6. SWITCHED ACCESS SERVICE-(Continued)

(AT) 6.6 Basic Service Elements-(Continued)

6.6.2 Basic Service Element Descriptions-(Continued)

C. Multiline Hunt Group-(Continued)

2. Preferential Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II. Where available, this alternative is only provided in electromechanical end offices. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to establish a separate hunting list to be associated with each terminal in a hunt group. At the customer's option, this list may or may not include all terminals in the hunt group. When a call is made directly to a busy terminal in a multiline hunt group equipped with preferential hunting, a linear hunt is performed over the preferential hunt terminals in the order requested by the customer. The call will terminate in the first idle terminal in the preferential hunt list. If all of the terminals in the preferential hunt are busy, and if the hunt list did not include all lines in the hunt group, hunting continues sequentially until an idle terminal is encountered or the last terminal in the hunt group is encountered. If all terminals are busy, a busy tone will be returned to the calling party. This alternative is not available with the Uniform Call Distribution Arrangement and Nonhunting Number Arrangement BSEs.

3. Regular Line Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II in electronic and electromechanical end offices where technically feasible. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to sequentially access terminals in a hunt group. Hunting begins with the terminal number associated with the called number and continues sequentially until an idle terminal is found or the last terminal number is reached. If no idle terminal number is found, a busy tone is returned to the calling party.

6.6.2 Basic Service Element Descriptions-(Continued)

D. Nonhunting Number Arrangement

Available with Circuit Switched - Line Side in association with Multiline Hunt Group or UCD Arrangement. Where available, this BSE is only provided in Telephone Company electronic end offices.

This BSE provides an arrangement to access an individual line within a Multiline Hunt Group or Uniform Call Distribution Arrangement when the line is idle. When the Nonhunting Number is dialed and the line is busy, a busy tone will be provided to the caller.

E. Queuing

Available with Circuit Switched - Line side in association with the Uniform Call Distribution (UCD) Arrangement BSE and where facilities permit. Where available, this BSE is only provided in Telephone Company electronic end offices.

When all terminals in a Uniform Call Distribution Arrangement are busy, queuing allows for an incoming call to be placed in queue to await an available terminal in the UCD Arrangement. When a call is placed in queue, audible ringing is returned to the customer and no further indication is sent until a terminal completes the call. The call that has been in queue the longest will be the first call serviced when a terminal becomes available. The maximum number of calls that can be placed in queue is dependent upon the total number of lines in the multiline hunt group. If the incoming call cannot be placed in queue, the calling party will receive a busy tone.

F. Recorded Announcements

Available with Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternatives B and D and in association with Queuing or Remote Make Busy. Where available, this BSE is only provided in electronic end offices.

This BSE provides for standard announcements on calls. When combined with Queuing, calls receive a timed audible ringing tone followed by a repeating announcement that can be separated by silence or audible ringing tone as selected by the customer. When combined with Remote Make Busy or Remote Make Busy - Trunk Side, announcements do not repeat. Calls receive only a timed audible ringing tone followed by an announcement.

(AT) 6.6 Basic Service Elements-(Continued)

6.6.2 Basic Service Element Descriptions-(Continued)

G. Remote Make Busy

Available with Circuit Switched - Line Side and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place lines into a busy or overflow condition by customer activation of a CPE key or toggle switch located at the customer's premises. When requested for lines arranged in a Multiline Hunt Group, Remote Make Busy will be provided to the entire hunt group. Calls to lines placed in a busy or overflow condition will receive busy tones. Lines remain in the busy or overflow condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements. Charges for Recorded Announcements are in addition to charges for the Remote Make Busy BSE. Recorded Announcements are described in Paragraph 6.6.2, preceding.

Provisioning this BSE requires the use of a DNAL BSA to pass the network control information used to place the line(s) into a busy or overflow condition (or to release those lines for use once they have been busied out). The DNAL must be associated with the BSA-A line(s) arranged for use with the BSE. Rates and charges for the DNAL BSA are in addition to the rates and charges for the associated line side BSA and the BSE.

H. Remote Make Busy - Trunk Side

Available with Circuit Switch - Trunk Side Alternatives B and D and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place a Circuit Switched - Trunk Side Alternative B or D trunk or trunk group into a busy condition by customer activation of a CPE key or toggle switch located at the customer's premises. This BSE is available on a trunk group basis. If only one trunk is to be busied out, it must be in a trunk group separate from other trunks which are not to be busied out. Calls to trunks placed in a busy condition will receive busy tones. Trunks remain in the busy condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements or Alternate Traffic Routing. Charges for Recorded Announcements and Alternate Traffic Routing are in addition to charges for Remote Make Busy - Trunk Side. Recorded Announcements and Alternate Traffic Routing are described in Paragraph 6.6.2.

