REC'D MAR 29 1999

1.1. Tariff Format

1.1.1. **Page Numbering** - Page numbers appear in the upper right hand corner of each page. Pages are numbered sequentially, when a new page is added between pages it will be numbered with an additional number preceded by a ".". A page inserted between pages 10 and 11 would be page 10.1.

1.1.2. **Revision Numbers** - Revision numbers also appear in the upper right corner of the page. These numbers are used to determine the most current page version on file. For example, the 4th revised page 34 cancels the 3rd revised page 34. Because of deferrals, notice periods, etc., the most current page revision number on file is not always the tariff page in effect. Consult check sheets and supplements for the page currently in effect.

1.1.3. **Numbering Sequence** - There are nine levels of alpha-numeric numbering. Each level is subservient to its next higher level. The following is an example of the numbering sequence used in this tariff. Alpha-numeric coding is used for paragraph identification. Each level is subservient to the previous higher number/letter. Following is the sequence used in this tariff.

The amount of charge that is prorated to each Customer's bill is determined by the interstate telecommunications services provided to and billed to a Customer service location in such a taxing jurisdiction with the aggregate of such charges equal to the amount of the tax or fee imposed upon or passed on to the Company.
