1. Definitions (Cont'd)

Calling Number Delivery: This feature enables the customer to view on a display unit the calling party directory name and/or number (CPN) on incoming telephone calls. When a Caller ID is activated on a customer's line, the CPN of incoming calls are displayed at the called CPE during the first, long silent interval of the ringing cycle.

Per line blocking for the blocking of CPN will be available upon request, at no charge, to the following entities for lines over which the official business of the agency is conducted, including those at the residences of employees/volunteers, where an executive officer of the agency registers a need for blocking and provides the required certification to MCImetro a) private, nonprofit, tax exempt, domestic violence intervention agencies and b) federal, state, and local law enforcement agencies. The CPN will not be transmitted from a line equipped with this capability. Per line blocking is operational on a continuous basis but can be deactivated by the customer by dialing an access code immediately prior to placing a call. Line blocking customers can unblock their CPN information on a per call basis, at no charge, by dialing an access code (*82 on their touch tone pad or 1182 from a rotary phone) immediately prior to placing a call.

A customer may prevent the delivery of their calling name and/or number to the called party by dialing an access code (*67 on their touch tone pad or 1167 from a rotary phone) immediately prior to placing a call. The access code will activate per call blocking, which is available at no charge. If the calling party activated blocking, the CPN will not be transmitted across the line to the called party. Instead, Calling Line Identification customers will receive an anonymous indicator. This anonymous indicator notifies the Caller ID customer that the calling party has elected to block the delivery of their name and telephone number. The blocking of CPN will not be provided on calls originating from Customer Owned Pay Telephones. If the Caller ID customer also subscribes to Anonymous Call Rejection, the calling party will be routed to a telephone company recording advising the caller that the called party will not accept calls whose CPN has been blocked.

Any customer subscribing to Caller ID will be responsible for the provision of a display device, which will be located on the customer's premises. The installation, repair and technical capability of that equipment to function in conjunction with the feature specified herein will be the responsibility of the customer. MCImetro assumes no liability and will be held harmless for any incompatibility of this equipment to perform satisfactorily with the network features described herein.

Telephone CPN information transmitted via Caller ID is intended solely for the use of the Caller ID subscriber. Resale of this information is prohibited by this tariff. CPN will not be displayed if the called party is off-hook or if the called party answers during the first ring interval. CPN will be displayed for calls made from another central office only if it is linked by appropriate facilities. Caller ID is not available on operator handled calls.

Hunting: Routes a call to an idle Station line. With Serial Hunting, calls to a member of a hunt group will search from that point to the end of the group and stop. With Circular Hunting, calls directed to busy Station in the middle of a hunt group will "wrap around" to the beginning of the hunt list and search for an idle Station. The caller is connected to the first idle Station encountered.

Individual Case Basis: Rates for Special Access services will be determined on an Individual Case Basis (ICB). ICB rates will be structured to recover the Company's cost of providing the services and will be made available to customers in a non-discriminatory manner. Terms of specific ICB contracts will be made available to the Missouri Public Service Commission Staff upon request on a proprietary basis.

Interim Local Number Portability (LNP) (via Remote Call Forwarding (RCF)): Remote Call Forwarding allows a Local Line Customer to retain its existing Local Exchange Carrier telephone number by using this feature to port its telephone number to MCI Local Service. Monthly charges will apply per telephone number. A number of paths can be associated with this number to permit multiple simultaneous calls to be received. A maximum of 99 paths can be associated with a single ported number.

Service Commission

Multi-Frequency ("MF"): An inter-machine pulse-type used for signaling between telephone switches, or between telephone switches and PBX/key systems.

Non-Recurring Charges: The one-time initial charges for services or facilities, including but not limited to charges for construction, installation, or special fees, for which the Customer becomes liable at the time the Service Order is executed.

Off-Hook: The term "off-hook" denotes the active condition of a telephone exchange service line.

On-Hook: The term "on-hook" denotes the idle condition of a telephone exchange service line.

Presubscription: An arrangement whereby a Customer may select and designate to the Company an Exchange Carrier it wishes to access, without an access code, for completing intraLATA toll calls. The selected Exchange Carrier is referred to as the End User's Primary Interexchange Carrier (PIC-2).

Recurring Charges: The monthly charges to the Customer for services, facilities and equipment, which continue for the agreed upon duration of the service.

