1.2 General Regulations - (Continued)

1.2.18 Definitions - (Continued)

MAY 2 1996 (CT)

Initial and Additional Period

The initial period denotes the interval of time allowed at the rate specified for a connection between given service points. The initial period for all classes of service is one minute, except for Operator Station - Sent Paid Coin and Person-to-Person - Sent Paid Coin where the initial period is three (3) minutes.

The additional period denotes the unit of time used for measuring and charging for time in excess of the initial period. The additional period for Operator Station - Sent Paid Coin and Person-to-Person - Sent Paid Coin is three minutes. The additional period for all other calls is one minute.

LATA

Local Access and Transport Area (LATA) denotes a geographic area established for the administration of telecommunications service. It encompasses designated exchanges which are grouped to serve common social, economic and miscellaneous purposes.

LDMTS

Long Distance Message Telecommunications Service provided by AT&T.

Network Control Signaling

The transmission of signals used in the telecommunications system which perform functions such as supervision (control, status, and charging signals), address signaling (e.g., dialing), calling and called number identification, audible tone signals (message progress signals indicating reorder or busy conditions, alerting, coin denominations, coin-collect and coin-return tones) to control the operation of switching machines in the telecommunications system.

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations - (Continued)

1.2.21 Definitions - (Continued)

Consumer Calling Card

Any Calling Card that is not a Commercial Calling Card.

Customer

The person, firm or corporation which orders service and is responsible for the payment of charges and compliance with the regulations of the Company or its authorized agent.

Customer Dialed Calling Card Station

That service where the charges for the message are billed to a Company authorized card. These messages are completed without operator assistance unless it is necessary for an operator to record the card number.

Demarcation Point

The electrical terminus of an access line. It provides a physical interface to the access line in terms of design, installation, and testing.

Exchange Access Arrangement (EAA)

A telephone service component which permits access to and from the customer's premises and the telephone exchange network point. A telephone exchange network point is also known as a serving office.

Initial and Additional Period

The initial period denotes the interval of time allowed at the rate specified for a connection between given service points. The initial period for all classes of service is one minute.

Operator Dialed Surcharge

Applies a surcharge to 1) Operator Station and Personal Long Distance rated calls when the customer elects to dial the appropriate operator code ("0", "00", "10288+0") and requires prompting by the operator system to dial the called station or requests the operator to dial the called station, 2) Calls completed by a company operator when the calling party cannot complete the call due to trouble on telecommunications networks other than AT&T's and chooses to have the operator complete the call, and 3) Calls made on a 0- basis in which a Company operator places a call for a calling party after successful Busy Line Verification and Busy Line Interruption processes have been successfully completed.

The surcharge applies in addition to any applicable service charges. The surcharge does not apply to:

- Calls made on a 0+ basis in which a company operator is used only to record the calling station number where originating number identification (ONI) is not available in the area of the Local Exchange Company serving the station originating the call.
- Calls made on a 0+ basis in which a company operator places a call because Automatic Number Identification (ANI) equipment is not available.
- Calls in which a company operator places a call for a calling party who identifies himself/herself as being handicapped and unable to dial the call because of his/her handicap.
- Calls for which AT&T does not have the technical capability to impose the surcharge such as certain coin sent paid, hotel/motel sent paid and time and charges calls.
- Calling Card calls.
- DIRECTory LINK calls.

Telecommunications Service

UTILITY DIVISION

Message Telecommunications Service is that of furnishing service for telecommunications between service points in different local service areas in accordance with the regulations and system of charges specified in this Tariff.

STATE OF MO.