The DNAL must be associated with the BSA-B or BSA-D trunk(s) arranged for use with the BSE. Rates and charges for the DNAL BSA are in addition to the rates and charges for the trunk side BSA and the BSE.

I. Uniform Call Distribution (UCD) Arrangement

Available with Circuit Switched - Line Side in most Telephone Company electronic end offices.

This BSE provides for an even distribution of calls over the available lines in a Multiline Hunt Group. This BSE is not available with any alternative of the Multiline Hunt Group BSE.

(AT) J. Flexible Automatic Number Identification (Flex ANI)

Available with BSA-D in suitably equipped end offices and in association with the ANI BSE.

Provides the ability to add values to the existing information indicators (ii) that are available with the ANI BSE. The customer will receive all new ii codes that are assigned by the North American Numbering Plan Administrator as they become available and are activated in the Telephone Company switches. Flex ANI is provided per end office and on a Carrier Identification Code (CIC) basis.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

6.5.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. The Telephone Company maintains the right to apply protective controls on any traffic that it carries over its network, including an IC's Switched Access Service, in order to prevent unsatisfactory performance to other users.

6.5.2 Design and Traffic Routing of Switched Access Service

The Telephone Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy hour minutes of capacity are ordered unless the IC orders the optional feature provision of other than Telephone Company-selected traffic routing. The Telephone Company shall also decide if capacity is to be provided by originating only, terminating only or two-way trunk groups unless the IC orders the optional feature IC specification of feature group directionality. Finally, the Telephone Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. However, for Feature Group B, the IC may order the optional feature IC Specification of Local Transport Termination. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans.

6.5.3 Provision of Service Performance Data

With the agreement of the Telephone Company, service performance data for an IC's Switched Access Service may be made available to the IC, based on previously arranged intervals and format. This data may include, but are not limited to, IC equipment blockage, failure results and transmission performance. If the data are to be provided through a mechanized exchange of data, the cost of such exchange will be determined on an individual-case basis and must be borne by the IC. Provision of the data in paper format will be at no charge.

Replacing Original Sheet 59

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

(MT)(FC) 6.7 Transmission Specifications

(AT) Each Switched Access Service transmission path is provided with standard transmission performance. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or routed via an access tandem. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon notification by the customer that the data parameters set are not being met, conduct tests independently or in cooperation with the customer and take any necessary action to insure that the data parameters are met.

(AT) Transmission specifications are set forth in appropriate Technical
(RT) References in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of

(AT)(CT) FGB, FGC, FGD, BSA-B, BSA-C and BSA-D are set forth in appropriate
(RT) Telephone Company Technical References.

The Telephone Company will maintain existing transmission specifications on functioning service configurations installed prior to the effective date of this tariff except that service configurations having performance specifications exceeding the standards listed in this provision will be maintained at performance levels specified in this tariff and the appropriate Technical Reference Publication.

(AT) The specific applications in terms of the Feature Groups, line side or
(AT) trunk side Basic Serving Arrangements, and Interface Groups with which the
(AT) Feature Group or line side or trunk side Basic Serving Arrangement standard transmission performances are provided as set forth in Paragraphs 6.2.1(C),
(MT) 6.2.2(C), 6.2.3(C) and 6.2.4(C), preceding.

(AT) The specific applications in terms of the line side or trunk side Basic Serving Arrangements and the interface groups with which the line side or trunk side Basic Serving Arrangement standard transmission performances are provided as described in Paragraph 6.3.5. For the DNAL BSA, the transmission specifications for each available interface group are as set
(AT) forth in Technical Reference TR-NPL-000336.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.4 Trunk Group Measurements Reports

With the agreement of the Telephone Company, trunk group data in the form of usage in CCS, peg count and overflow, where technologically feasible, will be made available to the IC based on previously agreed to intervals.