Remote Call Forwarding (RCF): RCF allows all calls dialed to a telephone number equipped for RCF service to be automatically forwarded to another dialable telephone number. This service enables a customer to list a local directory number that is forwarded to a different city or exchange. Each RCF service allows for the forwarding of one call at a given time. The RCF customer is responsible for any applicable usage rates/charges between the RCF number and the terminating number.

Conditions:

1. RCF service is not offered when the answering location for a forwarded call is a coin/coinless, Semi-public/public telephone service.
2. The Company cannot guarantee the grade of transmission on remotely forwarded calls. Normal grade end-to-end transmission is not guaranteed because transmission characteristics may vary depending on distance and routing required to complete the forwarded portion of the call.
3. RCF service will only be provided when, in the judgement of the Company, the customer subscribes to sufficient RCF facilities at the terminating (answering) location to adequately handle calls without impairing, disrupting or deteriorating any services offered by the Company. In the event that the use of RCF service causes impairment, disruption or deterioration, the Company shall have the right to discontinue the RCF service.

RCF service is required for each directory number being forwarded. A customer can request additional RCF service (call paths) provided the customer has a receiving group of lines equal to the number of RCF services requested, (i.e., directory number is forwarded to a remote group of 5 lines - the customer can have up to 5 RCF services.).

The Company undertakes to furnish communications service in connection with one-way and/or two-way information transmission between points within the State of Missouri under the terms of this tariff.

Customers may use services and facilities provided under this tariff to obtain access to services offered by other service providers. The Company is responsible under this tariff only for the services and facilities provided herein, and it assumes no responsibility for any service provided by any other entity that purchases access to the Company network in order to originate or terminate its own services, or to communicate with its own Customers.

Applications for initial or additional service made verbally or in writing become a contract upon the establishment of the service or facility.

2.1.2 Shortage of Equipment or Facilities

2.1.2.1 The Company reserves the right to limit or allocate the use of existing facilities, or of additional facilities offered by the Company when necessary because of lack of facilities or due to some other cause beyond the Company's control.

2.1.2.2 The furnishing of service under this tariff is subject to the availability on a continuing basis of all the necessary facilities and is limited to the capacity of the Company's fiber optic cable facilities as well as facilities the Company may obtain from other carriers, from time to time, to furnish service as required at the sole discretion of the Company.

Any termination shall not relieve Customer of its obligation to pay any charges incurred under the Service Order and this tariff prior to termination. 2.5.7.3 Telecommunications Service Priority (TSP)

The Telecommunications Service Priority (TSP) program is a federally-established program under which the Office of Priority Telecommunications in the Executive Office of the President prioritizes the restoration and provisioning of telecommunications services - including services to private companies and institutions -- that support national security or emergency preparedness (NS/EP). The FCC defines telecommunications services under the TSP program to include the sending and receiving of signals or most any kind, by virtually any means. NS/EP services are those used to maintain a state of readiness or to respond to and manage any event or crisis (local, national, or international) that causes or could cause injury or harm to the population, damage to or loss of property, or that degrades or threatens the NS/EP posture of the United States. For telecommunications services enrolled in the program, the Company will provision and restore TSP-coded circuits, and provide TSP Special Construction services, under the terms set forth in this TSP service product description, and as required by the FCC's TSP regulations (currently at 47 CFR Part 64, Subpart D, Appendix A), and other applicable law. TSP services are in two categories: Priority Provisioning (including Emergency Provisioning and Essential Provisioning) and Priority Restoration.

Customers are subjected to the features, rate and charges as described in the Company's "Service Publication and Price Guide" (The Guide), located on the Company's website at www.mci.com.

2.5.7.4 Local Disaster Recovery

MCI Disaster Recovery Plans Service is an optional feature for customers of MCI Local Line and/or Trunk Services. MCI Disaster Recovery Plans Service is not available for circuits provided via UNE-P.

