- a. The time when connection is established, as provided in paragraph 2.3.3,C.2.,b following, determined in accordance with the time, standard or daylight saving, observed at the location of the rate center of the calling station, determines what rate schedule applies. When the connection is established in one rate period and ends in another, the rate for each rate period applies to the portion of the connection occurring within that rate period. In the event that a minute of use is split between two rate periods the rate in effect at the start of the minute applies.
- b. On All PRO WATS in Missouri dial station calls, chargeable time begins when connection is established between the calling station and the called station.
- c. Chargeable time ends when the calling station "hangs up" thereby releasing the network connection. If the called station "hangs up" but the calling station does not, chargeable time ends when the network connection is released either by automatic timing equipment in the telecommunications network or by the Company operator.