6.5.5 Determination of Number of Transmission Paths

The Telephone Company will determine the number of Switched Access Service transmission paths to be provided for the Switched Access busy hour minutes of capacity ordered. A transmission path is a communication path within the frequency bandwidth of approximately 300 to 3000 Hz or a derived communication path of a frequency bandwidth of approximately 300 Hz to 3000 Hz provided over a high frequency analog facility or a high speed digital facility between an IC, End User or Telephone Company location and another IC, End User or Telephone Company location. The number of transmission paths will be developed using the total busy hour minutes of capacity by type (as described in Paragraph 6.1.3, A., preceding) for the end offices for each Feature Group ordered from an IC terminal location. The total busy hour minutes of capacity by type for the Feature Group end office will be converted to transmission paths using standard Telephone Company traffic engineering methods for all Feature Groups except for FGA, which will be converted on the basis of 30 busy-hour minutes of capacity per transmission path. The number of transmission paths provided shall be the number required based on (1) the use of access tandem switches and end office switches, (2) the use of end office switches only, or (3) the use of tandem switches only.

6.5.6 Determination of Number of End Office Transport Terminations

For analog entry switches, a termination will be provided for each transmission path provided. For digital entry switches, an equivalent termination will be provided for each transmission path provided.

6.5.7 Design Blocking Probability

The Telephone Company will design the facilities used in the provision of Switched Access Service to meet the blocking probability criteria as set forth in Paragraphs 6.5.7, A. through D., following.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.7 Design Blocking Probability-(Continued)

The Telephone Company will maintain existing blocking performance on service configurations installed prior to January 1, 1984. All service configurations installed after January 1, 1984, will conform to the blocking objectives contained in this Tariff, except as follows: Where local facility conditions cannot support the blocking objectives contained in this Tariff, blocking objectives that can be supported will be uniformly applied to all IC's.

- A. For Feature Group A, no design blocking criteria apply.
- B. For Feature Groups B and C, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the first point of switching when traffic is directly routed without an alternate route. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- C. For Feature Group D, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- D. The Telephone Company will perform routine measurement functions except on Feature Group A to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables.

BY 1st R.S. #51
PUBLIC SERVICE COMMISSION
OF MISSOURI

- 1. For transmission paths carrying only first routed traffic direct between an end office and an IC terminal location without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

6. SWITCHED ACCESS SERVICE--(Continued)

6.6 Obligations of the IC

In addition to the obligations of the IC set forth in Section 2, preceding, the IC has certain specific obligations pertaining to the use of Switched Access Service. These obligations are as follows:

6.6.1 Report Requirements

IC's are responsible for providing the following reports to the Telephone Company, when applicable.

A. Jurisdictional Reports

When an IC orders Switched Access Service for both interstate and intrastate use, the IC is responsible for providing reports as set forth in Section 2, Paragraph 2.3.14, preceding. Changes will be apportioned in accordance with those reports. The method to be used for determining the interstate charges is set forth in Section 2, Paragraph 2.3.15, preceding.

B. LATA Default Percent Interstate Use (PIU) Report

When an IC orders Switched Access to any end office in a LATA, it must provide a projected percentage of interstate use that will serve as a default PIU for the entire LATA. This figure will be used to apportion charges for usage measured at end offices to which the IC has not ordered capacity.

(FC) 6.8 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

(FC) 6.8.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. Generally, service levels are considered acceptable only when both end users and customers are able to establish connections with little or no delay encountered within the Telephone Company network. The Telephone Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of traffic, over any traffic carried over its network, including that associated with a customer's Switched Access Service. Generally, such protective measures would only be taken as a result of occurrences such as failure or overload of Telephone Company or customer facilities, natural disasters, mass calling or national security demands. In the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruptions as set forth in Paragraph 2.4.4, preceding, except as specified in 2.4.4, c, preceding.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

RECEIVED
JUN 27 1986
MISSOURI
Public Service Commission

6.5.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. Generally, service levels are considered acceptable only when both end users and customers are able to establish connections with little or no delay encountered within the Telephone Company network. The Telephone Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of traffic, over any

6. SWITCHED ACCESS SERVICE-(Continued)

6.6 Obligations of the IC-(Continued)

6.6.1 Report Requirements-(Continued)

C. Code Screening Reports

When an IC orders service class routing, trunk access limitation or call gapping arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

6.6.2 On- and Off-Hook Supervision

The IC facilities shall provide the necessary on- and off-hook supervision.

6.6.3 Trunk Group Measurements Reports

With the agreement of the IC, trunk group data in the form of usage in CCS, peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Telephone Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.8 Obligations of the Telephone Company-(Continued)

6.8.2 Design and Traffic Routing of Switched Access Service

When ordering FGC, FGD, BSA-C or BSA-D Switched Access Services, the customer may specify whether it desires routing to be direct to an end office or through an access tandem switch. The customer is required to specify whether the capacity should be provided by originating only, terminating only or two-way trunk groups.

