Channel Termination rate category provides for the communications path between a customer designated premises and the Serving Wire Center. Included as part of the Channel Termination is a standard channel interface arrangement which defines the technical characteristics associated with the type of facilities to which the service is to be connected at the point of termination (POT) and the type of signaling capability if any. The signaling capability itself is provided as a part of this rate category. One Channel Termination charge applies per customer designated premises at which the channel is terminated. The charges applicable to the Channel Termination vary based on distance, as set forth in 5.1.7.A. following.

B. Channel Mileage

The Channel Mileage rate category provides for the end office equipment and the transmission channel between the Serving Wire Centers associated with two customer designated premises. Channel Mileage rates are made up of the Channel Mileage Facility (per mile) rate and the Channel Mileage Termination (fixed) rate. Channel Mileage charges are set forth in 5.1.7.B.

(1) Channel Mileage Facility (Per Mile)

The Channel Mileage Facility (per mile) rate recovers the cost for the transmission path, which extends between the Telephone Company Serving Wire Centers and includes primarily outside plant used to provide the facility.

(2) Channel Mileage Termination (Fixed)

The Channel Mileage Termination (fixed) rate recovers the cost for end office equipment associated with terminating the facility (i.e., basic circuit equipment and terminations at Serving Wire Centers). The Telephone Company applies a 50% billing percentage to the channel mileage fixed rate on jointly owned circuits, and applies 100% on wholly owned circuits. When the Channel Mileage Facility (per mile) is zero (i.e., collocated Serving Wire Centers), neither the Channel Mileage Facility (per mile) rate nor the Channel Mileage Termination (fixed) rate will apply.

Service Commission

5.1.5 Rate Categories (Cont'd)

3. Optional Features and Functions

Optional Features and Functions may be added to improve the quality or utility to meet the customer's specific communications requirements. These are not necessarily identifiable with specific equipment, but rather represent the end result in terms of performance characteristics, which may be obtained. These characteristics may be obtained by using various combinations of equipment. Optional Features and Functions that are available include the following:

(1) Central Office Multiplexing

DS3 to DS1 - An arrangement that converts a 44.736 Mbps channel to 28 DS1 channels using digital time division multiplexing. Central Office Multiplexing is not available at the customer's premises.

(2) Clear Channel Capability (CCC)

Clear Channel Capability (CCC) is an arrangement that alters a DS1/1.544 Mbps signal with unconstrained information bits to meet pulse density requirements outlined in Technical Reference Publications GR-54 and GR-342. This will allow a customer to transport an all zero octet over a DS1/1.544 Mbps channel providing an available combined maximum 1.536 Mbps data rate. This arrangement requires the customer signal at the channel interface to conform to Bipolar with 8 Zero Substitution (B8ZS) line code as described in Technical Reference Publications GR-54 and GR-342.

CCC is provided on DS1/1.544 Mbps channels of a LightLink® Service facility between two customer designated premises and is subject to the availability of facilities. This optional feature may be ordered at the same time the LightLink® Service channel is ordered, or it may be ordered as an additional feature of an existing LightLink® Service channel.

(3) Multiplexed Service Connection

A Multiplexed Service Connection is an arrangement that allows one DS1 channel of a multiplexed Telephone Company service to be connected to one DS1 channel with like signaling of another Telephone Company service. For example, the lesser speed may be an ISDN-PRI DS1 channel connected between a multiplexed DS3 service. A Multiplexed Service Connection will be provided at all Telephone Company locations where Central Office Multiplexing is performed.

PRIVATE LINE SERVICE

REC'D OCT 22 2002

5.1 LightLink® Service (Cont'd)

Service Commission

5.1.6 Application Of Rates

- A. Each LightLink® Service facility may be comprised of one or two Channel Terminations. Where both customer premises are served by the same Serving Wire Center, the service will consist of two Channel Terminations. Where each customer premises is served by different Serving Wire Centers, the service will consist of two Channel Terminations, one Channel Mileage Termination (fixed) and the Channel Mileage Facility (per mile) between Serving Wire Centers. Where one customer premises is involved, the Channel Termination of a lower bandwidth service can be replaced with a LightLink® Service Channel Termination. For example, the Channel Termination associated with ISDN-PRI Service, referred to as an ISDN-PRI Primary Rate Access Line, can be replaced with a LightLink® Service Channel Termination to connect the ISDN-PRI Service to the Serving Wire Center of the customer's designated premises.
- B. The Channel Termination rate element for LightLink® Service will vary based on distance. The mileage used to determine the monthly rate for Channel Terminations located outside a Telephone Company central office is the airline distance between the customer's designated premises and the Telephone Company's Serving Wire Center. The mileage measurement is determined by utilizing exchange maps and mileage tables located in designated Telephone Company offices for such purposes.
- C. Intraexchange channels furnished between Telephone Company central offices will be charged at rates based on airline distance between the central offices. Interexchange channels will be charged at rates based on airline distance between Telephone Company central offices. Fractional mileage will be rounded up to the next full mile.
- D. Whenever facilities are provided jointly by the Telephone Company and another telephone company, the regulations, rates and charges of the other telephone company shall apply for the equipment and facilities furnished by the other telephone company for use in connection with LightLink® Service. The Telephone Company applies a 50% billing percentage to the Channel Mileage Termination (fixed) rate on jointly owned circuits, and applies 100% on wholly owned circuits. When the Channel Mileage Facility (per mile) is zero (i.e., collocated Serving Wire Centers), neither the Channel Mileage Facility (per mile) rate nor the Channel Mileage Termination (fixed) rate will apply.