Two-Point Service

A. Person-to-Person

1. That service where the person originating the message specifies to the Company operator a particular person to be reached, a particular department, or office to be reached through a PBX attendant.
2. When, after the service point, or PBX service point called has been reached and while the connection remains established, the person originating the message requests or agrees to talk to any person other than the person specified, or to any other service point, department or office to be reached through a PBX attendant, the classification of the message remains person-to-person.
3. When the person originating the message wishes arrangements made in advance with a particular party at a service point for the establishment of a connection at a specified time (appointment call), the message is classified as person-to-person.
4. The Company does not undertake in connection with person-to-person service to bring to a service point a called person who cannot be reached at a service point connected to the telecommunications network.

CANCELLED

DEC 31 1992

BY 1st R.S. #10

Service Commission

MISSOURI

B. Station-to-Station

That service where the person originating the message

- dials the telephone number desired, or
- gives to the Company operator the telephone number of the desired service point, PBX or PBX service point which is reached directly rather than through a PBX attendant, or gives only the name and address under which the number of the desired service point, or PBX is listed, and does not specify a particular person to be reached nor a particular service point, department or office to be reached through a PBX attendant.

A. Person-to-Person

1. That service where the person originating the message specifies to the Company operator a particular person to be reached, a particular department, or office to be reached through a PBX attendant.
2. When, after the service point, or PBX service point called has been reached and while the connection remains established, the person originating the message requests or agrees to talk to any person other than the person specified, or to any other service point, department or office to be reached through a PBX attendant, the classification of the message remains person-to-person.
3. When the person originating the message wishes arrangements made in advance with a particular party or service point for the establishment of a connection at a specified time (appointment call), the message is classified as person-to-person.
4. The Company does not undertake in connection with person-to-person service to bring to a service point a called person who cannot be reached at a service point connected to the telecommunications network.

MISSOURI
Public Service Commission

Any assessments, franchise fees, privilege, license, excise, or other similar taxes or fees, whether in a lump sum or at a flat rate, or based on receipts, or based on poles, wire or other utility property units, imposed upon the Company by any governmental authority shall be added pro rata, in so far as practical, to the rates and charges stated in the Company's standard schedules, in amounts which in the aggregate for the Company's customers of any political entity shall be equal to the amount of any such tax upon the Company. The Company shall, so long as any such tax or fee is in effect, add to the bills of the customers in such political entity pro rata on the basis of the revenue derived by the Company from each such customer, an amount sufficient to recover any such tax or fee.

1.2.15 Time and Charges on Messages

Time and charges on Message Telecommunications Service messages may be quoted upon request from the customer. Name association with time and charge details will be provided where service components permit. The Company reserves the right to determine the service component used where there are multiple service components.

1.2.16 Promotional Programs

The Company may, upon Commission approval, offer specific rate incentives during specified promotional periods. The Company will notify the Missouri Public Service Commission by letter prior to the commencement of a promotional program. This letter will specify the terms of the promotion, the specific service offered, and the location and dates of the promotional period.

John W. Hamilton, Director

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

(MT)

1.2.21 Connections

When customer premises equipment is connected to MTS, it must comply with the FCC's Registration Program. If Grandfathered customer premises equipment, test equipment or communications systems are connected, the Minimum Protection Criteria specified in this Tariff must be met.

MTS is not represented as adapted for connection to other services or communications systems. It is designed, operated and maintained to provide satisfactory transmission only between a calling and a called service point(s) equipped with suitable customer premises equipment.

The Company is responsible for the quality of transmission for MTS from demarcation point to demarcation point. The Company is not responsible for the quality of transmission of the customer's side of the demarcation points at a premises.

Responsibilities of the Customer

When customer premises equipment or a communications system is connected to MTS, the customer assumes responsibility for the connection as follows:

Interference and Hazard

The operating characteristics of customer premises equipment or communications systems connected to MTS must not interfere with, or impair, any of the services offered by this Company. In addition, they must not endanger the safety of Company employees or the public, damage or interfere with the proper functioning of Company equipment, or otherwise injure the public in its use of MTS.

The Company will take immediate action to protect its services or interests if this regulation is violated.