For FGA, FGB, BSA-A and BSA-B, the line or trunk directionality and traffic routing of the Switched Access Service between the customer's premises and the entry switch are determined by the customer's order for service.

The Telephone Company will compare the customer's request with its own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For FGB or BSA-B, the customer may order the optional feature Customer Specification of Local Transport Termination.

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

Additionally, when the customer has ordered a dedicated FGD or BSA-D trunk group with the MicroLink I Access Capability feature, the Telephone Company will ensure that these facilities are capable of supporting 56 kbps digital data.

(AT) When the customer has ordered a dedicated FGD or BSA-D trunk group with SS7 Signaling and
| 64 CCC, where technically feasible and facilities permit, the Telephone Company will ensure
| that these facilities are
(AT) capable of supporting 64 Kbps digital data.

6.7 Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service.

6.7.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements.

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided. For billing purposes, each month is considered to have 30 days.

B. Usage Rates

Usage rates are rates that apply only when a specific rate element is used. These are applied on a per access minute basis. Access Minute Charges are accumulated over a monthly period.

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service). The three types of nonrecurring charges that apply for Switched Access Service are: installation of service, installation of optional feature(s) and service rearrangements.

1. Installation of Service

Nonrecurring charges apply to each service (e., busy-hour minutes of capacity) installed.

~~CANCELLED~~

2. Installation of Optional Features

Nonrecurring charges apply for the installation of the various optional features available with the Switched Access Service Local Transport rate element. The other optional features are installed at no additional cost to the IC other than the cost of the basic service (busy-hour minutes of capacity nonrecurring charge) with which the features are associated.

The number of transmission paths provided shall be the number required based on (1) the use of access tandem switches and end office switches, (2) the use of end office switches only, or (3) the use of tandem switches only.

6.5.6 Determination of Number of End Office Transport Terminations

For analog entry switches, a termination will be provided for each transmission path provided. For digital entry switches, an equivalent termination will be provided for each transmission path provided.

6.5.7 Design Blocking Probability

The Telephone Company will design and monitor the facilities used in the provision of Switched Access Service to meet the blocking probability criteria as set forth in Paragraphs 6.5.7-A, through D., following.

ACCESS SERVICES

- 6. SWITCHED ACCESS SERVICE-(Continued)
- 6.7 Rate Regulations-(Continued)
- 6.7.1 Types of Rates and Charges-(Continued)
- C. Nonrecurring Charges-(Continued)
- 3. Service Rearrangements

RECEIVED
DEC 20 1983
MISSOURI
Public Service Commission

Nonrecurring charges apply for service rearrangements. Service rearrangements are changes to existing services that do not result in a change to any of the following: (1) address of the IC terminal location or the end office, (2) Feature Group type, or (3) type of capacity. Changes of this nature constitute a discontinuance and start of service.

Service Rearrangement Charges are based on the nonrecurring (i.e., installation) charge of the service being changed. Following are the service rearrangements that are allowable for Switched Access Service and the appropriate levels of charging.

<u>Type of Change</u>	<u>Level of Charging</u>
Change in Access Connection of Transport Termination Supervisory Signaling (e.g., loop start to ground start)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in type of Address Signaling (e.g., dial pulse to multifrequency)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Access Connection Interface Group (e.g., two-wire to group level)	Full Access Connection non-recurring charge (\$/BHMC) for the capacity being changed
Change in Transport Termination (e.g., FGB standard to rotary dial station signaling)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Provision of Other Than Telephone Company Selected Traffic Routing (e.g., tandem in lieu of direct, to direct)	Full Access Connection non-recurring charge (\$/BHMC) for capacity being changed
Change in Dedicated Access Line Service (e.g., change type of termination from line to trunk or change end office switching features).	1/2 of the SAL nonrecurring charge as set forth in Section 7, Paragraph 7.5.4, following per changed.

6. SWITCHED ACCESS SERVICE-(Continued)

(FC) 6.8 Obligations of the Telephone Company-(Continued)

(FC) 6.8.7 Design Blocking Probability-(Continued)

(AT) A. No design blocking criteria apply for FGA, FGB, BSA-A, BSA-B or DNAL.

