**TARIFF FORMAT**

- (A) **Sheet Numbering** - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- (B) **Sheet Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Consult the Check Sheet for the sheet currently in effect.
- (C) **Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2
  - 2.1
  - 2.1.1
  - 2.1.1(A)
  - 2.1.1(A)(1)
  - 2.1.1(A)(1)(a)
  - 2.1.1(A)(1)(a)(I)
  - 2.1.1(A)(1)(a)(I)(i)
  - 2.1.1(A)(1)(a)(I)(i)(1)
- (D) **Check Sheets** - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new sheets are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some sheets.)

- 2.11.7** In the event of Customer use of equipment in such a manner as to adversely affect the Company's service to others. Such discontinuance of service may be made without notice if a dangerous condition relating to Company service exists which could subject any person to imminent harm or result in substantial damage to the property of the Company or others. In such case, the Company shall notify the Customer immediately in writing and, if possible, orally of the reasons for the termination or refusal.
- 2.11.8** In the event of unauthorized or fraudulent use of service. The Company may terminate service without notice to the Customer if it has evidence that such Customer has obtained unauthorized service by illegal use or theft. The Company shall within twenty four (24) hours after such termination send written notification to the Customer of the reasons for such termination. Whenever service is discontinued for fraudulent use of service, the Company may, before restoring service, require the Customer to make, at his own expense, all changes in facilities or equipment necessary to eliminate illegal use and to pay an amount reasonably estimated as the loss in revenues resulting from such fraudulent use.
- 2.11.9** For failure of the Customer to make proper application for service. A Customer who has complied with Commission regulations shall not be denied service for failure to comply with the Company's rules which have not been made effective in the manner prescribed by the Commission.
- 2.11.10** For Customer's breach of the contract for service between the Company and the Customer.
- 2.11.11** When necessary for the Company to comply with any order or request of any governmental authority having jurisdiction.
- 2.11.12** The Company reserves the right to discontinue furnishing service or to limit the use of service when necessary due to conditions beyond its control or when the Customer is using service in violation of the law or provisions of this tariff.

**SECTION 3 - DATA SERVICES****3.1 Calculation of Distance**

For mileage sensitive services, the distance between originating and terminating points of a private line facility are determined using vertical ("V") and horizontal ("H") coordinates for the serving wire center(s) or BellSouth Long Distance access point(s) associated with the facility. For purposes of determining the airline mileage of a call the Company references the V and H coordinates as found in Telcordia's V&H Tape and NECA FCC Tariff No. 4. The use of coordinates for wire centers versus access points and the method for calculating actual distances varies based on the type of service and the form of access used to reach the BellSouth Long Distance network.

For non-switched private line services, mileage measurements are based on the distance in airline miles between BellSouth Long Distance access points associated with each end of the circuit. Distance measurements are determined using the mileage calculation method shown in section 3.1.1

## SECTION 3 - DATA SERVICES, (CONT'D.)

## 3.1 Calculation of Distance, (Cont'd.)

## 3.1.1 Calculation Method for Private Line Services

The following steps describe the procedure for calculating mileage distances for private line services:

- Step 1 Obtain the "V" and "H" coordinates for the Company access points serving the originating and terminating locations.
- Step 2 Obtain the difference between the "V" coordinates. Obtain the Difference between the "H" coordinates. The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.
- Step 3 Square the differences obtained in Step 2.
- Step 4 Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5 Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6 Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the wire centers and/or access points.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

## SECTION 3 – DATA SERVICES, (CONT'D.)

## 3.2 Frame Relay Service, (Cont'd.)

## 3.2.2 Explanation of Terms

## (A) Customer Connection to Frame Relay Service

The Customer Connection (or Port) provides the Customer with the standard interface to the Frame Relay service network. This interface receives the data frame from the Customer's network or device and verifies that the DLCI is valid before relaying the frame to the destination. Included in the Customer Connection are the Customer's termination on the Frame Relay service switching equipment, the transport from the Serving Area Point to the switching equipment, and the first DLCI. These interfaces connect the Frame Relay service network with the digital facilities operating at transmission speeds of 56 Kbps, 64 Kbps, 1.536 Mbps, or 44.210 Mbps.

## (B) Frame Relay Service Network Serving Area

Certain serving wire centers are designated Serving Area Points. A Frame Relay Service Network Serving Area is comprised of all the Serving Area Points in a geographic area.

## (C) Permanent Virtual Circuit (PVC)

A software defined path transporting data within the Frame Relay service network between two Customer Connections. This data path, once defined in the network software, does not have to be established again. PVCs are end-to-end, bi-directional channels that are established via the service provisioning process.

## (D) Data Link Connection Identifier (DLCI)

The Frame Relay standard specifies an address field called the Data Link Connection Identifier. The DLCI specifies a connection. A PVC is created when any two DLCI's are mapped together.

**SECTION 3 - DATA SERVICES, (CONT'D.)**

**3.2 Frame Relay Service, (Cont'd.)**

**3.2.2 Explanation of Terms, (cont'd.)**

**(E) Committed Information Rate (CIR)**

Committed Information Rate is a feature that enables the Customer to select a sustained throughput under normal conditions. A CIR must be selected for each DLCI. Frames submitted at a rate above the subscribed CIR will be marked "discard eligible" (DE) and should network congestion occur, are subject to being dropped by the network. If CIR is set equal to zero, then all frames will be marked DE. However, in the absence of network congestion, DE marked frames will be transported with the same reliability as frames not marked DE within a single, Company Frame Relay Switch. The CIR value selected cannot exceed the minimum transmission speed of the link at either end of the PVC.

**(F) Service Area Point (SAP)**

A Company serving wire center that is designated as a member of the Frame Relay Service Network Serving Area. (See the definition of Frame Relay Service Network Serving Area preceding).

- (B) The maximum number of DLCIs per Customer Connection is subject to the characteristics of the Customer's data traffic. Thus, the number of DLCIs per Customer Connection must be negotiated between the Customer and the Company at the establishment of the Customer Connection and subsequent to the establishment should the traffic characteristics change. A maximum of 250 DLCIs may be established across a single Customer Connection.

## 3.2.5 Provision of Service, (cont'd.)

(C) Should a Customer having locations in more than one Frame Relay Network Serving Area within a LATA, desire to send data traffic between these locations, the Customer can interconnect these locations through the following two options:

(1) **Dedicated Connection:**

The Customer subscribes to additional Customer Connections (or Ports) in each Network Serving Area which are enabled to support inter-serving area connectivity and Packet Service Line Extensions to connect them. These additional rate elements will be used solely to transport this Customer's data traffic between affected Frame Relay Network Serving Areas. Feature Charges apply for CIR's associated with PVCs through each connection.

(2) **Shared Connection:**

The Company may establish facilities between Frame Relay Service switching equipment in different Network Serving Areas in the same LATA and may allow Customers to share bandwidth on these facilities; where these shared facilities are available to Customers, a shared connection is an option. The Customer must establish one or more Inter-Network Service Area Links that extend between Frame Relay switches. Each of these links has an associated CIR. One PVC exists between both Customer premises through each link. All CIR's on this PVC must have the same value. Charges for the Inter-Network Serving Area Link are applied as follows:

- (1) the Inter-Network Serving Area Link Establishment is charged at each end of the link,
- (2) the Inter-Network Serving Area Link CIR is charged at each end of the link.
