Re: Notice of Election and Withdrawal of BellSouth Long Distance, Inc. d/b/a/ AT&T Long Distance Service Tariffs Pursuant to §392.461, RSMo, enacted by House Bill No. 338

Dear Mr. Reed:

As a result of recent changes in state law governing the regulation of telecommunications services in Missouri, §392.461, RSMo was enacted on August 28, 2011 by House Bill No. 338. Section 392.461 allows telecommunications companies, upon notice to the Missouri Public Service Commission (“Commission”), to elect to be exempt from the requirement that they offer retail services to residential or business end users only through tariff, and to withdraw such tariffs. However, the law requires them to publish generally available retail prices on a website.

BellSouth Long Distance, Inc. d/b/a AT&T Long Distance Service (“the Company”) hereby gives the Commission notice of its election to be exempt from tariff filing requirements relating to, and of its intent to withdraw, the below-listed tariff.

- Resale Interexchange Telecommunications Service Tariff - Missouri Tariff No. 2

This Notice of Election and Withdrawal shall become effective May 1, 2012. The Company will make available its rates, charges, terms and conditions for its retail telecommunications services on its website at www.att.com/service_publications.

Please refer any questions on this matter to me on (404) 829-7478.

Sincerely,

Kimberly Williams

TARIFF FORMAT

Service Commission

- A. **Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added.
- B. **Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of the various suspension periods and deferrals the Commission follows in its tariff approval process, the most current page number on file with the Commission is not always the tariff page in effect. Consult the check sheet for the page currently in effect.
- C. **Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2
- 2.1
- 2.1.1
- 2.1.1.A
- 2.1.1.A.1
- 2.1.1.A.1.(a)
- 2.1.1.A.1.(a).I
- 2.1.1.A.1.(a).I.(i)
- 2.1.1.A.1.(a).I.(i).(1)

- D. **Check Sheets** - When a tariff filing is made with the Commission an updated check sheet accompanies the filing. The check sheet lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There shall be no other symbols used on this page if these are the only changes made to it. The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

Pursuant to the Commission's rules, the Company reserves the right to examine the credit record of the Customer, using any lawful sources for determining credit standing. If the Customer's financial condition is unknown or unacceptable to the Company, the Customer may be required to provide the Company with a security deposit which the Company may apply against overdue charges. The amount of the security deposit shall be equal to two months' estimated usage and two months' service (i.e., monthly charges), or the maximum allowable by Commission rules, but may vary with the Customer's credit history and projected usage. An interest rate of 9% shall be credited annually upon the account of customers with deposits. If subsequent payment or usage patterns change, the Company may request an increase in or resubmission of the security deposit as appropriate. The Company may also require a security deposit before service is restored (along with the payment of overdue charges) from the Customer whose service has been discontinued for nonpayment of overdue charges. Such security deposit may be based on a new credit history (taking into account the discontinuance of service) and estimates of usage. The fact that a security deposit has been made in no way relieves the Customer from the prompt payment of bills upon presentation.

3.2 Timing of Calls

Billing for calls placed over the Company's network is based in part on the duration of the call as follows, unless otherwise specified in this tariff: Service Commission

- 3.2.1 Timing of each call begins when the called station is answered (i.e. when two way communications are established.) Answer detection is based on standard industry answer detection methods, including hardware and software answer detection. For Collect Calls, charges apply only if the called party accepts the responsibility for payment. For Person to Person Calls, charges apply only if the calling party is connected with the designated called party or an agreed upon substitute.
- 3.2.2 Chargeable time for calls ends when one of the parties disconnects from the call.
- 3.2.3 Unless otherwise specified in this tariff, the Initial Period for billing purposes is one (1) minute.
- 3.2.4 Unless otherwise specified in this tariff, Additional Period billing for usage after the Initial Period is in full one (1) minute increments.
- 3.2.5 The Company will not knowingly bill for unanswered calls. When a Customer indicates that he/she was billed for an incomplete call, the Company will reasonably issue credit for the call.
- 3.2.6 Time of day designations are used in this tariff to indicate rate period boundaries. Rate periods begin at the first time of day designation and continue up to but not including the second time of day designation.
- 3.2.7 Calls will be billed at the rate in effect during the call, with two rates applied if the call spans over more than one billing rate period.

3.4 Calculation of Distance

For mileage sensitive services, the distance between originating and terminating points of a call or private line facility are determined using vertical ("V") and horizontal ("H") coordinates for the serving wire center(s) or the Company access point(s) associated with the call or facility. For purposes of determining the airline mileage of a call the Company references the V and H coordinates as found in Telcordia's V&H Tape and NECA FCC Tariff No. 4. The use of coordinates for wire centers versus access points and the method for calculating actual distances varies based on the type of service and the form of access used to reach the Company network. (T)

For non-switched private line services, mileage measurements are based on the distance in airline miles between the Company access points associated with each end of the circuit. Distance measurements are determined using the mileage calculation method shown in Section 3.4.1. (T)

For outbound and inbound switched long distance services utilizing Switched Access Origination, mileage measurements are based on the airline distance between serving wire centers associated with the originating and terminating points of the call. The serving wire centers of a call are determined by the area codes and exchanges of the origination and terminating points. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2. (T)

For outbound switched long distance services utilizing Special Access Origination, mileage measurements are based on the distance in airline miles between the Company access point associated with the station utilizing Dedicated Access Lines and the serving wire center associated with the called station. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2. (T)

For inbound switched long distance services utilizing Special Access Termination, mileage measurements are based on the distance in airline miles between the serving wire center associated with the calling station and the Company access point associated with the station utilizing Dedicated Access Lines. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2. (T)