(AT) B. The design blocking objective for FGC and BSA-C will be no greater than one percent (.01) between the point of termination at the IC terminal location and the first point of switching when traffic is directly routed without an alternative route. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(AT) C. The design blocking objective for FGD and BSA-D will be no greater than one percent (.01) between the point of termination at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods as set forth in appropriate Technical References will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(CT)(RT)
(RT)

D. The Telephone Company will perform routine measurement functions to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. Dedicated trunk groups provided for the purpose of trunk access limitation will be taken into consideration when recommending additional capacity. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables:

1. For transmission paths carrying only first routed traffic directly between an end office and an IC terminal location without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

A. (Continued)

- When both line side (i.e., FGA) and trunk side (i.e., FGB, FGC and FGD) Switched Access Service are used in association with the resale of Dedicated Access Line Service, the number of Dedicated Access Line Services to be associated with each line side and trunk side Switched Access Service. If this split is not reported, the Telephone Company will assume all the Dedicated Access Line Services with 2500 or more originating access minutes are to be associated with line side Switched Access Service.

The preceding information and the information required in Paragraph B, following, must be reported for each LATA in which the IC is reselling services. For those LATA's that are multistate LATA's, the IC must report the information by state within the LATA. In order for the rate treatment in Paragraph D., following, to apply, both the Switched Access Service and the associated Dedicated Access Line Services must be in the same state and be provided by the same Telephone Company.

- B. Each of the Switched Access Services used by the IC in association with the resale of Dedicated Access Line Service must be in the same LATA as the Dedicated Access Line Services in order for such Switched Access Service to be rated as set forth in Paragraph D, following. The Switched Access Service must also be connected either directly or indirectly to the IC terminal location at which the associated Dedicated Access Line Services are terminated. Direct connections are those where the Switched Access Service is terminated at the same IC terminal location. Indirect connections are those where the Switched Access Service is terminated at a second IC terminal location in the same LATA which is in turn connected to the first IC terminal location by facilities that can be used by the Switched Access Service to reach the first IC terminal location (i.e., the IC terminal location where the Dedicated Access Line Services are terminated). When more than one IC terminal location is involved in a LATA, the IC shall notify the Telephone Company in writing and shall report the locations of the involved IC terminal locations.

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued) Missouri Public Service Commission

C. For the initial month, the data that the IC reports as set forth in Paragraphs A and B, preceding, will be used by the Telephone Company to determine the rates and charges as set forth in Paragraph D, following. For each subsequent month, the IC must update the report per Paragraphs A and B, preceding, for each LATA for the preceding monthly period unless the Telephone Company notifies the IC that it has sufficient information to substantiate the rate treatment set forth in Paragraph D, following. The monthly period used to determine the 2500 originating access minutes per Dedicated Access Line Service shall be the most recent monthly period for which the IC has received a bill for the Dedicated Access Line Services. This updated report shall show the bill date for the Dedicated Access Line Services. The report shall be delivered to the Telephone Company at a location specified by the Telephone Company no later than 15 days after the bill date shown on the Dedicated Access Line Service bill. If an updated report is required but is not received by the Telephone Company during the monthly period after the initial monthly period, the Telephone Company will assume there are no resold Dedicated Access Line Services associated with Switched Access Services in the LATA. The rate treatment set forth in Paragraph D, following, will not apply in these cases.

D. When the IC reports Switched Access Services associated with the resale of Dedicated Access Line Services in a LATA as set forth in Paragraphs A, B and C, preceding, and the Telephone Company verifies the reports are accurate, such Switched Access Services will be rated as follows:

I. For line side Switched Access Services (i.e., FGA) in a LATA associated with the resale of Dedicated Access Line Service, the LATA access minutes used to determine the charges for Local Transport, Local Switching (LS1), Line Termination and Intercept will be reduced by 2500 access minutes for each Dedicated Access Line Service with at least 2500 originating access minutes reported by the IC as set forth in Paragraphs A, B or C, preceding. However, the access minutes for the line side Switched Access Services in the LATA, adjusted as set forth in this or any other section of this Tariff, that are billed to an IC in a monthly period shall not be less than zero. When the prorate in more than one mileage band, the prorate will be applied to each mileage band in proportion to the actual usage in that band. The adjustment will be made to the involved IC account no later than either the next bill date or the one subsequent to that, depending on when the report is received.

6.9 Obligations of the IC-(Continued)

6.9.1 Report Requirements-(Continued)

(CT) B. Jurisdictional Reports - 800 NPAS/900 Access Service

When an IC orders service class routing or trunk access limitation, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

(CT) 1. 800 Number Portability Access Service (NPAS)

(RT)

(AT) (a) The jurisdictional report requirements for 800 NPAS will apply to 800 access minutes and queries.