MCI Disaster Recovery provides MCI Local Customers with pre-established Disaster Recovery Plans to be invoked in case of a local line/trunk outage related to an emergency /disaster. Disaster Recovery can be defined as a collection of actions, procedures, and information that is developed, tested and held in readiness for use in the event of an emergency / disaster. For purposes of this optional feature, an emergency / disaster is defined as any event that may cause a lengthy disruption of the Customer's local line/trunk service. These events include, but are not limited to, natural events, accidents, or events of sabotage. The customer must notify MCI when to invoke these pre-established plans with a secure password. These pre-established plans may consist of specific restoration processes involving the redirection of traffic through Remote Call Forward Feature Service; or Trunk Group Redirection. More complex plans that involve over 100 numbers may also be established on an individual case basis. Changes or modifications to these plans can be made as part of the monthly recurring fee.

2.6 Allowances for Interruptions of Service

2.6.1 Credit for Interruptions: When the use of service or facilities furnished by the Company is interrupted due to any cause other than the negligence or willful act of the Customer, or the operation or failure of the facilities or equipment provided by the Customer, a pro rata adjustment of the monthly Recurring Charges subject to interruption will be allowed for the service and facilities rendered useless and inoperative by reason of the interruption whenever said interruption continues for a period of 24 hours or more (or for a period of 8 hours or more for customers of small business local service) from the time the interruption is reported to or known to exist by the Company, except as otherwise specified in the Company's tariffs. If the Customer reports a service, facility or circuit to be inoperative but declines to release it for testing and repair, it is considered to be impaired, but not interrupted.

For calculating credit allowances, every month is considered to have 30 days. A credit allowance is applied on a pro rata basis against the monthly Recurring Charges specified hereunder for Local Line or Local Trunk Service and is dependent upon the length of the interruption. Only those facilities on the interrupted portion of the circuit will receive a credit. There will be no credit allowance for service outages less than 24 hours in duration. Credit allowances for service outages that exceed 24 hours in duration will be rounded up to the next whole 24 hours.

2.6.2 Limitations on Allowances

No credit allowance will be made for:

- (a) interruptions due to the negligence of, or noncompliance with the provisions of this tariff by, the Customer, Authorized User, Joint-User, or other common carrier providing service connected to the service of Company except where contracted by the Company;
- (b) interruptions due to the negligence of any person other than the Company including but not limited to the Customer or other common carriers connected to the Company's facilities except where contracted by the Company;
- (c) interruptions due to the failure or malfunction of non-Company equipment;
- (d) interruptions of service during any period in which the Company is not given full access to its facilities and equipment for the purpose of investigating and correcting interruptions;
- (e) interruptions of service during a period in which the Customer continues to use the service on an impaired basis;
- (f) interruptions of service during any period when the Customer has released service to the Company for maintenance purposes or for implementation of a Customer order for a change in service arrangements;
- (g) interruption of service due to circumstances or causes beyond the reasonable control of the Company.

3.1.5 Local ISDN-Primary Rate Interface (Local ISDN-PRI)

Local ISDN-PRI is an alternative arrangement for individual local exchange services such as Local Trunk Basic and Local Trunk DID. Local ISDN-PRI is provisioned at the 1.544 Mbps rate via the Primary rate Interface standard of the Integrated Services Digital Network (ISDN). Local ISDN-PRI provides the Customer with the capabilities of simultaneous access, transmission and switching of voice, data and imaging services via channelized transport.

3.1.5.1. Local ISDN-PRI Service Arrangement - One or more Service Configurations can be combined to create an Local ISDN-PRI Service Arrangement. Customers may have multiple Intellispan PRI Service Arrangements per location, however for each Service Arrangement one Service Configuration 1 must be included. The controlling D channel will always reside on Service Configuration 1.

The ISDN Digital Facility is ordered separately and not included as part of the Service Configuration.

The D channel is a 64 Kbps channel that carries signaling and control for the B channels. The capabilities of the D channel are contained within the customers Service Configuration.

3.1.5.1.1 Service Configuration 1 - The first Service Configuration for any PRI Local Service Arrangement must be a Service Configuration 1. Service Configuration 1 provides twenty-three (23) 64 Kbps B channels and one (1) primary 64 Kbps D signaling channel. The primary D channel is an-out-of band signaling channel used to control and route all of the B channel traffic within the PRI Local Service Arrangement.

3.1.5.1.2 Service Configuration 2 - This configuration is only available in conjunction with Service Configuration 1. It provides an additional twenty-four (24) 64 Kbps B channels which are controlled by the D channel on Service Configuration 1.