Changes to MTS

The Company is not obligated to alter or modify MTS because of additions or changes to customer premises equipment or a communications system provided by the customer or others.

(MT)

Issued: October 25, 2005

Effective: November 24, 2005

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

Testing and Maintenance

If a trouble report occurs on an assembly, the customer must determine whether the fault is in (1) the connected premises equipment or communications system, or (2) MTS. The Company will test and maintain only the services it provides. The testing of MTS will usually be made from a point-of-presence.

Information A Customer Must Provide

Prior to reconnecting grandfathered equipment to MTS, the customer must provide the following information about the equipment to the Company:

- 1.Manufacturers name, model number and type
- 2.Ringer equivalent number and type (if known)
- 3.Type of standard jack (if required)
- 4.Service to which equipment is being connected
- 5.Notarized affidavit for premises wiring
- 6.Description of interface
- 7.Line or pin assignment for a multiline jack

The customer must also notify the Company when the grandfathered equipment is permanently disconnected.

Responsibilities of the Company

In addition to furnishing and maintaining its service components for MTS, the Company will provide technical information pertaining to MTS interface parameters as an aid to the customer in selecting the appropriate interface.

(MT)

Issued: October 25, 2005

Effective: November 24, 2005

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

Changes in Minimum Protection Criteria, Operations, or Procedures

The Company is not responsible to any party if a change in its MTS components, Minimum Protection Criteria, operations, or procedures, which are consistent with the Registration Program, (1) affects any facilities, customer premises equipment or communications systems provided by others in any way, or (2) requires their modification in order to be used with MTS. However, if such changes can be reasonably expected to materially affect the operating or transmission characteristics of the MTS or render any customer premises equipment or communications system incompatible with MTS, the Company will make a reasonable effort to notify the customer in writing of the proposed change. A reasonable interval will be allowed before the change is implemented to enable the customer to maintain compatibility of its customer premises equipment or communications system with MTS.

Connection to Service Provided by a Local Exchange Carrier

MTS may be connected to services provided by a Local Exchange Carrier. The connections are subject to the regulations in this Tariff and the appropriate tariff(s) of the Local Exchange Carrier.

Connection of a Communications System or MTS Equivalent Service

When a communications system or MTS equivalent service is connected to the Company's MTS, the customer must make all arrangements concerning the connected systems or service with its provider. The connection does not constitute a joint undertaking between this Company and the provider of the system or service. The system or service must be operated and maintained so it will work satisfactorily with MTS. Connections to MTS will be made in accordance with the following:

Answer Supervision

When MTS is connected to a communications system which is also connected to switching or terminal equipment, such equipment shall provide the necessary answer supervision so that chargeable time begins upon delivery of the MTS message to the equipment and ends upon termination of the message by the calling party.

(MT)

Issued: October 25, 2005

Effective: November 24, 2005

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

Connection of a Communications System or MTS Equivalent Service - (Continued)

Minimum Protection Criteria

The connection at the MTS demarcation point must be made so that it continually complies with the specified Minimum Protection Criteria.

Communications System Failures

When a communications system fails and the connection to MTS is not through switching equipment, the communications system must be arranged to promptly return the MTS to an idle (on-hook) state. In addition, the customer must promptly notify the Company when the communications system fails.

Use of Satellite Facilities

If a communications system uses satellite facilities (directly or indirectly), and is connected to MTS, there may be two or more satellite links involved in the combined connection. In such cases, the Company will not be responsible for and deterioration in the quality of the through transmission of signals on such a connection. The Company will continue to furnish MTS using the service components that it considers to be appropriate. Credit allowance for impaired transmission resulting from such connection will not be granted.

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

Minimum Protection Criteria

Minimum Protection Criteria have been specified so that Company personnel, equipment, and services will be protected from the harmful effects of signal power overload, hazardous voltages and longitudinal imbalance. Minimum Protection Criteria applies to the direct electrical, acoustic, or inductive connections of customer premises equipment and communications systems to MTS.