For 800 NPAS, where jurisdiction can be determined from the call detail, the Telephone Company will bill according to such jurisdiction by developing a projected interstate percentage. The projected interstate percentage will be developed on a monthly basis, by end office, when the 800 NPAS access minutes are measured by dividing the measured interstate originating 800 NPAS access minutes (the access minutes where the calling number is in one state and the called number is in another state) by the total originating 800 NPAS access minutes.

For 800 NPAS, where the call detail is insufficient to determine jurisdiction, the customer will provide an interstate percentage of 800 NPAS originating access minutes for each LATA from which the customer may originate 800 traffic.

If a customer does not provide the Telephone Company with an originating 800 NPAS PIU report that will be used when the call detail is insufficient to determine the jurisdiction, the Telephone Company will determine the interstate percentage of 800 NPAS usage as follows:

The Telephone Company will develop an interstate percentage on a monthly basis for each end office by dividing the customer's measured MTS usage interstate originating access minutes by the customer's total MTS usage originating access minutes for which sufficient call detail exists to determine the jurisdiction.

BY 7th R.S. #69
Public Service Commission

Public Service Commission

When an IC orders service class ^{relative to} trunk access limitation, it must report the number of ^{public} and ^{one} appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

1. 800 Access Service

Customers ordering Joint Provided 800 Access Service must provide the Telephone Company with an 800 Network Data Report. Customers ordering non-joint provided 800 Access Service have the option to provide the Telephone Company with either an 800 Network Data Report or, an 800 Access Service Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) Report. The Telephone Company will work cooperatively with the customer should the customer request to change his reporting method. In such case, the customer must provide written notification to the Telephone Company specifying which reporting option the customer will utilize. Such requests to change the reporting method will be accepted by the Telephone Company no more than one time in a six (6) month period.

- (a) For intrastate traffic, the 800 Network Data Report will reflect all 800 telephone numbers that originate and terminate within the state of Missouri. For intrastate traffic, each 800 telephone number provided in the 800 Network Data Report will reflect one of the following depending on whether the customer has ordered Joint Provided or Non-Joint Provided 800 Access Service:

Joint Provided 800 Access Service Calls

The 10-digit POTS number associated with the WATS Access Line to which the 800 call will terminate.

Non-Joint Provided 800 Access Service Calls

The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.

B. Code Screening Reports

When an IC orders service class routing, trunk access limitation or call gapping arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

(CP)

Customers ordering Joint Provided 800 Access Service must provide the Telephone Company with an 800 Network Data Report. Customers ordering non-joint provided 800 Access Service have the option to provide the Telephone Company with either an 800 Network Data Report or, an 800 Access Service Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) Report. The Telephone Company will work cooperatively with the customer should the customer request to change his reporting method. In such case, the customer must provide written notification to the Telephone Company specifying which reporting option the customer will utilize. Such requests to change the reporting method will be accepted by the Telephone Company no more than one time in a six (6) month period.

- (1) For intrastate traffic, the 800 Network Data Report will reflect all 800 telephone numbers that originate and terminate within the state of Missouri. For intrastate traffic, each 800 telephone number provided in the 800 Network Data Report will reflect one of the following depending on whether the customer has ordered Joint Provided or Non-Joint Provided 800 Access Service:

Joint Provided 800 Access Service Calls

The 10-digit POTS number associated with the WATS Access Line to which the 800 call will terminate.

Non-Joint Provided 800 Access Service Calls

The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

D. (Continued)

1. (Continued)

Where the interexchange service for which the Dedicated Access Line Service is provided is billed to the IC by service group and/or in a unit other than minutes, the IC shall convert these as follows:

- If the billing is in hours, convert the hours to access minutes by multiplying the hours by 60.
- If the billing is by service group, divide the total access minutes on the monthly bill by the number of Dedicated Access Line Services in the service group to determine the access minutes per Dedicated Access Line Service.

2. For each Dedicated Access Line Service used as set forth in Paragraph 1, preceding, to reduce the line side Switched Access Service access minutes in a LATA, a local business line rate as set forth in Paragraph 6.8.4, following, shall apply. The exchange involved shall be the exchange in which the IC terminal location at which the Dedicated Access Line Services are terminated is located. When more than one IC terminal location is involved, local business line rates for both exchanges shall be used. The number of involved Dedicated Access Line Services terminated at each location shall be used to determine the appropriate number of local business line rates. However, the number of local business line rates, as set forth in Paragraph 6.8.4, following, applied in a LATA shall not exceed the number of line side Switched Access Services provided to the IC (i.e., total number of busy-hour minutes of capacity divided by 30).

