B. Number 5 Fire Reporting System

1. Operation

- a. Individuals reporting fire emergencies dial a listed connector telephone number to activate the system located in the central office. The fire system causes all interconnected firemen's one-party line telephones to ring with a continuous distinctive ringing tone, except those lines which are busy. On busy firemen's lines, a special tone is applied informing such persons of the incoming fire call. When the busy fireman's line is made free, the system begins ringing such stations with continuous ring tone also.
- b. The calling party reports the emergency situation to the first fireman to answer the fire call and then disconnects. Even after a fireman, or firemen, have answered the fire call, the equipment will continue to ring the unanswered firemen's stations with continuous ringing tone until the completion of the equipment timing cycle. During this cycle, normally from six to eight minutes, the firemen are allowed to discuss the situation on an interconnected common talking circuit established by the fire equipment.
- c. Where desired, optional equipment permits any fireman to sound the fire siren by depressing a button at his special telephone instrument. The siren, or other signal, cannot be sounded until after the fire alarm system has been activated by the dialing of the listed fire number.
- d. The maximum capacity of the fire system is twenty (20) interconnected firemen's one-party station lines.

2. Rates and Charges

- a. The monthly rates below are in addition to all applicable monthly charges for exchange services or facilities provided to city fire departments, fire associations, volunteer fire departments, etc., and/or services provided to individual firemen interconnected with such equipment. Rates for exchange services or facilities are specified in this Tariff.