All Connections

Customer premises equipment and communications systems which are connected to MTS on a direct electrical basis or an acoustic or inductive basis, must comply with the following:

1. To protect other Company services, it is necessary that the signal, which is applied at the demarcation point, meets the following limits:

Metallic Voltage

(A) 4 kHz to 270 kHz

Center Frequency (f) of 8 kHz Band	Max. Voltage in All 8 kHz Bands	Metallic Terminating Impedance
8 kHz to 12 kHz	- (6.4 / 12.6 log f) dBV*	300 ohms
12 kHz to 90 kHz	(23 - 40 log f) dBV	135 ohms
90 kHz to 266 kHz	- 55 dBV	135 ohms

*dBV = 20 log₁₀ voltage in volts

(B) The root-mean-square (RMS) value of the metallic voltage components in the frequency range of 270 kHz to 6 MHz shall, averaged over 2 microseconds, not exceed -15 dBV. This limitation applies with a metallic termination having an impedance of 135 ohms.

MESSAGE TELECOMMUNICATIONS SERVICE TARIFF

Section 1
Original Sheet 11.6

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

All Connections - (Continued)

Longitudinal Voltage

(A) 4 kHz to 270 kHz

Center Frequency (f) of 8 kHz Band	Max. Voltage in All 8 kHz Bands	Longitudinal Terminating Impedance
8 kHz to 12 kHz	- (18.4 / 20 log f) dBV*	500 ohms
12 kHz to 42 kHz	(3 - 40 log f) dBV	90 ohms
42 kHz to 266 kHz	- 62 dBV	90 ohms

*dBV = 20 log₁₀ voltage in volts

(B) The root-mean-square (RMS) value of the longitudinal voltage components in the frequency range of 270 kHz to 6 MHz shall, averaged over 2 microseconds, not exceed -30 dBV. This limitation applies with a longitudinal termination having an impedance of 90 ohms.

2. To prevent the interruption or disconnection of an MTS message, it is necessary that the signal applied at the demarcation point be limited. Specifically, the signal at the demarcation point shall at no time have energy concentrated solely in the 2450 to 2750 Hz band. If there is signal power at the demarcation point in the 2450 to 2750 Hz band, it must not exceed the power present at the same time in the 800 to 2450 Hz band.

For Direct Electrical Connections

In addition to the regulations in B. preceding, customer premises equipment and communications systems which are connected to MTS on a direct electrical basis must comply with the following:

(MT)

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

1.2.21 Connections (cont'd)

(MT)

For Direct Electrical Connections - (Continued)

To prevent excessive noise and crosstalk, it is necessary that the power of the signal presented at the point-of-presence not exceed 12dB below one milliwatt when measured over any three second interval. To insure that this limit is not exceeded, the power of the signal which may be applied by the premises equipment or communications system to the demarcation point will be specified for each customer location. In no case shall the power exceed one milliwatt.

Acoustic or Inductive Connections

In addition to the regulations in B. preceding, customer premises equipment and communications systems which are connected to MTS on an acoustic or inductive basis must comply with the following:

To prevent excessive noise and crosstalk, it is necessary that the power of the signal which is applied by the equipment to the demarcation point located on the customer's premises be limited so that the signal power does not exceed 9dB below one milliwatt when averaged over any three second interval. However, to permit each customer, independent of distance from the point-of-presence, to supply signal power which at the point-of-presence approximates 12dB below one milliwatt when averaged over any three second interval, the Company, at the customer's request, will specify, for each customer location, the signal power at the demarcation point, which shall in no case exceed one milliwatt.