E. When the IC notifies the Telephone Company that Switched Access Service is to be used in association with the resale of Dedicated Access Line Service, the notification automatically grants the Telephone Company the right to audit (1) the IC terminal locations to verify the use of facilities as reported in Paragraphs A, B or C, preceding, and (2) all of the records, worksheets and back-up documentation for each report as set forth in Paragraphs A, B or C, preceding. The Telephone Company

The revised report will serve as the basis for the next three months billing and will be effective on the bill date for that service. No prorating or backbilling will be done based on the report. If the initial 800 Access Service PIIL/CCL report or a quarterly update has not been received from the customer, the Telephone Company may determine the intrastate intraLATA percentage as described below.

If the customer does not provide the Telephone Company with either an 800 Network Data Report or an 800 Access Service PIIL/CCL report as specified above, the Telephone Company will determine the jurisdiction of all the originating intrastate 800 traffic to be intrastate interLATA and bill the 800 Access Service customer accordingly.

PIIL/CCL reporting is required only if there is a difference between interLATA and intraLATA rates. If these rates are identical, no report need be submitted.

2. 900 Access Services

Customers offering both interstate and intrastate originating 900 traffic within a LATA, must provide to the Telephone Company a 900 Access Service Percent Interstate Usage (PIU) report as specified in the Telephone Company's Access Service Tariff F.C.C. No. 68. Customers must also report whether they are providing only intrastate originating 900 traffic within the LATA.

6.9.3 Trunk Group Measurements Reports

With the agreement of the IC, trunk group data in the form of usage in CCS, peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Telephone Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

(MT) 6.10 Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service. The rates and charges apply to both intrastate intraLATA and intrastate interLATA service.

6.10.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements. For billing purposes, each month is considered to have 30 days.

(MT)
|
(MT)

6.10.1 Types of Rates and Charges-(Continued)

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided.

B. Usage Rates

(AT) Usage rates for each line or trunk are rates that apply on a per call or a per access minute basis when a specific rate element is used. Access minute charges are accumulated over a monthly period.

(AT) Usage rates for FGD or BSA-D Service utilizing the Multiple 64 CCC feature will apply on a per unit basis. For Multiple 64 CCC, a unit represents a FGD or BSA-D trunk with 64 Kbps of bandwidth. The Multiple 64 CCC feature (n x 64 Kbps) is available in increments from 64 Kbps to 1536 Kbps bandwidth, where n may be from 1 to 24 and represents the incremental number of 64 Kbps of bandwidth per call.

(AT)

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service).

1. Installation of Service

A Per Line or Per Trunk Installation Charge will apply to installation of each Feature Group Service (FGA, FGB, FGC and FGD) and to each Basic Serving Arrangement (BSA-A, BSA-B, BSA-C and BSA-D). The Per Line Installation Charge is applicable to FGA and BSA-A. The Per Trunk Installation Charge is applicable to FGB, FGC, FGD, BSA-B, BSA-C and BSA-D.

An installation charge will apply per DNAL termination to each DNAL.

An Installation Charge is applicable on a first and additional line, trunk or DNAL termination basis. If a customer orders multiple lines, trunks or DNAL terminations on the same Access Order, the first line, trunk or DNAL termination is assessed the "first" installation charge and each additional line, trunk or DNAL termination is assessed the "additional" installation charge.

(AT)

0+900 Access Service Installation Nonrecurring Charge

The 0+900 Access Service Installation Nonrecurring Charge applies to customers who request 0+900 Access Service. The nonrecurring charge will apply on a per end office basis for those end offices within the LATA that require modification to allow 0+900 dialing. The nonrecurring charge will apply whether the request for 0+900 Access Service is concurrent with or subsequent to the initial activations of the NXX code(s).

In addition to the 0+900 Access Service Installation Nonrecurring Charge, the 900 Access Service NXX Activation Charge will apply. If the customer requests to receive 0+900 Access Service at the time of subsequent activation of the 900 NXX code(s), the 900 Access Service NXX Activation Charge will apply for the newly established 900 NXX code(s) and the existing 900 NXX code(s).

(AT)

5. Service Rearrangements

Service Rearrangements are changes to existing services which do not result in either a change in the minimum period requirements as set forth in Paragraph 5.2.6, preceding, or a change in the physical location of the point of termination at the customer's premises or the customer's end user's premises.

Changes which result in the establishment of new minimum period obligations are treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in Paragraph 6.10.10, following.