Recording of Two-Way Telephone Conversations

The FCC has adopted regulations which apply to the recording of two-way telephone conversations of MTS. These services are not represented as adapted to the recording of such conversations. However, customer-provided voice recording equipment may be connected to MTS. Its connection is subject to the Registration Program and to the following:

Recording of Two-Way Telephone Conversations - (Continued)

The FCC has adopted regulations which apply to the recording of two-way telephone conversations of MTS. These services are not represented as adapted to the recording of such conversations. However, customer-provided voice recording equipment may be connected to MTS. Its connection is subject to the Registration Program and to the following:

Direct Electrical Connection

(Filed in compliance with an Order adopted May 20, 1948, of the FCC, in Docket No. 6787.) Customer-provided voice recording equipment may be used to record two-way telephone conversations if a distinctive recorder tone is repeated at intervals of approximately fifteen seconds. This distinctive recorder tone is required when recording equipment is in use and is electrically connected with services of the Company. The distinctive recorder tone can be provided as part of: (1) the recording equipment, (2) the customer-provided registered or grandfathered protective circuitry, or (3) a grandfathered connecting arrangement.

The customer-provided voice recording equipment must be arranged so that it can be connected or disconnected (or switched on or off) at the will of the customer.

Recording Requirements - If a distinctive recorder tone is not used, one of the following conditions must apply:

1. All parties to the telephone conversation must give their prior consent to the recording of the conversation, and the prior consent must be obtained in writing or be part of, and obtained at the start of, the recording, or

2. All parties to the telephone conversation must be verbally notified at the beginning of the conversation and the notification must be recorded as part of the call, by the recording party.

Exceptions to the Requirement for the Recorder Tone

The distinctive recorder tone is not required:

1. When used by an FCC licensed broadcast station customer for the recording of two-way telephone conversations solely for broadcast over the air. (Filed in compliance with an Order of the FCC adopted December 13, 1972.)

MESSAGE TELECOMMUNICATIONS SERVICE

1.2 General Regulations (cont'd)

(MT)

1.2.21 Connections (cont'd)

The distinctive recorder tone is not required: - (Continued)

2. When used by the United States Secret Service of the Department of Treasury for recording two-way telephone conversations which concern the safety and security of the person of the President of the United States, members of his immediate family, or the White House and its grounds. (Filed in compliance with an Order of the FCC adopted January 22, 1975.)

3. When used by a broadcast network or by a cooperative programming effort, composed exclusively of FCC broadcast licensees, to record two-way telephone conversations solely for broadcast over the air by a licensed broadcast station. (Filed in compliance with an Order of the FCC adopted December 18, 1975.)

4. When used for recording at United States Department of Defense Command Centers of emergency communications transmitted over the Department of Defense's private line system when connected to MTS. (Filed in compliance with an Order to the FCC adopted May 19, 1976.)

5. When used by the United States Nuclear Regulatory Commission of the Department of Energy with respect to the telephone systems located at its Operations Center for the recording of two-way telephone conversations. (Filed in compliance with an Order of the FCC adopted January 29, 1981.)

Acoustic or Inductive Connections

Customer-provided voice recording equipment may not be connected to MTS for the recording of two-way telephone conversations by means of an acoustic or inductive connection, unless its use qualifies under the regulations, "Exceptions to the Requirement for the Recorder Tone."

1.2.23 Duplicate Bill Charges

(NR)

Subject to Company retention policies, availability of the bill(s), and ability of the Company to retrieve the bill(s), a customer may request a paper copy of their bill(s). A Duplicate Bill Charge may apply upon a customer's request for duplicate copies of their telephone bill(s) in accordance with the charges specified following, unless stipulated differently in the customer's contract. This service will be available where billing and technology exist.

The Duplicate Bill Charge will not be applied in the following instances:

1. When a customer is currently subscribing to a service to receive additional copies of their bills;
2. When customers request a copy of the bill because of non-receipt of an initial bill after new connect, transfer of change of address orders;
3. When customers have not received a bill due to Company error in the address of the bill;
4. When a customer requests a copy of the current monthly bill or final bill.

The Duplicate Bill is mailed via standard US mail only. The per bill copy charge is \$ 5.00.