A change in the customer of record (i.e., existing Access Service is provided and billed to a different entity, such as a different company as opposed to a company name change) is when the new customer assumes liability for all current and prior charges for the service(s) and has complied with the regulations and conditions as set forth in Paragraph 2.2.1. In this case only applicable Administrative Change Charges, as specified in Paragraph 6.11.4, shall apply. If the customer has not complied with Paragraph 2.2.1, this service rearrangement will be considered a disconnect and installation of new service.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE--(Continued)

6.7 Rate Regulations--(Continued)

6.7.1 Types of Rates and Charges--(Continued)

C. Nonrecurring Charges--(Continued)

(FC)

4. Service Rearrangements

(AT)

Service Rearrangements are changes to existing services which do not result in either a change in the minimum period requirements as set forth in Paragraph 5.2.6, preceding, or a change in the physical location of the point of termination at the customer's premises or the customer's end user's premises.

Changes which result in the establishment of new minimum period obligations are treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in Paragraph 6.7.7, following.

A change in the customer of record (i.e., existing Access Service is provided and billed to a different entity, such as a different company as opposed to a company name change) is when the new customer assumes liability for all current and prior charges for the service(s) and has complied with the regulations and conditions as set forth in Paragraph 2.2.1. In this case only applicable Administrative Change Charges, as specified in Paragraph 6.8.4, shall apply. If the customer has not complied with Paragraph 2.2.1, this service rearrangement will be considered a disconnect and installation of new service.

(AT)

A customer may request one or more of the following Service Rearrangements. An Access Order Charge will apply as set forth in Paragraph 5.2.2.

(RT)

a. Administrative changes will be made without charge(s) to the customer as follows:

(AT)

- Change of customer name, (i.e., the customer of record does not change, but the customer of record changes its name, e.g., ABC Communications changes to All Business Concepts Communication.),
- Change of customer's or customer's end user premises address when the change of address is not a result of a physical relocation of the service,
- Change in billing data (name, address, or contact name or telephone number of the bill recipient changes, but the customer of record does not change)

(AT)

All changes to existing services, including 800 and 900 Access Services, other than changes involving administrative activities only and extension of the point of termination will be treated as a discontinuance of the existing service and an installation of a new service. The nonrecurring charge described in (1), preceding, will apply for this work activity.

(DT)

Administrative changes will be made without charge(s) to the customer. Administrative changes are as follows:

- Change of customer name, (i.e., the customer of record only changes its name),
- Change of customer or customer's end user premises address when the change of address is not a result of a physical relocation of equipment,
- Change in billing data (name, address, or contact name or telephone number),
- Change of agency authorization,
- Change of customer circuit identification,
- Change of billing account number,
- Change of customer or customer's end user contact name or telephone number, and
- Change of jurisdiction.

4. 800/900 Access Service NXX Activation Charge

The 800/900 Access Service NXX Activation Charge applies for all 800 Access Service NXX code activations subsequent to the customer's initial request for activation of 800 NXX code(s) within the LATA. The 800/900 Access Service NXX Activation Charge also applies for all 900 Access Service NXX code activations subsequent to the customer's initial request for activation of 900 NXX code(s) within the LATA.

Access Services Tariff
Section 6
Original Sheet 71

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total number of Feature Groups (by type of Feature Group by type of Busy-hour-Minutes-of-Capacity) provided to each end office. The minimum monthly charge consists of the following elements:

For those rate elements that are billed a flat monthly rate, i.e., Local Transport Optional Features, the minimum monthly charge is the monthly rate as set forth in Paragraph 6.8.2, B., following.

The minimum monthly charge for the Local Switching, Line Termination and Intercept rate elements is the charge set forth in Paragraph 6.8.3, A., B. and C., following, for the actual usage for the month, adjusted as set forth in Paragraph 6.7.3, D.1., preceding.

For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month adjusted as set forth in Paragraph 6.7.3, D.1., preceding, is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.7.5, following. Rates for actual usage are set forth in Paragraph 6.8.2, A., following.

6.7.5 Minimum Monthly Usage Charge (MMUC)

The Minimum Monthly Usage Charge (the minimum transport charge) varies by mileage band and capacity.

The MMUC is as follows:

Mileage Bands	Minimum Transport Charge Per BHMC*
0 to 1	\$.3726
Over 1 to 8	.8553
Over 8 to 16	.9908
Over 16 to 25	1.0670
Over 25 to 50	1.7191
Over 50 to 100	2.3965
Over 100	3.8361