With respect to any claim or suit, by a customer or others, for damages arising from delays, errors or omissions, or the failure to provide bill copies, Company liability, if any, shall not exceed the amount paid for the service.

1.3 METHOD OF APPLYING RATES

MISSOURI

1.3.1 Message Telecommunications Service rates between points (cities, towns or localities) are based on the air line distance between rate centers. In general, each point is designated as a rate center; certain small towns or localities are assigned adjacent rate centers with which they are closely associated for communication purposes or by community of interest.

1.3.2 For the purpose of determining air line mileages, vertical and horizontal grid lines have been established across the United States and Canada. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. This unit is the square root of 0.1, expressed in statute miles. A vertical (V) and a horizontal (H) coordinate is computed for each rate center from its latitude and longitude location by use of appropriate map-projection for determining air line mileages, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two rate centers is the air line mileage computed as explained in 1.3.3, following.

1.3.3 Determination of Air Line Mileages

Message Telecommunications Service

To determine the rate distance between any two rate centers proceed as follows:

1. Obtain the "V" and "H" coordinates (refer to AT&T FCC No. 10 Tariff, Mileage Information and Administrative Matters, Section 4 - Rate Centers, V&H Coordinates and Latas) for each rate center.
2. Obtain the difference between the "V" coordinates of the two rate centers. Obtain the difference between the "H" coordinates.
NOTE: The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.
3. Divide each of the differences obtained in 2. by three, rounding each quotient to the nearer integer.
4. Square these two integers and add the two squares. If the sum of the squares is greater than 1777, divide the integers obtained in 3. by three and repeat step 4. Repeat this process until the sum of the squares obtained in 4. is less than 1778.

1.3 Method of Applying Rates - (Continued)

1.3.3 Determination of Air Line Mileage - (Continued)

Message Telecommunications Service - (Continued)

6. Example - (Continued)

d. Squaring integers and adding, $73 \times 73 = 5329$ (MT)
 $240 \times 240 = 57600$
Sum of squared integers 62929

Sum of squared integers is greater than 1777, so divide integers in c. by three and repeat d.

e. Dividing integers in c. by three and rounding = 24 and 80. (MT)

f. Squaring integers and adding, $24 \times 24 = 576$
 $80 \times 80 = 6400$
Sum of squared integers 6976

Sum of squared integers is greater than 1777, so divide integers in e. by three and repeat f.

g. Dividing integers in (e) by three and rounding = 8 AND 27

Squaring integers and adding, $8 \times 8 = 64$
 $27 \times 27 = 729$
Sum of squared integers 793

This sum of squared integers is less than 1778 and was obtained after three successive divisions by three; therefore, "N" = 3.

h. Multiply final sum of squared integers 793
by factor 72.9 (corresponding to "N" = 3) $\times 72.9$
= $57,809.7$

i. Square root of 57,809.7 = 240 and a fraction, which is rounded up to 241 miles (fractional miles being considered full miles). The 241 miles are larger than the minimum of 121 rate miles applicable when "N" = 3, so the message rate mileage is 241 miles.

 $80 \times 80 = 6400$
Sum of squared integers 6976

Sum of squared integers is greater than 1777, so divide integers in e. by three and repeat f.

g. Dividing integers in (e) by three and rounding = 8 AND 27

Squaring integers and adding, $8 \times 8 = 64$
 $27 \times 27 = 729$
Sum of squared integers 793

This sum of squared integers is less than 1778 and was obtained after three successive divisions by three; therefore, "N" = 3.

h. Multiply final sum of squared integers 793
by factor 72.9 (corresponding to "N" = 3) $\times 72.9$
= $57,809.7$

i. Square root of 57,809.7 = 240 and a fraction, which is rounded up to 241 miles (fractional miles being considered full miles). The 241 miles are larger than the minimum of 121 rate miles applicable when "N" = 3, so the message rate mileage is 241 miles.
